You mean the same cube spin transition OSX uses when you switch users?
It's nice eye candy for sure. But the basic multiple desktop feature has
been around in other operating systems for decades - various flavors of
UNIX, on the Amiga, I think, and BeOS. Good stuff.

If Apple doesn't postpone again, the update should be out in a couple of
weeks.

Cheers,
-Jamie

Yeah it was something like that. No dispute about who had it first. I was just saying that according to an article it's been under the hood for awhile.

They also talked about third parties developing different ways to use the technology. To my knowledge, there has been software that can essentially do this for a long time. I think there are links on Doug W.'s FAQ page for third party software???

Yep. I've seen several 3rd party hacks to add this to OSX, but haven't been willing to risk any problems with system stability using them. I've been waiting for the integrated version from Apple. Shouldn't be long now...
