incorporated city which was surrounded by Austin. It was named Westlake Hills and over the years it became a very desirable locale for both extremely wealthy folks and still had it's share of hippies living in the woods along the river that ran through the area. There were a couple of restauranteurs in Austin at the time named Cookie and Joy Swanson who didn't live too far from us and Cookie's brother owned a nursery in Westlake Hills that sold plastic pink lawn flamingoes. Well as the years passed, people like Tommy Lee Jones, Shawn Colvin and Sandra Bullock all moved into the neighborhood and then Michael Dell built a \$65 million dollar obscenity about a mile down the road and brought along all of his Dellionaire friends. The property values skyrocketed and the politics started getting a biterrrrrr....Reagan'esque and PC at the same time. The city council eventually was set upon by the rich developers and landowners to pass an ordinance banning the display of pink

lawn flamingoes. Well, about two weeks before this ordinance was to go into effect about 70% of the the citizenry of Westlake Hills started making a run on Cookies brother's nursery and every other nursery and any other spot in Austin where you could get pink lawn flamingoes and by the day this ordinance was in effect, there were thousands of them all over the little town. Eventually this all died down and I'm not sure if the ordinance was ever taken off the books but this kind of rebelliousness was the kind of thing I loved about Austin and was fast disappearing by the end of the 90's. I was pretty much ready to sell my place by 2000 when we moved to Durango. My property taxes had gone up to around \$1000.00 per month due to the numerous gawdzillionaires living in the area.....and upon arriving in Durango, who do you think the first people I ran into were????.....Cookie and Joy. They opened a restaurant here about 6 months before we moved here. Now a substantial part of the old Austin crew hangs out in Durango and we all sit around and talk about the good 'ol days.....and nobody really misses Austin We just miss what it used to be.

It's a wierd world sometimes.....just look at what lawn flamingoes can do.

;o)

>Dedric,

I've got a buddy with a studio in Midland TX who is a Samp guru. I'll do some investigation into it's capabilities. He's as much a Samp fanatic as I am a Parasite. Don't Mark Wilson and Bill Lorentzen use Samp as well? I thought I had seen posts about it from them.

to this web site. I always wanted to know the difference between Turntablism
and Glitchcore. Now I know.

Be warned. This site claims that electronic music started in 1982!

<http://www.di.fm/edmguide/edmguide.html>I know Bill uses Samp at least. I believe Sakis uses Sequoia for mastering.

It doesn't have the midi bells and whistles, and 8.11 doesn't have the most elegant handling of VSTi outputs and tracks, but I think 8.3 has changed this with folder tracks, and hopefully a few other improvements.

or a solution that you can hang or drape,
then theater curtains (usually these are VERY heavy) work well,
IMO... I did some production work at a PBS tv station some
years ago & they used these for studio partitions, so I can
personally attest to their effectiveness. Only problem is,
they're so thick & heavy you have to have a very well-
reinforced hanging system. Also, while they're very expensive
to have made, if you can find someone who does want to get rid
of a set, you can often get them for next to nothing,
because if a theater or a school has replaced theirs, the old
ones are usually just sitting around collecting dust.

Check the TV stations in your area that have a newscast or
other large studio area... it was a very common old-school
method of partitioning one portion of the set from another,
before many stations went to the "open newsroom" on-air format
that's much more prevalent these days.

However, if you ARE just looking to cut down on some reflections, flutter echos, etc., from walls & whatnot, IMO a much more attractive alternative to the moving blankets would be something like this (go to this site & look for "wallhangings" under "Products"):

<http://www.elpasosaddleblanket.com/>

Now, those guys are wholesale-only online, but if you see something you like, I can go to their retail outlet here & buy it for you & have it shipped. A few of these things on your walls will look a helluva lot better than moving bla

sert foot.

With the cRapCo cable (as they will now be referred to) the low B just tapered off and out of existence by a good 3 -4.5 dB by the time I hit it open. Same amp, same speakers, same bass only through the MBC... let's just say that Johnny 5 is alive. Wow. Smooth, no taper, no fooling on the top end and plenty of meat all the way down. This is an active bass girls and boys - that's not supposed to happen to my knowledge/experience.... I am going to test out with a passive bass asap, and if I find what I think I might, my wallet is about to empty in favor of tone toys. I've tried the monster stuff before, it didn't do this to my brain or ears.

Anyone else had this experience??

AA

I choose Polesoft Lockspam to fight spam, and you?

<http://www.polesoft.com/refer.html>I'm still not sure if they're serious or not. If they're joking, they don't seem to be letting up. ;oS

Scary if they're serious... ;o)

Cheers,
Kim.

>Well.....I have totally recabled my studio with Mogami over the last 12
months. I had been using lots of Horizon and Rapco in the signal chain
before this.
The Mogami made a big difference. I'm still using a 100' Whirlwind Medusa
snake from my tracking area to my preamps though. I got it out of a club
install in NYC. It's an old one too.....made sometime in the 70's, but I
swear it sounds better to my ears than running Mogami mic cable directly
from the preamp, approximately 40' to the tracking area. I have heard that
these old Medusa's used high quality Belden cable. Whatever it is, it's a
nice sounding signal path, but maybe I like it just because it's old and
discontinued, like me and half the stuff I use in the studio.

Go figure,

Deej

Iready found a long block for \$2800.00 (I return the core in the shipping crate) with a 3 year warranty. I've also found another one with 40K miles for \$1300.00. I know that there are other issues that *always* come up and that it's always a crapshoot to do this, but this puppy is paid off and I like it better than the new trucks I've driven recently (Dodge Durango and some Ford thing that I can't remember the name of). Dropping \$3k to get a few years more out of this truck would be fine by me. I've not really spent anything on it in 3 years other than for routine maintenance. I know guys in this town who can literally yank the engine and install a rebuilt engine in 8 hours. They are the best of the best and are on permanent retainer to maintain multimillion dollar engines that power the big Halliburton equipment that is used in drilling and completing gas wells. One of these guys has a complete machine shop and could probably just fix it better than it was when it was new. He also repairs farm equipment (those giant, incredibly expensive harvesters/combines/baling machines) and just about anything you can think of. He's got it all and could repair something like this blindfolded.

;o)
