-----=_NextPart_000_0015_01C62067.416869C0--Check www.audiomidi.com for pricing for the UF series - haven't checked on the new CME products. I also suggest trying one before buying (UF8 at least). Not my favorite action on the weighted controller, but they have a good idea going for inexpensive controllers, and otherwise, it worked fine.

uot; Needless to say it didn't.

What is the solution?

I haven't been frustrated in a long time. This is taking the cake.
TIA,
Tom

So true...I hate quasi-masteringThe further along this mix gets, the more the client is saying things like

"ya' know", this is sounding so good to me that I think I'm going to get
this or that song to *so-and-so*. All of these so-and-so's are DJ's he
knows on indy stations/ NPR affiliates.....and one of them is program
director on a major commercial station. He's got a lot of connections and
family clout. I don't know if he has *that* much clout
or if any of this will happen but if it does, my name is going to be all
over this thing...recording, mixing and mastering engineer plus executive
co-producer...so I'm sweatin a little here.

;o}

It's when the client, who has no fucking clue as to what they are doing insists their \$0.02 are absolutely right and as the hired help you are obligated to acquiesce...while quietly (but quickly) removing your name from every aspect of this abomination. ARGH!

Don

Hey Tony! I'm hip to all that, that's how I've run paris in the past. I'm

just wondering, is there a way to install Paris 3.0 on a FireWire drive and

get it to run. I'm thinking not, but it doesn't hurt to ask.

>On the PL, I just open it up to default and crank the input gain. that's all
there is to it. The secret is getting everything properly balanced in the
mix so that you don't have to do anything else but just *turn it up* until
you start hearing compression artifacts, then back it off until it sounds
as open and natural as it did before you hit it with the PL.

>>>You can apply as many tracks to an aux channel as you want in a Paris submix and you can also gain stage with the aux send/return. Since I've never done this, I can't speak to the panning aspect of it, but I would think that if you have your fader levels and panning applied in Paris, the auxes set to stereo and center panned and the input channels on your mixer panned wide L & R, then your mix panning in Paris might be preserved (because if you're using auxes, this is where you're going to have to do your panning....in Paris).....but then, you're not controlling your individual track fader levels and panning on your outboard mixer. This might be a problem, depending on how much control you want. If you're just using the mixer for summing and you don't have enough inputs to handle anything but a few stems, I can see doing this. You will have to monitor everything through the outboard mixer, obviously, unless you are feeding everything full on through the auxes and this is where you might run into some major distortion with your stems since the aux sends/returns are gain stages that can be overdriven. If you output 1:1 through the Paris inserts into correspon

Trying to do this on a single nonDSP system is like not expecting a horse to kick you in the mouth whilst standing behind it smacking it on the flanks.

You know what's coming and it's not realistic to think it won't smart :)

Natives have come a long way, but not that far yet.

Any way you cut it there is a set amount of cash you have to lay (be it extra hardware or extra computer equipment) out to be hassle free or you'll have compromises.
