>I would like to publicly say thanks to Mike Audet for his work on the
paris drivers. With his new adat.dll file I've just booted up my new
system, which is 4 eds, 4 mecs, and 21 MEC cards, including 7 adat
cards. Everything showed up and is locked to external wordclock (Lucid

GenX-192), no problems so far.

My next step is to get the PTHD/Logic 8 system connected and actually stream over 48 tracks of adat to Paris, then eventually another 8 from my virtual instrument rig, and then patch all the analog outboard on the 2 bus.

I'd also like say thanks to Kerry Galloway for helping me troubleshoot, and for some great conversations over the past week. It's the community that makes getting back into Paris a fun journey, even if the whole thing is a little insane..

Cheers,

TCSounds like a dream Paris setup!
Keep us posted on it's stability.

Nice to see you are alive and well, I guess things have been extremely busy at ECMM lately..

I'm really not sure what you've been going through lately, but since you have time to post here regarding other customers needs, I would have

appreciated even a quick reply to any of my half dozen emails and numerous phone messages over the last 3+ weeks (even a "hey, I'll check into it and get back to you"), but I do appreciate you finally getting my Paris stuff shipped out to me last week. I'm still completely baffled by this since since I've dealt with you numerous times over the years and it's always been great and you've been top notch every time. Anyway, I'll chalk this up as an anomaly, and I wish you all the best.

Cheers,

Torry

Will do, I'm just getting the PT rig hooked up to Paris now.

I'm just smiling at how far Paris has come since it was discontinued :)

I think it's a testament to how good Paris sounds, even today.

Cheers,

TC

>I should also point out that this is 4 eds cards in a virtuavia
expansion kit:

<http://www.virtuavia.eu/shop/pci-e-to-pci-expansion-card-kit.html>

I am also running a single processor 2.7Ghz athlon. I haven't given up
on the Mac Pro route, as I did get paris running on it, but it was
starting to hurt my brain with the mult-processor aspect, so I opted for
a dedicated pc running XP.

Cheers,

TC

Mac Edition. Now I have two monitors working and everything looks hunky dory
until I start Paris, and as soon as the windows appear it freezes up.

Any suggestions?!?Mix magazine did a series on the dyes and their properties .If I remember
right,phthalocyanine is what you want.

phthalocyanine has a characteristic blue tint.as opposed to cyanine ,which
has a green/yellow tint.

get the blue shit!

more technical here: <http://en.wikipedia.org/wiki/Phthalocyanine>

>I initially had a couple of errors that went away when I rebooted the Paris PC.

I've now got 16 channels of adat from pro tools (using one 192 Digital I/O) at 48k/24bit going into paris, spread across 2 Mecs, so I'm using 1 adat card per mec so far. I've been looping it for about an hour just in live mix mode, and had no problems. So far so good. I'm short of optical cables, so this is probably all I can test tonight.

I'm also trying to break in my new avantone mix cubes at the same time. These things are pretty cool..

Cheers,

TC

>Hello. I lost my audio drive on a PARIS system that I have been using without trouble for the past five years. Since I have replaced the audio drive, I'm unable to playback audio files.

I get the "Can't Stream Data fast enough" error message that says to get a faster drive.

I'm on an AMD 2 gigahertz processor with 512 MB of RAM, running on Windows ME. This is a 4-EDS card system. I have an 80 gig WD drive for the system and a 320 gig drive for audio. This system has played back 64 tracks without a hiccup in the past. This system is very similar to one DJ was using a few years back.

The new drive is a WD 7200 RPM Caviar Blue, 320 GB.

I've tried all possible variations in the PARIS configuration menu, and tweaked the vcache in Windows' configuration to vcache min and max of 8192. I've gone through the 16 page collection of configuration tips from Steve Dellamagioria's PARIS TIPS. Still getting the message. I get a few seconds of playback, then it stutters and stalls. I can tell it's going to stall because the meters on the mixer display look jerky just before it stalls with the error message.

When I look in ME's device manager, under Performance, File System, there is a message about "Compatibility-mode paging reduces overall system performance." and "Drive C: using MS-DOS compatibility mode file system" as well as "Drive D: using MS-DOS compatibility mode file system".

I don't know if those messages are normal or the cause of my system becoming unusable.

I'm not a guru when it comes to computers. I'm pretty adept at using PARIS when the system is working properly. Can anyone point me in the right direction? Any help would be appreciated.

Thanks.

Bob H.<http://www.kfocus.com/paris/> Bugs and Troubleshooting

Seeing "using MS-DOS compatibility mode file system" is your problem I believe and is a driver problem apparently. I don't remember the cure but the internet says

<http://support.microsoft.com/kb/130179>
and

"goto start run and type REGEDIT do a search for NOIDE where ever you find

this instance delete it from the registry."

From Edmund in the past.....

Data cannot be streamed fast enough.Change PB settings or use a faster drive

they are in the project window under settings. as to what will work for you depends on your computer ie ram, disk performance, vcache in your sys edit and the settings on your dma. for me i use 96,48,8192, but they have changed from one paris version to another. if you have a prg that measures you disk input and output rates you can use those numbers to set paris up for optimal use. go to purgatorycreek.com where there is a program (free) to analyze your drives.

rick

ab van goor wrote in message :

Too often the error message "Data cannot be streamed fast enough.Change PB settings or use a faster drive" is comming up the my screen.Can someone tell me what these playback settings are (apart from the scrub settings)and where you can find them? In case the configuration settings are meant why don't we call them so?
thanks for your help

> No luck. I have a pc 233, 9.1 scsi, and 8.1 ide, with 64 megs rm. Paris configuration is, 64 disk i/o - 32 cache.

Let me understand: if you are using 64K I/O you really don't need more than 10-16 MB of cache. More cache MAY be causing you problem in that it may force the PC to use too much VM.

Do this:

- Change the disk cache to 12 MB,
- Make sure that there is a line in your system configuration to limit the dynamic Windows cache (or you will get playback for 10-60 seconds, then "disk too slow."

This should easily get you full 16 tracks of playback.

Render those tracks before touching the play button. I'm betting you have
something funky in an edit on the play field somewhere. Pay attention to the
tasks/progress window, if it crashes again you'll want to know what it was
working on. Better yet, just render one track at a time. Also, don't let the
'dead space' below tracks 17/18 in the wave editors show, and if they do
then open/close that window. That's a known bug that BT discovered that
causes some wonkiness.

I've dealt with this issue quite a bit.

I've even caused it on purpose to try to figure out how to fix
it.

(recording with looping on (with no punch points) will cause it)

Anyway, in ALL cases that I've seen, the error seems to be caused
by a corrupted segment on the playing field.. actually, I believe
it is caused by a corrupted crossfade, to be specific.

Whenever, I get this error, I remove the last take/edit from the playing field (between the dialogs popping up), save, quite and restart paris.

At this point, the problem seems to go away.

Good luck!

Try increasing your disk cache and overview sizes in the Config menu. On the problem project, clear the Undo buffer and delete the Markers.

I never have that problem anymore (like once every 6 months now) since I increased my disk cache size to 128MB and my overview to 21000KB.

Started to get error code: error in queing project. Error code 1879048233/70000029 every time I try to record.

Does anyone know what this means? I did a search and found others who had the problem, but no answers as to why.

Try resetting the record path to a new empty folder.

Or if you are on the Mac and running anything before OS 9 you may have run out of open files (MacOS limit). If this is the case try clearing unused files from the audio window.Yeah Don, and how about my third site listed too !!!

Thanks John & Aaron, I will get this stuff Wiki'd ASAP. For some reason my own 029 link on the "Bugs/Troubleshooting" page points to a bad link. Fixing - d'oh!

<http://www.kerrygalloway.com/WikiPARIS/wikka.php?wakka=BugsT roubleshooting>

OK, this is what it looks like now.

>Hi all,

I'm in need of a video card for my paris rig so I can use multiple monitors. Currently I only have onboard vga (mobo is a BIOSTAR MCP6P-M2 - Chipset NVIDIA GeForce 6150 / nForce 430)

I've got one pci slot left on the mobo, so I need a pci solution (no AGP slot). I did find this card that looks like it would do the job:

nVIDIA GeForce FX5500 256MB PCI Video Card

I'm wondering if anyone has had good or bad experience with this card running with Paris? I'm just trying to avoid any potential headaches.

If there's any other cards that anyone can recommend, I'd also appreciate it.

Cheers,

TCEvery chipset I've got has played very nicely with GeForce stuff. (that's via, SiS, intel in my place). I use both PCI and AGP nVidia vid cards here, from lower end to medium (not a gamer) level stuff. ATI and Matrox both gave me some grief in these some of these same systems. Stick to standard windows model drivers IMO, the gamer tweakware stuff may only bring trouble or shortened CPU headroom.

I think you're probably in great shape going the GeForce route.

What is that? Are there any songs I can hear that do it clearly? I thought
compressor pumping was bad. hmmThanks for posting, TC. With a little luck, I'll have a fixed up
Scherzo
driver early in the new year. Then, I want to try to get the ASIO driver
working with low latency at 24 bits.

There's lots of good stuff ahead for PARIS.

All the best,

Mike

>Hi Gantt,

There's one guy I know of who bought an eight out module from me earlier this year, Frazer Horton (oakhurst at intonet dot co dot uk). He's been on the board a few times (maybe more in the old times?), but I've no idea what his setup is, may not even have the facilities. He is in London though!

One of the only other users I know of here in the UK is Andy Longhurst (ajl at theartofmix dot com, posted on the FS board recently), he's in Stroud, Gloucestershire (a couple of hours from London). I think he still has a pretty full setup (I convinced him not to sell out of paris yet, well not until I could afford to buy it!), but don't know if he's available for work.

that's about it as far as I know, sadly I am waaaaaay too far north for London!

good luck

Kerr

or to put it another way, sidechain a compressor over the main stereo mix, using a kick drum as the trigger. Used in loads of dance music over here (mainly main room bass breaks and fourfour funky house, etc (sorry, does that even mean anything to you guys lol!). See Daft Punk (french house) for good examples. It basically gives the whole song a 'pumping to the rythmn of the kick drum' feel.

There was a good technique article in SOS about doing it with Reason:
http://www.soundonsound.com/sos/sep08/articles/reasontech_09_08.htm (sorry, it's an Esub article), and a good little video on youtube by a recent hit in the UK, audio examples get good from about 4.00 in, but it's worth watching the whole thing: <http://uk.youtube.com/watch?v=lxBrJP52vY>

enjoy

Cubase?
I get hanging notes from time to time and I find I have to mute
the instruments in Kontakt individually to stop them.

Maybe I need the panic button for Kontakt instead?

This key command will be well used by me.

Thanks,
TomHey John,

"One More Time" by Daft Punk is an example that leaves no question about
the use of a heavily breathing (pumping) compressor. Pretty popular tune
too.

The Reset function

The Reset function on the MIDI menu sends out note-off messages and resets controllers on all MIDI channels. This is sometimes necessary if you experience hanging notes, constant vibrato, etc.

stop.

You can turn this function on or off in the Preferences (MIDI page).

This is a very handy function for MIDI recording. At the end of each recorded part, a Reset event will be inserted, resetting controller data such as Sustain, Aftertouch, Pitchbend, Modulation, Breath Control, etc. This is useful if a MIDI part is recorded and e.g. the Sustain pedal is still held after stopping recording. Usually, this would cause all following parts to be played with Sustain, as the Pedal Off command was not recorded.

John, Kerry. I saved the project to another name, rendered the tracks and all the wonkiness went away. Didn't see any wierdness in the tasks window either. You guys are great. Paris is fantastic as always, especially recently with all the good works of Mike and the boys.

Best always,
Rich

> This can be prevented by activating "Insert Reset Events after Record". Ditto. So many things
ahead of my building a new system and having time to
set back up to a 4 card system. Once I do though I can't wait to pull it
into integration with the Creamware system and add the house wordclock. The
capabilities will be another learning curve but man... to have a current DAW
editor with 1.5 mSec latency feeding Paris will absolutely rock the world.
Tying digitally into another super fast DAW for Plug in access will also

kick butt, I 'loathe' the latency game when demoing a set of plugs for what they do to/for a track.... enough that I boxed the UAD over it and put it on the shelf for this coming day.

Thank you Mike and Kerry.... for what you've done and what you are yet to do.

AA

No problem, thanks for your amazing work. You and Kerry have really
breathed some new life into Paris, it's really very exciting.

I'm still in the testing stage, but I've attached a pic I took of my
setup while testing PTHD/Paris integration. You can see the MECs and the
192 in the far rack.

I'll probably sync the 2 systems via MTC and use Paris in Live Mix mode,
as I see from reading the manual again last night that you can
supposedly do automation in Live Mix mode.. that's basically what I'm
shooting for, for now anyway.

Cheers,

TC

-----080103060807050205090604--1.Can you run PARIS on multi-core cpu's? I remember
Edmund saying that PARIS
was a multi-threaded app and would "just work" in his
words when dual processors became available(this was in 2001?)

2. Is version 3.01 available for PC free (I would think by now since it's been dead for so long)

3. Is it possible to add Rewire to PARIS? I asked for this way back when Edmund asked for request. Everyone was asking for MIDI back then, I thought that Rewire would have been a better way to go, but who am I.

4. Any plugin compensation solution available?

5. If Rewire is out of the question, how are the inter-audio transfer solutions? (Jack audio.. I think one was called)

Could you list any other advances I might not know of.

respect

NappyHi Nappy,

Others will jump in with better info, but since I'm just newly back in my basic understanding is:

1. Yes, with the work that Mike Audet has been doing on the drivers, and the couple of utilities to bind Paris to a single core.

2. Not to my knowledge.. (cough)..
3. Don't think so.

4. Yes, a couple of them, one new one which looks pretty cool when I read about it. Kerry G can fill you in better on this. I think there's info on the Paris wiki he did.

5. Not sure, I've gone the 2 comps/lightpipe route, I figure that's the least stressful path with Paris. Wormhole is maybe what you were thinking of?

I also did get Paris running on my Mac Pro, but then reinstalled and had some issues (very likely pilot error in configuring), so I just ended up putting together a new single core Athlon pc for around \$200.

Cheers,

TC

Rich

"It sounds like you have a slightly corrupted playlist on one of the tracks. Try disabling playback one track at a time to isolate which one it is, then you can try changing the fades or some of the edits to narrow it down.

If you send me the application debug messages I may be able to tell you more."

was just thinking about getting a UAD card. Maybe I'll think twice about it
and follow you're success with the new setup. Might be over my techie
abilities though, as you know I know enough just to get by :-)
