now I just have to find out who two of those guys are...

-steve the not-all-knowingStandard 9vDC output, at whatever amps you need, will get it. Primary transformer winding doesn't matter, it's about the output side. Typically, Roland is negative tip but you'll wanna verify that on the unit or in the manual.

Hi Dave,

Yes. It is properly connected with the switch set to RRC. No workee. Fortunately the GC8 works fine externally powered.

system, the RVOX plugin is pretty cool.  
Without compression, I use it as a soft gate.  
The bonus is that if you can add some fat, and still have the rejection.  
Works for me.... two knobs, kinda like an over-easy with an  
expander before the compressor.

[http://www.xxcopy.com/index.htm#fw\\_pew](http://www.xxcopy.com/index.htm#fw_pew)when it happens to me i just restore my drive image in 4 minutes and I'm back.

I put all my files on a server so nothing of value is on the box and can be whacked anytime. it's the only way i've kept any sanity with a pcwhat's the easiest way to get my tonlab le toslink SPDIF output into the rme 9652 9 pin D connector SPDIF input ?

I have the D to stereo phono/D adapter so I guess I need to go from SPDIF toslink to 2 phono connectors. Is there an SPDIF Toslink to stereo phono converter for a few bucks ?I see these but not a stereo one:

<http://www.google.com/products?q=toslink+converter&btnG=Search+Products&hl=en&show=dd>maybe this ridiculously expensive thingy:

<http://www.svideo.com/digitalanalog.html>plus i think the phono inputs are digital anyways. hmmmman, this is fun talking to myself....hehe.....the red phono jack is output and the white is input digital so i just need a toslink to phono digital converter i thinkmaybe this is the ticket:

<http://www.hdtvhookup.com/tooptococodi.html>Hey Guys, thanks for all the helpful suggestions. However, maybe I did not make my point well. The drive does not seem damaged. Only the hal.dll file.

I have tried booting off another drive I have so I could simply replace the file on the problem drive but when I try to open the windows folder it tells me the drive is corrupted. Only the windows folder. All the other data is fine and accessible.

There are many fixes for hal problem listed on the web, all of which I tried already. I just need to know if there is a way to access the windows folder on a drive on which you are not booted?

not booted from. with the bad hal.dll I can't boot from it at all.

That's the problem.
