figured out except on how to find and move the custom presets created using
Drumagog.

Anyone come across something like this?

I can find and easily (almost easily) move all the custom presets for something
like Waves RCL, it lets you load/save/import/export, but Drumagog doesn't
seem to have any of those options.Nice stuff! Good-sunding recoding, and yep - a rippin' solo, too.

The first couple of riffs remind me of a section of the solo in
that Megadeth tune "Symphony of Destruction".
