Hey bro. first of all, I'm really glad this isn't some sort of life threatening situation. I understand your frustration though. I can't help much on the prosthesis info but years ago I broke my right hand and wrist. It pretty much screwed the pooch as far as my playin went because I really couldn't hold a pick worth a flip anymore. I looked into a lot of solutions and found some pretty amazing picks. The Fred Kelly Bumblebees worked pretty well for me back when I was gigging in Austin a while back.

<http://www.fredkellypicks.com/bumblebee.html>

Good luck amigo. Be sure to mount the portion of the digit that is removed on a board and hang it in the living room like a trophy bass so you can discuss it with the grandkids.

;o)Sorr

Tom, at this point I'd entertain sending that entire rig to Chris =
Ludwig, pay him for his experience/expertise, so you can get on with =
your life. Seriously. Life's too short bro.

Another thing,
My Magma has not only the 20 pin mobo power connector
but 3 x hard drive type connectors that go to the Mobo.
Not sure if this means anything.

Most Excellent Fix It Guys,
New problem. Just installed a new Antec 550 watt supply.
Powers up nicely in the Magma. It will run with 5 EDS cards
then shut off just before XP boots and screws the who
