with Eddie Fritz?) -
same responses. In some ways I liked it, but in others,
not my favorite - still beat the pants off of ProTools interface - and more
graphically creative than anything at the time.

Did you (or anyone else) ever see Mantis? Brian T had it running at his
place as a patch bay - iirc, it was a somewhat similar interface, but I
think in the blue-grey color scheme - pretty darn high tech and cool looking
at the time, imho. It also looked like it would have been Paris on
steroids. Aaron probably knows of it.

Same here. Have a great day.

Regards,
Dedric

around with Totalmix or the Cubase 4 Control room function (which doesn't work with ADM). Anybody notice that www.intDevices.com has updated their site.

pro audio is "coming soon" with a PARIS screen shot.

anybody hear what they're up to?

Perhaps releasing a software only version?

-Randy Even if they are, would it be useful for anyone other than someone who already owns PARIS hardware and wants to edit on their laptop?
