>
>>Anyone ever tried this or other things ?
>>Regards,
>>Dimitrios
>>
>>
>This might help :-)
>GHere's Brian T's latency measurements-
Paris latencies:

Round trip via insert (EDS "External") through SPDIF I/O = 1 Sample

Round trip via insert (EDS "External") through MEC 24 bit
analog Out to analog In = 60 Samples = 1.36ms/44.1KHz or 1.25ms/48K

Total record and monitor path (Channel In/Stereo Master Out) MEC 24 bit
analog In to analog Out = 66 Samples = 1.5ms/44.1Khz or 1.375ms/48KHz

EDS compressor with no lookahead = 2 Samples

EDS EQ = 0 Samples

I'd say that you're looking at one sample. No big deal.

I'm clocking a Quantec Yardstick, Power Technology DSP/FX card, Lexi Core 32, Sony V77 and POD Pro and interfacing them with Paris through digital patchbays. There is no audible latency.....at all.

Deej

Haven't bought one yet. The EDS plugin that Chuck created (can't recall the
name)
can create a similar effect w/ a 50 Hz tone mixed in w/ the kick... Also can be
tuned
to the key of the song!

Gantt

I know that anyhow EDStransfering or not EDS cards run hot so to be on the
safe side it is better to add those little chip coolers.
I guess those Ensoniq chips are the candidates here...
Regards,

Dimitrios

Eds compressor has a 2 samples latency as opposed to Sonalksis compander
which has 0...

So for drumtracks that should be taken into consideration,

Regards,

Dimitrios
