As a Life flong Giga user, I can honestly state,that your best bet is to  
Get NI Kontakt 2.x..

Kontakt can play back your Giga programs, AND even convert them (super easily)  
inside of it's app.!!

As well as, you can use Kontkt as a regular VSTi inside of Cubase instead of havig to deal with Rewire( Which is just above OK ) in the Steingbege apps..Surprisely (Rewire) implemented very well in Pro Tools (M-Powered,LE, HD).. Who knew!!

I even purchased he new Giga VSTi (GVI) and it's just a little better than Giga 3.. Native Instruments have really done a bang up job with Kontakt 2.x..Smooth.. AND it can stream from disk..

>ChuckI think about 10 out of every 10 Giga users I know say the same thing about  
Giga - get Kontakt (or at least something besides Giga).

I don't use Giga, but will second Lamont's suggestion for Kontakt 2 - excellent sampler, and it does load Giga files as easily as native Kontakt files.

Dedric

>ChuckI had this problem and baked the tapes myself. It's not that scary!  
I used a large cardboard box, (with an improvised small diameter  
platform to allow circulation), an electric fan heater with 3 speeds, (placed  
outside the box, you can adjust the temperature  
by placement), and a laboratory thermometer suspended through the cardboard  
box, affixed with blu-tac so the mercury is near the reel).  
Worked like a charm.  
Don't try to play the tape prior to baking. (contrary to what is

said in one of the articles below.

<http://www.tangible-technology.com/tape/baking1.html>

[http://www.josephson.com/bake\\_tape.html](http://www.josephson.com/bake_tape.html)

you can try simply unzipping  
the file & moving the .dll file to your vst plugins folder &  
see if it shows up.

Ohhhhh, man... you are gonna shit. yer. pants!!! Hang on a few &  
I'll post the link on a new thread... almost done with this.

:D :D :DReady? Got diapers handy? OK, let's DO IT!!!

Below is a link to a sort of "mashup" I did between a song I  
recorded & mixed (that I think most of you have heard) and a  
typical heavily-compressed Mike Shipley-mixed/Ted Jensen-  
mastered tune. Now, ths is not a diss on Mike Shipley, who's  
got more platinum records on his wall than I'll ever have in 27  
lifetimes, but it **\*\*MIGHT\*\*** just be a diss on Ted Jensen and  
others who master like he does... well, he's got more platinum

than i'll ever have too, but nonetheless CHECK IT OUT! Here's the deal:

1.) The file for "Panophobia" is a mixdown exported/rendered direct from Cubase to hard disk; it was originally recorded at 24-bit 88.2k, and mixed down to 16-bit 44.1k. The 16/44 stereo file was then imported back into a new project in Cubase, as was the comparison song. No big deal - nothing weird or tricky about all that.

2.) The file for the comparison song "Godspeed" by Anberlin was imported directly into CubaseSX from CD, digitally imported right from the onboard CD drive. No samplerate/bit

[View Forum Message](#) <> [Reply to Message](#)

---

rate  
conversions were needed on either file as the new project was set up as a 16-bit/44.1k project.

3.) Both songs were on separate stereo tracks in SX set at "0" gain. The Master was also left at zero. NO effects, EQ, plugins, or anything like that were used on either the master or the individual tracks in the comparison project that contained the stereo song files... all I did was snip & move.

4.) I exported to a hi-rez (320kbps) mp3 file - this is PLENTY of resolution to be able to hear the differences. It's about a 2 1/2 minute long file, so it's not dragged out or anything like that.

Here's the link... listen to how the DiMakina tune is VERY competitive in volume to the fully-mastered major label release, yet it's clearer, innit? Make sure you listen to the whole thing, as there are a couple of SIGNIFICANT differences right around the 2-minute mark/slightly thereafter.

<http://saqqararecords.com/MiscAudio/VolumeWithClarityExample-Comparison.mp3>

Hear all the high-end distortoshit up there in the Jensen-Mastered piece? IOW, the stuff that's NOT there in mine? This is what I've been trying to avoid, while acheiving competitive volume levels, and I think I've landed on it now!

Comments welcome.

NeilOk.. Neil, I think you hit your Sonic Nirvana. Very clear, but with in your face volume.

I still dig the Anberlin Mix. I like it's use of stero delays and verbs. As for the Mastering, the top end distortion, i think makes for the overall sound of the mix. It's not overly distorted, rather very smooth distorted which , to me makes the mix sound well. I like good distortion. A little dirt is good for a mix in that genre.

>Inquiring minds wanna know... what's your typical track count  
>and dB settings?

Track count on the DiMakina stuff was mid-20's to mid-30's, depending on the song. I don't recall specifically what it was on that particular song, but I can check & let you know if you want. I know it was something like:

Kick  
Snare  
Hat  
Toms L  
Toms R  
OH L  
OH R  
Bass Avalon 737  
Bass MP2NV/Distressor  
Guitars = probably about 8 to 10 tracks altogether (various parts coming in & out, everything tracked in dual-mono, with some things doubled).  
Vocals = 7 or 8 tracks, as I recall (same kinda thing - various parts coming in & out, two different singers using two different mic & preamp setups on each one, some parts doubled, yada, yada, yada).

So I guess that'd be 24 to maybe 28 tracks on that tune altogether.

Not sure I know what you mean by typical db settings...  
do you mean on specific channels, or RMS/PRMS measurements on the 2-buss, or...???

If you mean on the 2-buss, I was able to get this song up into the mid-to-low-4's PRMS... like around -4.3 was the hottest part, as I recall. Mostly it was in the -4.7 range, PRMS. Again, I'd have to re-check it to be certain.

IOW, finding a way to get that competitive volume WITHOUT the usual inherent distortion - you don't think this represents a major accomplishment? Geez, I do! :D

NeilDJ I really like the Neve 88rs too. Unfortunately, this new version of the UAD software broke the ability to render plugs in Paris, at least for me. I couldn't get anyone else to respond that uses it in Paris. I'm not quite ready to start mixing in cubase yet so, I can't decide whether to ask UAD if they can de-authorize me for the 88 RS or not. bummer

>something you're diggin on though.

OK, one more time... look, I am NOT comparing mixes in the sense of saying: "ooh, my mix is better than that one"; I like that other mix a lot - fact is, though, it's got that typical modern rock, overcompressed mastered-in dirt in the quest of loudness. The ONLY comparison I was making between the two - and it IS a fair comparison, because it's a straight a/b "which sounds louder" comparison - is that mine is equally loud, if not louder in similarly-structured sections, and furthermore it's loud WITHOUT the dirt/grit/distortocrap.

Now, if you've found a way to achieve getting into the mid-4's PRMS range prior to this, all the while keeping it clean & clear, then goody on ya, but I - and I know the same goes for just about everyone on this NG, because we've had any number of discussions on this very topic - have not. So, that's the pants-shitting part... that I've found a way to do it and am telling everyone here what I used in case they want to try it.

Why do I even fucking bother with this sort of thing? Seems like every time I do, somebody comes along & crashes the party, saying this or that comparison was unfair for one imagined reason or another. Does anyone else feel the test was "unfair"? If so, just convert that mp3 file to a wav & import it into any application you have that you can insert whatever plugin you use to measure RMS & PRMS. You'll see that the segments of the file that contain my mix will measure around the -4.3 to -4.7 range PRMS in the loudest places; that number can't be faked, manufactured, or otherwise manipulated - it is what it is.

Geez!

NeilJust wondering if anybody had any thoughts on Stewart power amps, I'm looking at a Stewart PA-50B. I'm thinking about using it to power some small reference speakers. You can't copy and paste settings from one channel to the next? What a POS!!!! "Neil" <OIUOIU@OIU.com> wrote in message news:46ddfca5\$1@linux...

Unless you do the same thing summing the mix of both songs on an SSL with a Fairhampster 670 strapped across the mix buss and set to stun, then you've proven nothing.....haven't you learned this by now ?????

;oDI assume you are trying to copy channel settings (ctrl-c, ctrl-v) and the channel's notepad text isn't copying over - yep, not working.

The channel settings (inserts, etc) do copy over fine though. Correct?

What I really want to do is bitmap those templates you made for me into the Notepad section with an option to expand them to full size, then have a draw tool that will allow me to mark the settings, save them, then save the .bmp to the notepad field. WTF won't it let me do this?? What on earth were they thinking when they designed this pile of doo doo?

;o)You mean right click, "Save selected channels", right click, "Load selected channels" doesn't work?  
;-)

think my confidence can go any lower.  
In fact, I'm sure of it and with both dems and repubs sucking so bad it's  
a trifecta in play ! Go fark !Attention Everyone:  
Just want you to be aware there is a dangerous virus being passed around  
electronically, orally, and by hand. This virus is called Worm Overload  
Recreational Killer (WORK). If you receive WORK from any of your colleagues,  
your boss, or anyone else via any means DO NOT TOUCH IT. This virus will  
wipe out your private life completely.

If you should come into contact with WORK, put your jacket on and take two  
good friends to the nearest grocery store. Purchase the antidote known as  
Work Isolating Neutralizer Extract (WINE) or Bothersome Employer Elimination  
Rebooter (BEER). Take the antidote repeatedly until WORK has been completely  
eliminated from your system.

You should forward this warning to five friends. If you do not have five  
friends, you have already been infected and WORK is controlling your life.Went and saw Colin  
Hay (former lead singer and songwriter for Men At  
Work) the other night.

Now, I was never a MAW fan. Didn't hate them, just never really got  
into them.

But I heard one of Colin's solo tunes, and really liked it, so I gave it a shot.

Wow. I was blown away. Amazing songwriter, still has the voice, is very personable on stage. I instantly became a fan. Picked up the three cd's he had there that night, including one that had the acoustic version of "Overkill" that he performed on "Scrubs".

Talked to him afterwards, got his agent's phone number - going to try booking him solo for our new concert series.

He was joined on stage by his singer/dancer/wife, Cecelia, a stunning Peruvian woman with substantial, uh....errr.....well.....maracas. Enjoyed seeing her perform with them on stage...and those little shaker-things as well.

If you get a chance to see him, either with the band or solo, definitely do it.

pabNice to see that y'all can fight without me even being around.

Hate to think the place has gone soft....

DC

John,

You obviously missed the tongue-in-cheek to all of this. If I sound like a 3 year old, then I submit that you are sounding like you are on the Cubase development team and somehow cannot tolerate any criticism of your beloved code.....so I would say that a chill pill would definitely be in order on your end. What is with your emotional investment in this? What should you care? Do you own stock? Do you think my comments here will cause Steinberg to stop development? I have been having a little fun, not threatening to sue them on a public forum as did some of the members here years ago when the Paris developers were posting to this forum. Those posts were instrumental in our loss of communication with Edmund and SSC. When I see the owners of Steinberg post here (or anywhere) with personal tech support like Edmund and Stephen did here, then I'll shit in my hat and wear it.

Cubase sucks..nya, nya nya nya nya.....

>fader during mix down? as not to overload bus right ?

I'm talking about that's where I start the individual track channels out at, not to "keep" them there. Obviously, you gotta move 'em as you mix! And yes, part of the reason for that is to not start off with an overstuffed mix bus. The analogy I use is that if you're using an analog console, you wouldn't start off by pushing all your faders all the way up, would you? No - 'course not. So why would you start off all your DAW channels at zero, or what is essentially "all the way" up in the digital realm?

Paris being the exception, of course, since as we learned from Chuck awhile back, in Paris "zero" is really "minus 20".

Group channels for EFX & whatnot, and also the Master - those I leave at Zero.

>since switching from paris to sx , i have been frustrated with

>the tendancy for the buss to get distorted at the slightest

>push .

Yeah you can't push it, that's for sure - it's not like Paris or like most analog consoles... you've got to get your glue elsewhere.

>again , just wanted to tell you i like the sound your getting-

Cool - thanks!

I think the scary thing is that there are supposed to be protocols that will prevent this kind of thing from EVER happening, no matter what. The missiles were supposed to be transported without the warheads, even if they were inactive. That said, I'm not especially concerned by this if it's happened once in sixty or so years.

As far as San Fran, I guess we can only hope that someone with highly evolved (and stridently hetero) morality like Lot would have survived the nuclear destruction by offering his daughters up for a long night of gang rape! Them's some family values.

-----=\_NextPart\_000\_0036\_01C7F0B8.71EA07C0--I guess it would depend on your criteria for worseness, and I suppose the usual criteria would be things like competence, corruptability, leadership qualities, and legacy. History book type evaluations.

Here's why I myself consider Bush (and his administration) the worst ever:

1. His ignorant, ethnocentric, machismo Middle East policies have put our country in far more danger than we were in prior to 9/11. Not only are we more hated than before, but even some of our friends and allies have backed away in a sort of frightened pity, like you might feel for a wounded bear. Terror attacks have increased steadily around the world since the Iraq invasion.

2. He would rather continue to let more tens of thousands of people die needlessly than admit defeat, all the while completely unable to begin to define what "victory" is. I can tell you what victory is: get those dirty brown Muslim feet off our oil. But they won't tell you that.

3. Tens of thousands are already dead or maimed, and all for a lie. Yes, I said a lie. Not a mistake, not bad intelligence (unless you're talking about their brains), but an intentional deception . . . a lie. The lie, of course, is that invading Iraq and anything to do with 9/11 or anything to do with the "war on terror" at all. The truth is that before the sun even came up on 9/12/2001, Rumsfeld, Wolfowitz, Cheney, "Condi", Bush and all were working out how to take advantage of this national tragedy to promote their Iraq agenda. Don't take my word for it, Richard Clarke was

Who thought THAT was a good idea?

Looks pretty fragile for something meant to go on the road.

Probably sounds nice, though.

Cheers,

>Jeffis there a price or is it still beta ? have you heard it ?don't give them rough mixes and tell them Mutt Lange spends two weeks on each song and ask them if they would like to have half a billion dollars too?The compressor / limiter sounds immediately better than the cubase one to me and is very smooth. There is noise while adjusting settings like most plugs but the sounds is nice and smooth.show them this post.

they are really very nice. Spacer is a super smooth reverb and the exciter  
is great on vocals.

I'm not impressed with the limiter though. And other effects like Monster  
are hard to figure out without a manual. It helps to know what they are  
emulating and then go lookup the manual online if possible.good one! seriously  
rod

From what I hear they're impressiveSmokin' hot mix, Rob. Great recording, performances, and final production. Only negative - a tad light on the cowbell. See if you can bring that up in the mix, please.

>  
>Rob  
>Yes.. Saw this way back on gearslutz. Looks great. letr's hope that it sounds as good. Also, it seems that this company (Overloud) has some very exciting loss-less compression technology that will be bringing to other products like softsynths and samplers.

All in all, i think the 3 year lull in DAW technology has finally come to and end. Being that some of these companies big and small have figured out what to do next. Their biggest hurdle will be adapting to 64 bit technology.

"zmora" <docent191@wp.pl> wrote:

>  
><http://www.overloud.com/en/products/Okay> fam, I just read a very interesting article in July's 07 SOS (Sound On Sound -What The Devlopers Think) about the state of MS Vista AND is it time for (Them DAW manufactuers) to go 64 bit.

Well, the article featured most of the heavey hitters in the industry (RME, M-Audio, Native Instruments, Steingberg, Cakewalk, Lynx .

As far as 64 bit in the DAW most , except Cakewalk, feels that it's not needed. But, you get the feeling that they say this because of the work involved. Secondly, They're not impressed(except Cakewalk) with Microsoft's new built-in audio hooks (WaveRT).. RME stated they would stay with ASIO, and Not Adopt the Vista standard..

OK. Rant:

When Apple completly re-coded their OS witha NEW Audio engine standard AUDIO-Units. At that time, ASIO, WMD & MAS where the NAtive standards, but Apple went their own way. So what did the Developers do...They started coding their apps, plugins, audio interfaces with Auduo-Unit drivers.

Now, that Microsoft is proposing the same thing, these very same companies are balking. Why? Even with Lower latency and less pull on the CPU,like Apple's Audio Unit design, their balking.

Next point:

To all of those who state the only useful purpose for 64 bit is to break the 4 gig memory limitation (for Samplers) in Bull!

The problem is that the DAWs are all using 32 bit coding. #2 bit apps on a 64 bit os and processor will only get you marginal gains...But, A True 64 DAW/App using a 64 bit CPU,64 bit plugins we we see astouding gains in performance.

I'll stop now. But, we need to let the manufacturers know (what they already know) and that is the Windows train is moving and even if Vista is not the OS, the Next version will be the right one and it will be 64 bit.. Companies like RME & Steinbergs will get left behind if they don't start moving in that 64 bit direction).

To may of us have Pre-Invested in 64 bit CPUs with the promise of 64 bit processing. Apple will be there soon with OS-x 64 with a newly re-wriiten version of Logic (64 bit). Digi and Motu will be on the 64 bit train as well..Chooo choooooo choo...This is a tricky on Gantt. I've run into this before. Now, I just make project arrangements beforehand so that it doesn't happen. Letting the roughs go is cheaper for the client, but you will potentially look better (advertise your talents/studio) - and them too!!!! - if you can "mix" them up. I would just talk to them and explain it best you can - but if they can't hear the difference OR think it's worth it, then it's not gonna be in your interest to hassle them about it, and you should just let it go. Maybe ask them to give you proper credit that perhaps mentions that it wasn't mixed.

good luck,  
-Carl

>  
> GanttTwo things. First, when Apple built (or stole and modified) OS X they made a quantum leap in the quality of their OS. 9.x was years behind, say, NT 4.0. Apple also basically forced everyone to go with the OS X, and there was a lot of bitching in the hardware and software communities about updating apps and drivers.

Second, where is the evidence that a 64 bit (integer) OS vastly improves audio performance? I haven't seen it, and since FP processing has been capable of using 64 (or 128) bit words for years now I'd be interested to see where the quantum leap in performance comes from.

With 2 EDS cards, you do a criss-cross with the provided "x" cables. The instructions are pretty vague when it comes to more than two cards.

With three cards, you chain the output from one card to the input of the next card in line. Got it.

Now, do you run a cable from the output of the last card in your chain back to the input of your first, master EDS card???

This is where the instructions are vague.

Thanks in advance,

ChrisI read the article a while back, and I think there are multiple sides to this:

1 - Vista isn't great for low latency audio. WaveRT is still, afaik, just a marketing feature, not proven in reality for pro audio.

2 - Cakewalk has staked their marketing on 64-bit in order to attempt to separate themselves from the market. Reality is (or so it seems from tests I've seen), there is little advantage for the audio engine, and for the OS, memory access is the main advantage. 64-bit apps in a 64-bit OS can gain some performance gains, but so far that appears to be minimal).

3 - Apple hasn't really worked for, or to the advantage of DAW/audio developers, except their own (Final Cut Pro and iTunes/QT/iLife being their main interests here, with Logic running a distant 5th, or 10th). Core audio is likely a 30% technical decision (easier to implement than someone else's protocol), and 70% product control - what you develop yourself, you can market, control and use to differentiate your product. ASIO is perfectly fast, and stable on WinXP, but it's Steinberg's protocol, not Apple's. For example, direct monitoring still isn't supported by most hardware or software for OSX, and was questionable for core audio (whether this has been slow to develop, or slow to release the SDK for, I don't know) - even Logic doesn't have it. Apple just isn't interested in supporting 3rd party audio applications or protocols for the Mac purely because they have a direct vested interest in their own, and in selling more Macs.

Developers adopted AU and Core Audio because they had to in order to survive - most of them already had Mac products they would simply lose if they didn't. Notice that some developers that didn't have Mac support, never moved to AU (Voxengo for one; Algorithmix, etc). It was a forced decision since VST, ASIO, etc had been dropped, just as Logic 5/PC was - if it doesn't make money for Apple, it is unceremoniously canned. With Vista, VST, ASIO, WDM all still work, so developers aren't buying Microsoft's pitch to move to their own internal driver/protocol. I believe at least one of the developers in that article expressed reservations over trusting their product to a protocol (WaveRT) that was held by an OS developer that had no direct interest in professional audio (sound familiar now? They've learned from the Apple experience, and past Microsoft experience - DirectX for one).

I think the moral of the story is that pro audio is best handled by developers in that market, not companies more interested in selling operating systems, home computers, and/or iToys.

Regards,  
Dedric

Sometimes You guys kill me with your anti Mac/Apple opinions. When MS goes  
proprietary you guys call it a standard, and you accept it. If Apple does  
it, it's a problem. AU is a ground up rewrite of their audio software system.  
They did it to improve audio on Mac OS. I don't like that

Microsoft does not have a standard for audio in Vista. WaveRT has not been fully released or documented in its SDK. The same as WDM never was even to this day. For Microsoft audio only a concern for Home theater and gaming applications. If it works for those markets then all is well. Any mention to do with music production or video production is at best a novelty for Microsoft. The Pro Audio and Pro Video market is barely able to crack the double digit percentage of sale for MS. MS make more money in a day than the entire Computer based audio market does in a year.

For Apple it is more like 50 percent of their market. So logically Apple has a greater interest in creating a driver model more optimized for these type of applications. Apple developed Core Audio with the some of Steinberg's help. They did not steal it wholesale from Steinberg.

Core audio was in a very similar state in it's first versions. it took a bunch of updates that included updates that made hardware and software developers have to do a bunch a recoding. I many cases Apple did such a poor job documenting the changes they manufacturers had to

find out the hard way. The current version of Core Audio is quite robust but still doesn't have all the common features of ASIO. But is also has done some things like driver aggregation(spelling?) that would have been great to see in ASIO.

Audio Units is a plug in spec not a driver. It took most 3rd party plug in developers months or even years to come out with AU versions and even longer to put out "Intel Binary" versions of everything. Some still haven't...

>

- > Now, that Microsoft is proposing the same thing, these very same companies

There no factual information on that being the case other than Microsoft's marketing jargon.

I have not seen any WaveRTs drivers so far (they are all alpha and beta versions at this point) that have performed anywhere near as good as ASIO under XP. Core Audio performs about as well as good WDM drivers did in Sonar which is very close to ASIO in latency but tends to have a higher CPU load at the lower latencies. Both WDM and Wave RT drivers are considerably more complicated to develop than both ASIO and Core Audio.

Where is there evidence of that? There are absolutely no 64 bit DAW applications on the market to test that theory.

Yet RME has the drivers that operate better than any one else's under  
Vista 64 using WDM or ASIO. Matthias is not a fan boy for either Apple  
or MS and tells it as he sees it. It doesn't always sound as cheerful and  
exciting as Cakewalk's marketing lies.

Sonar is not a 64 bit app despite what Cakewalk claims.

Perhaps when all the of the 3rd party plug in developers rewrite all  
their software in a fully 64 bit code and Cakewalk can finally remove  
the "bit Bridge" then you might see some performance gains.

I'd have to agree in Apples case sense the Pro Audio/Pro Video market is  
a large chunk of their user base so they must cater to them. For MS that  
market has no impact at all on their income so why spend much time on  
it. Wave RT is a idea thrown in at the last minute into Vista just so  
they can say hey look we can do it too.

ADK Pro Audio  
(859) 635-5762  
www.adkproaudio.com  
chrisl@adkproaudio.com James and Jamie,

Well I'll reply to you and Jamie together to conserve electrons... ;-)

I think you both missed my point, and assumed this was a slight against Apple. It wasn't.

The thread was actually about Vista and the article in which few developers showed any enthusiasm for it, and in several cases almost outright rejection. I don't blame them. OS developers really don't, and sadly, can't put the interests of professional audio users at the forefront. Their first customers are consumers.

Core audio is cool (great compared to other OS-embedded audio protocols, unless we bring BeOS back) and Apple seems to have done a respectable job by including such core media hooks in the OS (core animation too). However, the point is how much a full time professional can or should really trust the performance of their DAW to a company that makes 10x selling phones, or operating systems (Apple or MS). Of course that's a paradox - we have no choice.

Truly Apple has made 100x the effort vs. MS in supporting the pro audio/video market (well, 100 x 0 would be 0, but you get the point ;-). The point was that it wasn't developed for Steinberg's best interests, or Digidesign's, or MOTU's (where is MAS?), but Apple's. Logic was the first to support OSX because it was an Apple product, Jamie. Does Apple really release full SDKs to 3rd parties when they start developing their apps for that new design, or do they wait until they release their app, then forward the SDKs... ;-)

Just don't assume that because I include Apple in a general discussion that I'm bashing Macs. Let's also not poo poo Steinberg just because ASIO and VST weren't developed by Apple. They really did make native DAWs a reality (moreso than Emagic or MOTU if we look at the life of ASIO and VST vs. MAS or whatever Emagic's shortlived driver was called - I should remember...). Steinberg is far from perfect, but that doesn't make Apple the sudden defender of the pro audio world by default. ;-)

If you are a Mac audio user (or PC user facing the sad reality that is Vista), fear the iPhone.... fear Garageband.... ;-)

Ideally we really need an OS developed "for" audio/video alone, not home movies, not downloading mp3s, not posting pics of the family vacation. But that opens up a whole other can of worms. I guess the worms we have are as good as it gets, at least until they are all used up trying to catch bigger fish.

James - I think your link supports my comment that Vista sucks (if Aleksey, who was never going to port to OSX, now is, things are looking grim for MS and PC DAW users...). ;-)) (yes, I said it, and yes I believe it - it looks cool, but ... well I'll save the list for another day). I'm just hoping Nuendo 4 rocks on the Mac, so at least I have a backup. (I still think it sucks that with Macs I have to buy average hardware at premium prices when I could build a much more robust, higher end DAW for 20-30% less).

Oh, btw - in that link Aleksey talks about fixing a /3GB switch bug - that was yours truly that found that bug (cool of Aleksey to fix it so quickly; not so cool of MS to make Vista the next stop in the roadmap to 64 bit and where we would have no more need for it).

Regards,  
Dedric

>One question, Detric. Why do we need an OS dedicated to audio/video production?  
XP or OS X + software + quality audio interface gives me a 48 track digital  
studio in my living room. What's missing from that?

Also, if you want to try it out Ubuntu Studio is actually shipping. I haven't  
installed it but we just got 20 dual processor dual core Dell workstations  
into my office and I just might try one of them with it for kicks . . .

>Hey dedric.. That was called (Emagic Driver EASI) :)

well, I for one have taken pre-emptive measures to secure a Mac Pro (8 core) Running Cubase SX. I purchased from a friend for a really good price. I had him show me what Sx was like on OS-X/Intel..Bottem line. It handled 80 pus tracks imported form a Pro Tools session.

I was sold. He een demonstrated SX on his G5-quad. 80 plus tracks, plugins.. No problem..

That's why this I felt that article was so disturbing. I see greater and greater movement to OS\_X and Core audio-audio units. You just get a sense that Apple has the momentum with the pro audio and video market. And , sadly my hunches are dead on..

With theis Vista fiasco, I think Ms has slammed it's door on our community. But, MS has a lot money invested in AVID, so Digidesign must know something we don't..

The next few years should be interesting..

I will be testing Paris on the Mac Pro (running win XP..via boot camp. Won;t hurt to see what happens..

Stay tuned.

Apple sucks! There, now you can tell us apart. :^)

> I think you both missed my point, and assumed this was a slight against  
> Apple. It wasn't.

Nope. I got your other insightful point about Vista, accepted it and  
deleted it because I wanted to talk about the other stuff. :^)

> The thread was actually about Vista and the article in which few developers

BoOS showed the way...

- > and Apple seems to have done a respectable job by
- > including such core media hooks in the OS (core animation too). However,

- > choice.

Sure we do, just buy a different OSX DAW. There's more than just Logic on OSX, and Apple is not poisoning the market against other DAWs.

- > Truly Apple has made 100x the effort vs. MS in supporting the pro
- > audio/video market (well, 100 x 0 would be 0, but you get the point ;-).
- > The point was that it wasn't developed for Steinberg's best interests, or

- > to support OSX because it was an Apple product, Jamie.

I think the support began with Emagic before Apple bought Logic. Pretty sure.

- > Does Apple really
- > release full SDKs to 3rd parties when they start developing their apps for
- > that new design, or do they wait until they release their app, then forward
- > the SDKs... ;-)

Ask MOTU. I think Apple has been very open with the developers, actually.

- > Just don't assume that because I include Apple in a general discussion that
- > I'm bashing Macs.

I'm not. You just overlooked a few things, IMO. Framed it differently than I would, from my experience.

- > Let's also not poo poo Steinberg just because ASIO and
- > VST weren't developed by Apple.

Again, I'm not attacking Steinberg in some weird illogical scheme to make Apple look better.

I just mentioned that Steinberg's control of a standard caused its share of problems with other developers. I didn't say it was a bad standard.

But Apple had the opportunity to make a clean start on a platform standard for OSX. To be clear, I thought that was fine but they should have also supported VST. Some apps still support both on OSX.

- > They really did make native DAWs a reality
- > (more so than Emagic or MOTU if we look at the life of ASIO and VST vs. MAS
- > or whatever Emagic's shortlived driver was called - I should remember...).

We should all remember a lot of things, like, uh, I forget... :^)

What's cool is that the competition between Steinberg and Emagic produced a lot of progress, with great vision and tenacity in both companies. Add Native Instruments, MOTU, plus a few more = tons of good stuff that we benefit from now. I am very grateful for all of this.

- > Steinberg is far from perfect, but that doesn't make Apple the sudden
- > defender of the pro audio world by default. ;-)

Not my claim.

- > If you are a Mac audio user (or PC user facing the sad reality that is
- > Vista), fear the iPhone.... fear Garageband.... ;-)

I fear nothing. If Apple can continue to grow using a strategy built on supporting creative tools on the one hand and distribution/user tools on the other, that's a comprehensive vision, a flow from creation to market.

- > Ideally we really need an OS developed "for" audio/video alone, not home
- > movies, not downloading mp3s, not posting pics of the family vacation. But
- > that opens up a whole other can of worms. I guess the worms we have are as
- > good as it gets, at least until they are all used up trying to catch bigger
- > fish.

I don't see how having a computer system that can play a movie makes it harder for that same system to make one. IOW, there's more synergy than distraction between those applications.

- > James - I think your link supports my comment that Vista sucks (if Aleksey,

Don't give up, Dedic. Don't switch. Apple needs competition and I don't want to quit using the Mac yet. So go to Linux if Vista gets completely unlivable, but PLEASE AVOID THE MAC!!!! The day you switch, prices will go up...

Cheers,

Talent?

JUST KIDDING!!!! Didn't mean you, Thad.

But listening to some of the home produced music that's out there, it isn't the gear holding people back any more...

>Hey Thad - Lamont answered this as well. From general perspectives, no we don't need a specialized DAW, but as Lamont said, it's when you run against the wall of the OS and hardware's capabilities (memory, PCI buss, etc) on a daily basis, then it is an issue. In addition, the main concern is the cost of having to switch between working solutions (not necessarily DAWs, or platforms), but plugins or periphery apps, transer workflow, etc because another piece of software fell prey to a change in an OS, and is either dead or delayed. Weeks and certainly months of delay in the software development world can equate to dollars and clients in the production world.

For sure the level of capability we have with Macs and PCs today is, in a broader perspective, stunning (48 tracks of tape would have broken my budget on some projects years ago), but the requirements of the job don't sit back and let us enjoy it for very long... ;-)

I just loaded up a single voiceover and setup 4 instances of Nebula last week, and a Nebula reverb (that blows away Wizoo W2 and UAD-1 plate) and it sucked down 50% of my cpu - the problem wasn't that I don't have other plugins that would load 100 instances, it's that this plugin sounds 100x better than those and the track is nailed, with nary another track, much less my full orchestral template required to complete the spot (yes, freeze is my friend. :-).

Last night I tried to connect a simple (older Oxford 911 chipset) firewire drive to my Vista laptop to run a little audio off of, and it locked up Vista after a few minutes (apparently lost connection) - work planned for this weekend will have to wait until I can get back to the studio - hours, and even days lost on my schedule. I can't get a USB thumb drive that works with Vista (tried 3, called Sandisk support - no luck). Fortunately I don't use the Vista laptop for audio work, but it limits the laptop's usefulness in carrying it to another studio for work, previews, transfers, etc.

Obviously, there is no simple alternative to the current crop of mainstream OSs for my audio work, and in reality, OSX and XP probably don't limit us all that much (other than a few areas here and there). Ubuntu looks cool, but there is so much software and hardware involved that moving to a Linux solution would really take a monumental leap to become realistic.

Regards,  
Dedric

This is how you prevent that from ever happening (or, for that matter, also prevent someone from being so happy with the

roughs that they don't want to come back for a final):

<http://www.voxengo.com/product/beeper/>

I used it recently on a commercial that had to be sent out for approval prior to payment. Wrote right on the CD that it was "beep-encoded" so there was no surprise or shock on the client side when they heard two little beeps in their 30-second spot.

Actually I was referring to choice in terms of consumer/general OS vs. audio-dedicated OS, without resorting to RADAR (which uses BeOS I believe), Fairlight, etc.

> three, and Cakewalk are innovators in the native DAW, audio and sequencer

market. My fear of the OS vs. audio developer is in watching all 4 companies have to jump roll and spin to keep up with OS development - we are riding the tailwind of the OS, not dictating it for the most part. So far Apple's development of core audio has been a step in the right direction, but as Chris pointed out, it still lags ASIO in some ways and took a while to get there.

>

Really? You don't wonder, like a lot of other Logic users, if Logic 8 will really become "Garageband Goes to the Studio"? ;-)) lol

I see your point, and it fits Apple's marketing, but remember, ultimately Apple answers to the bottom line. While the creation to market idea is a good one, it can also mean one or the other becomes, at some point, limited by the fact that one company is defining what that means. There are a lot of experienced disciplines involved with content creation using a wide range of tools, and few of them work for Apple, and not all of them are using Apple products (unless Apple is developing a new 4k HD cam, Dolby conversion hardware, etc). ;-)

Playing movies alone doesn't, but when it is a product whose market is as diverse as this country, you should be able to see the distraction from the level of performance pro audio demands. So far Apple is keeping pace quite well - it's probably safe to say FCP has been revolutionary for the video market - the first NLE to truly quiet Avid rooms.

Oh don't worry. I'll only switch if it actually makes sense, and money for my business. A benefit of looking at all sides equally is having the ability see through cute marketing ads and fancy cases. ;-)

>>OK, forgive me for being dense here, guys. Let's put aside the question of  
whether audio and video need the same things, which is a damn good sized  
set aside but let's do it. How would a 'dedicated audio and video production  
OS' solve any of this? What you're saying is that you need more CPU bandwidth,  
faster memory, etc. and so forth. You're not going to get a whole lot more  
out of the underlying computer hardware than you get out of XP. Really, the  
OS overhead under XP is surprisingly small. Maybe not as small as the most  
efficient OS, but damn close.

Again, the question is not whether high end users need more computing power  
but whether they need a 'dedicated audio and video production OS.'

WOW!! W2 and IK Classics verbs are my go to verbs, even over Alti verb..Nubula  
you say..??

I played with free demo last winter and it was buggy, slow on my Dual-core  
Opteron PC. I'll have to them another shot.. Thanks

I couldn't even get it to work. It just sat there staring at me  
& taking up about 20% of my CPU cycles. It was like a cycle-  
sucking parasite, feeding off my PC and doing it no good in the  
process lol

It didn't make anything lock up, or anything like that, it just

didn't do anything.

NeilThe free version kind of worked here, but it was a bit like - "well here's the idea, and once it works, you'll have a better idea of what the idea is".  
;-)

The commercial version does work. It is a cpu killer, and doesn't feel fluid (editing parameters is sluggish and inaccurate), but some of the presets really do sound excellent - some sound like the hardware they emulate (there are Mackie EQs and pres... not sure why).

It also depends on what you need - I do love Wizoo verbs for spaces, but some of Nebula's are deeper and in reality, Lexicon emulations, so apples and oranges. Nebula has a U-140 plate that does sound deeper and smoother than my UAD-1 Plate 140, but it also runs stereo even from mono inserts or sends, which helps.

I guess the point of view(s)from the so called "High-End" is that we've been sold some hardware updates with the promise of vastly superior performance results.

We've been told we just wait until we get an 64 bit OS to go along with yur new 64 bit cpu and those new video cards. Then , you guys will have vastly superior performance greater than TDM.

Well, again, we've been dupped,hood winked.. Bamboozeled :)

Truth is : The average Native Power DAW user has spent the equivlent to an Pro Tools HD setup. AND, the funny thing is, this kind of user will keep on chasing that elusive "Native" faster Than Pro Tools Rig" not realizing that he or she has spent "WAY" more say over 15k in a native solution.

That's the frustration: And as James M has stated onm any occasions, they(DAW manufacturing companies) only really care about is the Bed Room user. with products 8 & 2 channels channels at a time with chessy at best on board pre-amps.

Suprisingly: The Computer makers (DELL, Apple, HP, Gateway, etc) have been great to our community. Today we can purchase a very fast dual-core intel/AMD for \$500.00 bucks...then add a nother drive \$100.00 bucks or less..instant DAW..

Another source of frustration fro th eso called high-end, is again the hype aroundn so called hardware devices that's supposed to free up cpu resources.ie. UAD.. To this day I have purchased a single UAD Card due te fact that it does not free up any resources , but rather adds overhead. Read: Big Dongle. As well as the Tc-powercore..

God Bless Steigberg Cakewalk ,& Samplitude for re-writting their code from scratch to take advantage of the Win 2000/XP platform. With their wrok, native DAW work would still be in the slow, third world midi-based land of Emagic and MOtu..

So, whatdo we do..Do we continue to invest in Native rigs like BrianT(4-dual core ) Opterons(Do the Math).. Scary.. Now, do you realize that a Pro Tools HD 1accel cost under 5k..Another 16 hundred for i/o..Boom your into no excuse land. HD2 accel..street with 192 I/O around \$9600.00.. 128 tracks..with rediculous amount of plugin power..End of story..

Oh yeah. You can run the above protool rigs on an G4-500-700,800.?????

>>>into my office and I just might try one of them with it for kicks . .I'm excited to have 48 tracks  
here, soon, but:

I get the dreaded 1/1 error. I've checked all my connections.  
3 EDS cards in a Magma chassis, plugged to the interface which  
is in the bottom PCI slot of my new Athlon 64. MEC connected  
diretly to the master EDS card.

I noticed that my PC gave each EDS card its own IRQ. Does IRQ even matter anymore on these newer machines? It seems like there is plenty to go around.

Any ideas are welcome. Thanks!!

Chris In real world use, XP and OSX are fine, and maybe there wouldn't be much to gain from a dedicated system beyond enhanced stability or just consistency perhaps (thought that isn't really an issue on my XP systems), but my thinking is drivers could be tighter and general media streaming wouldn't be subject to normal OS interaction, but I could be wrong.

I guess your last question really depends on the reality of what would or wouldn't be gained by a dedicated OS. Hard to say, but as long as we work with commercial OSs that are geared towards a wide range of uses, it is clear that we will always wonder what we might be missing. Along these lines though, I think it's only fair that we question the efficiency of hardware that is based on a 30 year old legacy model (IRQs, etc).

>>>> into my office and I just might try one of them with it for kicks . .Lamont - you might want to  
add up the equivalent plugin counts on a HD accel  
card and compare it to, for example, a UAD-1. The cost is more than double  
per plugin compared to a UAD-1, with PCs and all hardware factored  
in/balanced off. So, who's hoodwinking who? ;-)

Digi has no interest in preventing you from spending too much money. Just compare the cost of a TDM plugin to a native version - same plugin - Waves, UAD, etc. Then add not only the cost of an Accel card, I/O, but also the computer, peripherals, conversion add ons that aren't included in PT, etc.

When doing price comparisons I've never spec'd a PT rig under about \$12k that equaled what I do with my \$1700 Core 2, RME interfaces and Nuendo.

If you are tracking 40+ live tracks, then yes, native's latency may become a disadvantage depending on what you need to monitor. A PT rig will give you near zero latency monitoring, but much the same can be done with RME totalmix, Cuemix etc, though not as elegantly for sure.

However, for production, scoring, editing, sound design, and many mixing scenarios, etc - it's hard to justify the extra cost for PT HD per plugin, or per track. It is significantly higher than native, easily.

Btw - you should check out the track count mix Brian posted on the Nuendo forum recently  
( <http://forum.nuendo.com/phpbb2/viewtopic.php?t=13740&postdays=0&postorder=asc&start=300>).

I really doubt you could come close to matching it with PTHD for the cost.

Regards,  
Detric

iDunno, iDeej. iS thiS iNuff? :^)

I haven't bought an iAnything, yet. The newest iPod nano is tempting with the video support but OTOH I'm dubious about the non-user-changeable battery. More storage would be nice and it's missing a couple of features I'd want. Maybe a future version will tempt me more.

I dig OSX, though, and some of the Apple production apps. My Logic 8 upgrade hasn't shown up yet...

Cheers,  
-Jamie

www.JamieKruz.comScratch that, just after I sent that last email, FedEx rang the doorbell. Logic 8 is here!!!

But I don't have time to install it until after I get back from the NY shoot.

Anticipation...

Cheers,  
-Jamie

Ya know, you 'n me have some similar quirks. We're both pretty conservative thinking guys on many levels and then we both nelly out on issues that are decidedly associated with the more liberal friends we have.....for me it's animal rights, for you it's Macs.

I'm gonna respect your Macness and not give you any more grief. I have been kiddin' around (almost) the whole time. I'm sorry if I hurt your feelings man. Seriously. I just have this sick side that.....well.....you already know.....

;o)I think so.

long time no post on here.... honestly... long time no use of Paris ....  
but that is now changing...

after buying a new house and 2 months later, loosing my day gig.... it seems  
as good of a time as any to start a new venture.... and bring the old girl  
up to date to help in that process...

so, I just purchased a new(er) box to house Paris (the old one is 10 yrs  
old... was running on windows 98... and is...well... um... slow)

the new box has a brand spankin' new and fresh install of XP....

here comes the big question...

I have never done a Paris install on XP before... what sort of obstacles  
should I be looking out for? any hints/suggestions?

Heh. So Macs are "liberal" now? How so?

iDoubtit. :^)

What about Rush Limbaugh, should we take his Mac away?

Nah, not everything can be shoehorned into a simplistic and one dimensional "liberal"/"conservative" dichotomy.

Granted, such a contrived construct can be useful for people who enjoy talking past each other, and who relish buying into a particular story line no matter what. We're gonna see a lot of that over the next year or so.

But in a vast, multidimensional universe, two points on a single line don't solve many overall problems, and I wouldn't think they really help with computer shopping.

Cheers,

-Jamie

So which dimension are Mac users from? Sounds like a philosophy on the odds for being struck by an asteroid, and winning the lottery....at the same time.

I didn't know Mac users thought that deeply about their computers. Might be a good idea to turn off the voice response system, Dave.

;-)Hi Scott.

This should tell you everything you need to know:

<http://homepage.mac.com/osxlover/ParisFAQs/parisonxp.html>

Cheers.

Most of my more liberal friends use Macs so for me, it's a POV kinda' thing.  
Rush ain't my friend, so he don't count.

> Granted, such a contrived construct can be useful for people who enjoy

Awwwwww.....c'mon Jaimie. You think the guys in the Mac ads aren't  
(subliminally, at least) shoehorned?. I hardly see the kid on the right as  
being a Sean Hannity fan. Maybe I'm off base here, but .....anyway.

;o)

Sure, if you think commercials represent reality. :^)

OTOH, do YOU identify with the "PC" guy in those spots? I didn't think so.

You're way cooler...

Sorry. You hit one of my pet peeves - the simplistic division of  
Americans into two knee-jerk groups.

Carry on!

Cheers,

there was also a (post production, I think) studio in Leith (edinburgh) that were stalwarts of the system, can't for the life of me remember the name, but its worth checking into.

thanks again

Kerr

>And here it's much worse than just dynamics or pumping. Here the sound is just smeared with a crushed distortion that is unlistenable. I wonder what a sine wave would come out as. I don't know how many users other than Lamont and I are using Nuendo, but N4 was just released - shipping in early October:

Highlights:

\* New automation system (complete automation panel): new modes include the ability to only write from an point, leaving previous sections absent of automation (Virgin Territory option); fill modes, preview mode, and much more. Looks like automation is about 15x more powerful than it was before.

\* New key commands for Cut head/tail, selections (great for post)

\* Free routing: any group or fx to any other, plus post fader routing

\* Media Bay (I hear it's enhanced from Cubase 4 and works quite well for an FX database - also great for post)

\* VST3 - all included plugins are VST3 (biggest post advantage is automatic adapting to multichannel configs - Flux plugins already do, but now VST3 plugins and Nuendo's stock plugins will also).

\* New logical editor looks much more powerful

....etc...

I'll let you guys read the rest from Steinberg if interested.

For post this is a great release - the new automation and key commands alone are worth the \$249 upgrade - free routing will be a big boost for me as well.

Regards,

DedricHey folks... does this sound ridiculous, or does it sound ok? I use to track/record straight from the instruments/mics to preamps and directly into my 8in cards.

For the purpose of performing live, I recently purchased a behringer SL3242 (24 channel mixer) and I have the main outs going back into 2 channels on the mixer. If you are familiar with this mixer, there are no direct outs (like I am use to for multi-track recording) and I have to use the Sub 1 thru 4. I am so disappointed with the levels I could cry. Levels within

the mixer are good, but what is going out the subs into Paris is so low. I have the sub levels almost max'd, but still I have to open each .paf file after recording and increase about 10db. Playback is ok... except again the levels I am sending to Paris. My question is... would it be inappropriate to put a 4 channel preamp between this mixer and Paris... I need better levels bad and I am getting desperate. I love this mixer except for this reason. I would have never purchased it if I knew it didn't have direct outs. I don't like the subgroup crap, but I have no choice but to use it...

Has anyone else run into this kind of problem? Of course if I use a preamp between the mixer and Paris (on the 4 subgroups) I don't want to hurt my levels coming back into the mixer while I am recording. I am one of those all around performer... I do all the instruments... and my abilities are limited to only recording one at a time... lol.

Any comments or suggestions... besides throwing away the mixer. Sorry but \$600 is like Ft Knox to me... I am a peasant and that is many months of savings to me...

Anyone?I don't see ANY decent music recording DAWs coming to life anywhere... that is affordable without a Sony bank account. I scratch my head and wonder why... why can't they purchase a used Paris system and build one like it! OMG!

All they build is little Firewire and USB crap anymore. I feel like I am back in the Abby Road studios with the Beatles who were limited to 4 or 8 track recording while the rest of the world was enjoying many tracks.

Crips that automation features stuff looks amazing.  
I hope the freely assignable i/o-effects stuff ends up in C 4.  
But hey whats up with the Expansion kit. That parts kinda silly IMHO.  
If they were gonna do that then they should make the price lower I think.

>

So does this mean you won't be able to use the UAD 33609, since it doesn't  
work about 48K?Automation does look amazing, and word from some beta testers is that it's  
over the top of what  
post users had asked for - instead of just giving users what they wanted, it  
sounds like SB decided to  
blow the doors off of it in hopes of gaining more ground in post, even in  
large console facilities.

The expansion kit concept was rumored when Cubase 4 was released, but in a  
different form. The NEK  
idea is to allow post-only users to forgo the score editor and some extra  
midi functionality, but for those of  
us that do post, composing and sound design, to keep it. It's a bit odd at  
first glance, I agree, but after thinking  
through the market, it's about as close to making sense as I think a DAW  
developer aiming for post and music  
markets can be. While a post app really doesn't need midi at all, it's  
becoming useful for many areas of that market,  
and for sound design/composing, of course its' crucial, but so are some post  
features (edit mode for scrubbing events  
to picture, automation, etc), so leaving out midi features also wouldn't  
make sense.

Regards,  
Dedric

From the video it looks like any audio, group, fx or VST connection can be routed to any other. Not sure if it does all the same stuff but I bet you it i way easier to figure out how to do it. :)

ADK Pro Audio  
(859) 635-5762  
www.adkproaudio.com  
chrisl@adkproaudio.com Any group can send to any other group or fx (no order requirement  
anymore),  
and any fx can assign to any group or fx.  
Also, sends can now be post fader (output assignment tab now includes  
groups, fx, etc). In addition we can also  
route any group, fx, or buss back into an audio track for submix/mixdown.  
Nuendo will also detect loop backs and disable  
them. Sweet.

Imho, routing sounds like it is just as flexible as Reaper, but not as  
confusing to trace as Reaper's is.

Cubase 4.1 is on the way and should include the music production features  
(routing, etc) sans post features (don't know how much

of the new automation will make it into C4.1, but some might, if not all).

Regards,  
Dedric

Yes makes sense but they better be clearer on what Nuendo's base MIDI functionality is.

I would like to see them bundle Halion, Groove Agent and Hypersonic for free with Cubase personally to give it that "perceived value" to the end-user thing.

I think kicking up the marketing end now with both Logic 8 and Sonar 7.

chrisl@adkproaudio.com  
HI David,  
I know they did in Cubase 4. There are now current DX plug ins being  
made. Most of the old DX only plug ins either didn't well or had issues  
even working on current OS versions. But that was mainly due to those  
companies chose pf copy protection. From what I gather by the DX 64 bit  
is that there will be a new DX plug in spec based on DX 10. But not  
really sure.

I've used Eurorack MX3242 to feed Paris for years. Wonderful mixer with 16 direct output channels to go right into Paris.

That is one of the major problems with this mixer, there are no direct  
outs. I have smaller mixers with direct outs and I am use to that... I  
just can get decent levels from the 4 subgroups on this mixer... That is  
the only way to get individual channels from this mixer.

I didn't check the level button on the 8in cards that I have and I'll check  
those now that I remember that they are on there.

Donations are always welcome. :) Thanks so much for offering. It's really great to hear that I'm making a real contribution to the community. I was a little afraid I was too late.

You can donate via paypal with my email address: mike AT mikeaudet dot com.

All the best!

Mike

>Hi Tom,

I'm so glad to hear that this stuff will be useful to you.

Donations are always welcome!

Paypal address: mike AT mikeaudet dot com.

I'm actually planning to set up a mini site to host this stuff. I registered  
ensoniq.ca, but I'm just so busy that it may take a little while to get to  
it. I'd rather spend my time working on a new plug. :)

Speaking of new plugs, there are some unreleased algos in the code Chuck  
posted. I'll be turning my attention to those next. I can't promise anything  
because if there are dsp code bugs, there's not much I can do. But, I'm  
very hopeful!

All the best,

Mike
