under their hat, out of the people that still hang here?
Probably Martin, yes? He might've even had that title before,
even when T-Man was still posting... I know Shania & "Boot
Scoot" got a lot of spins, but for awhile there you couldn't
turn on a radio anywhere without hearing "I'm all out of love,
I'm so lost without you, I know you were right...."

I wanted to email you about the DBX upgrades, but it keeps getting returned.

thx,
bHey Gene!

try the container store or equivalent. They had a container store at Sun Coast Mall in Orange county CA., I remember seeing aluminum, mic sized cases, aluminum briefcases and larger aluminum cases that had the pre cubed foam in them. they were all under \$20.00. You Just rip out the foam to fit what you need.

Most cities have an upholstery supply house that has all kinds of foam, plastic and vinyl covering. Here in Michigan we have a place called Foam Factory 586 795-3626 They will cut to size and thickness. They even have a cutting machine that will take a sheet of foam and cut it down the middle in that

diamond or wedge pattern they use for acoustic panels for studios.

I picked up one of these:

<http://tinyurl.com/efcbf>

Which fits my larger than normal camcorder perfect. (Sony wants \$400.00 for a similar but lined case.)

I checked two local upholstery supply houses, but they only had soft foam rubber, which will not protect the camera like the dark gray dense foam.

would be perfect if I can find a modest amount (24X24X1).

Thanks for the input.

GeneThe range my house, where I have my DAW in one room & my regular PC (the one i'm typing this on) in an office adjacent

to that is about 10 feet through a masonry wall or about 15 feet around the wall through the door - however the signal is being received. I know this because if you have both computers on, when you're using the mouse on one of them, the other will receive the signals, as well. Not a good thing, obviously. They're both Logitech mice - errr - mice. I have no idea if they're both transmitting on the same frequency or if they're just close enough to each others frequency to make that happen. Not usually a problem, since if I'm using one computer, I'm not using the other at the same time, but if my daughter wants to do something for school while I'm on the DAW, she's got to do it on the laptop, otherwise this PC's mouse starts moving my cursor around & vice-versa.

>You might want to consider Kensington. I use the Expert Mouse PRO, it's a track ball. After using it for a week or so, there was no going back to a mouse. I also use a Macally track ball. I also have many different mice, including a top of the line Microsoft wireless mouse. I rarely use it, I will say that it is vary smooth, but it kind of eats batteries.

Here is a link to Kensington's Expert Mouse Wireless. <http://us.kensington.com/html/4136.html>

I think if you try a Kensington track ball for a while, you won't want to use a mouse.
