>Hi Tom,

Connecting between MEC's doesn't defeat it at all... the
conversion **will** be clocked by the external Generator
regardless of how it is connected. With fewer than three
interfaces, it seems to work better this way.

I never use a default project. I create template projects
and open them up once Paris has been launched. This has
always worked for me. I would try deleting the 8,8
line... I don't recall the default installation having this
line in it. I believe this is something that Edmund and BT
had worked out when he was having troubles with a certain
set-up... I have never messed with it myself, and have the
identical system you have working flawlessly with external
clock.

David.
