In case you're interested.

;o)Please. You may be very good at what you do and you may also be somewhat lucky, but to imply that any competent IT professional with a little bit of knowledge can stop all worm and virus problems certainly makes the rest of the world look dumb.

From this article:

<http://www.cnn.com/2005/TECH/internet/08/16/computer.worm/index.html>

CNN) -- A fast-moving computer worm Tuesday attacked computer systems using Microsoft operating systems, shutting down computers in the United States, Germany and Asia.

The director of Microsoft's security response center, Debbie Fry Wilson, said the computer giant was in an "emergency response" mode. "Right now, we're mobilizing our two war rooms," she told CNN.

At any given time there are thousands of computer worms and viruses in existence. Last year, the Sasser worm shut down millions of computers worldwide (Windows

all on the same Mac in 2 years - not a great record for quality parts. There is more to the story than the single argument about viruses, and that's my main point. I'm always keeping my options open, and may move to Macs at some point if it makes me more efficient and/or profitable, but comparing the performance vs. cost is a big deal when I can build 2 PCs for the cost of 1 Mac, with identical hardware, and get double the processing capability (or more) by doing so. For what I do, that's not a trivial point. And, imho, that's the biggest hurdle for Macs with pro audio PC users, not virus susceptibility (when that is a known, as it is now) or nice looking GUIs - just simple power vs. cost.

If I could access the German Keys mag report I would post the results as it apparently found that OSX isn't exactly as fast or low latency friendly as WinXP, even under Bootcamp, but I don't have numbers to confirm, and that's 2nd hand info. That's where the rubber meets the road for me and a lot of

other audio-PC users. I don't know too many people that are in love with Windows (I'm certainly not) - just getting the most for our money. Until Apple takes interest in that side of the equation, MS will continue to dominate the market in general. I would have no problem switching if I truly would get more for my money with a Mac running my given applications (no, Bootcamping XP isn't a feature when you pay several hundred *extra* for BIOS locked hardware to have it).

Just my .02.

Regards,
Dedric

Lol. They couldn't afford me..... then again... I guess they could. ;-)

It wouldn't hurt if Apple just released OSX....but maybe they are afraid of what guys like us would try to do with it. ;-))

Hey - curiosity question - why are there so few retail outlets that carry Macs? I know Apple went through the 3rd party thing a few years back and wasn't happy with the results - was that a

deciding factor, or is it just that the Staples and Office Depots of the world have deals with Dell, HP, etc? I know CompUSA carries Macs, but other than that and the Apple Store (of which there isn't one in Co Springs) and online, coverage seems rather limited - almost a "find us if you can" approach. Coverage is a big part of a product becoming popular, though obviously it can be rather expensive and risky.

Regards,
Dedric
