ig question?

I'm getting ready to start tracking a new project for a local band, and I was thinking about doing the basics in Paris, then porting over to Cubase for overdubs & mixing - if I have a single EDS card, one MEC, two 8-in's, and an ADAT card, is there any "best" order to load the cards in the MEC? I just got the 2nd 8-in card the other day (thanks, John Shapiro), but I've noticed that with the current setup in the MEC (which is 8-in in the first, slot, ADAT in the 2nd) the patch bay sees the ADAT card first, then the 8-in. Is that always the case? IOW, I'd like to have it so that the patch bay/EDS card sees the two 8-in modules first, THEN the ADAT card.

Neil

I actually saw one of those bumperstickers that say :

"Vote For Monica Lewinsly's Ex-boyfriend's Wife" yesterday. I thought these were just a myth.

I was in a downtown diner last week <http://www.durangodiner.com/About.htm>

It's a cool place. A relic.....one of the last surviving diners like you

used to see in every small town where the local townsfolk would gather and

chew the fat...except this particular place alternates music by Johnny Cash

and Merle Haggard with Beatles and Led Zeppelin.

Some guy who apparently knew the cook/ owner came in and sat down and in a

loud voice said "I just saw a bumper sticker that said "Vote for Monica

Lewinski's ex-boyfriend's wife".

About 3/4 of the clientele in the diner just about lost our lunch we were

laughing so hard. A table full of Hilbilly supporters took offense and things started to escalate towards ugliness.

The owner of the place put the brakes on it. I think he should have supplied both sides with cream pies. I think if we had a national pie fight everyone would feel better when it was over. Back in the 90s I was down south and saw a sign in the window of a gas station that said, " Only in America can we have a draft dodger in the White house and a Vet living in a cardboard box"

Thanks

RobBitchin' Diner!

Let's go. I'm on my way.

DCOur neighbors have a couple of young great danes. About two weeks ago the doorbell rang late at night and it was the wife who was in tears because Levi, the male, was having a siezure. Amy grabbed her vet crash kit and ran over there. It looked like Levi was choking on part of a small rubber toy. Something seemed to be stuck in his throat and after rubbing his throat, whatever it was seemed to pass and the dog came around. We sorta' doubted it was a toy in his windpipe, since if it would have passed, it would have passed to the lung and this obviously didn't happen, but anyway.....he was up and around. I'm not sure how long he had been siezing (and possibly not breathing) before this passed.

Anyway.....same thing happened again last night. He siezed three times in a row, we drove him to the vet, the vet treated him and he seemed to be OK so we brought him home. They called this morning and the poor thing had siezures all night and it appears he has stroked. He can't get up. He's a beautiful, very sweet dane and I'm afraid his time may be up.

It's all up to God at this point, and I really, really do believe in miracles so I'm doing the only thing I can for this wonderful guy. If you've got any puppy prayers for Levi, he could sure use them right about now.

(sorry about the redeye.....my bad)

Hi Barry,

I think the parisfaqs.com has alot of great info, but you are right, there is no step by step order. It sounds like the best thing I can suggest for you to focus on is your paris.cfg. Look in the faqs and find the area about what to change and what suggestions they offer. It makes a world of difference once those settings are set properly.

You didn't give too much info about your system, so I'll assume you are using XP... be sure to right click your "my computer" and go into "properties"

and look for "devices". In your devices list will be something like "IDE ATA/ATAPI Controllers" for 0 and 1. Be sure these are set for DMA and not PIO. XP loves to default to that PIO junk. Once you change it, reboot!

Lastly, two things to think about or check... make sure your data drive is a 7200 RPM drive. The slow 5400 or 4200 aren't good drives for Paris i/o data. And drives are very cheap. Replace it if it is slower than 7200.

The last think I can think of is.. if you are using XP, is to turn crap off in your services. Which ones? Well, that is hard to cover, but you can do a google search for audio devices turn off, or something like that.

Here is a quick one and normal devices that hog resources, so turn them off...

http://help.cnet.com/Audio_System_Components/9602-12576_39-0.html?messageID=2505922&kw=Audio+System+Components&n odId=6462

Hope this helps you... Good luck!!!

...

The Trident would be a KILLER!! addition to your rig. I hear they will have a ADATdigital i/o option in the near future.

Lastly, I dicovered the oposite: Track in Nuendo/Cubase/Slow-Tools/Sonar/DP/Logic... Mix in Paris. Reason:

Even tracks dumped from an Roland VS-880/1680 sound better when imported into Paris.

Tracks in Paris take on a New Life. Now, When I take tracks recorded in Paris and mix in Slo-Tools, NUendo etc..The magic is gone. And, thus the tracks start sounding they were recorded in those DAWs..

>Hey all,

Checked out the Steinie demo at East Coast Music Mall last night. I briefly checked out SX 4, didn't see all that much that I cared about, and kind of forgot about it. I've been trying really hard to get deep into Live these days, and didn't really want to work on another app, at a certain point I'd rather just finish a damn song whether it's in Fruity Loops or Pro Tools HD.

Anyway, I was wrong. The v.2 => v.3 'upgrade' was trivial, but the v.4 is not. Lots of interesting changes in managing presets, some useful editing tools, some nice tempo matching tricks (way back in the 1890's I got my first music writing gig because I figured out how to get Cubase VST version .1 to sync tempo to a piece of audio, it was that hard. Kids these days . . .), the external hardware delay compensation, and so on. Also, a nice librarian for audio, video, and MIDI files. None of these individually would make it worth the jump for me (I can manage presets, thank you very much), but put together it looks like a real winner. I think it's a big enough deal that I'll switch when it comes time to mix the Monkeys. I'll keep tracking in 3.x because that's working fine but I might take the plunge for 4.x.

For my own music, Live still really is the way to go. The best app in the world for that 'the computer is just a big sampler' vibe and their 7 upgrade is similarly impressive. For rock'n'roll SX 4 looks like it has everything I would really want from Nuendo and a lot more than SX 3. For electronic blips and bleeps and downsampled/pitchshifted/filtered Thai girls saying 'so-wa-dee kra' and making a break out of I'm sticking with Live. Can always ReWire them together if it's necessary.

Anyway, long post, sorry. SX 4 => Looks Damn Cool, I was unfair in not giving it a larger workout. Hope it has deep Euphonix Artist control support. If they get the PC thing working on that I think I'm good for a Control + 3 fader banks, which would seriously rock my world.

TCB

P.S. Morgan made an interesting point, the marketplace seems to be narrowing down. Apple/Logic, Yamaha/Steinberg, and Sonar in the native space with a few stragglers on other apps (wouldn't know anything about that here). PT v. Nuendo + Yammy digital mixer at the high end and in post. LaMont, I think Nuendo and the 02r96 might be the closest 'middle tier' out there. Cheaper than a big PT plus controller rig or a DM2000, but lots of hardware f/x and software integration. I remember the first 02R as being a head crushingly bad sounding device, every reason to hate digital all mixed up into one.

Supposedly they've improved.

P.P.S. Now we're getting way OT, but it was funny tonight. Obviously, I'm a tweaker and twiddler to the nth degree sometimes, but a lot of the demos I was sort of like, 'Yeah, you could do all of that very fancy editing but you also could play your goddamn part right.' I think that's coming from actually spending lots of time tracking large, loud instruments for the first time in years. When one of the guys in the Monkees says 'Well, I think that sounds good but maybe not bright enough. We can always EQ it later' I'm the one to say, 'No, let's move the mic a little more on axis or get another mic on it. The better it sounds now the easier it will be to mix later.' Ya know, Alex Chilton managed to make '#1 Record' without unlimited undo, so maybe we can all play our instruments well and sing in tune and leave some rough edges in there so we don't sound like Bon Jovi. Anyway, that's my opinion now for some odd reason, I think playing through Savage and Top Hat amps with a choice of five _really_ nice electric guitars helps ;-)

Once I'm back in electronica land I'm modulating pitch descend on kick drums with LFOs from the bass patch like I'm supposed to. Neil wrote:

It's more likely to take more than one approach. There's no single magic bullet.

Cheers,

> Neill beta tested DFH Superior for a while several years ago, triggered from my DDrum kit. The triggering was quite usable even then.

I had some complaints about some aspects of the user interface design and I moved on to other solutions. But it looks like they've really improved the GUI and added some very nice capabilities.

Cheers,

To date I have read every link you have posted and even quoted your sources.
So far you have done nothing but insist my sources are shills for big oil
and refuse to even read a single article a listen to an interview. that
simple fact speaks volumes about you and the enviro-movement.

I'm done

Not content with hijacking this entire board, Jamie now moves over to another one on this server... please, please, nobody post any tube gear they're trying to unload on the "for sale" section, otherwise he'll take that board over too, with a series of 8,700 web links that claim a direct correlation between the heat emissions of tube gear in New Zealand & increases in the number of icebergs calving off the Ross Ice Shelf in Antarctica. Can't just blame just Jamie there Neil...my name's up there too.

Wasn't there a song with the line "I started a joke"

;-)

it's over on the general thread now so ya'll can return to your regularly sheduled programming...along with the religious discussion

hehehe

forgot to mention that was funnyNeil, what's up?

Don asked me to look at a letter to the UN, I told him I'd look at it and post a reply in General. Now I have. There's no big conspiracy there.

Also, there's no "hijacking." Look back again, I wasn't the one to bring up climate change in these threads.

Like you, I replied to it. I have an interest in the issue, as apparently you do, too.

You're welcome to join us in general. I don't bite, much, but I can't speak for Don. :^)

Cheers,

-Jamie

As per Chuck's thread, it's important to realise that a massive number of the changes which will reduce climate change are beneficial regardless of climate change.

Things like better house insulation and design, more efficient appliances, solar and wind power etc all have benefits on many levels whether climate change exists or not. Pretty much all of them cost less in the long term. They use less resources in the long term (and whether it's in our lifetimes or not we WILL run out of naturally occurring coal, crude oil etc eventually. In many cases it takes extra effort to begin with, but this effort does return in the long term. It seems odd to be passionately against such things.

Not that you are, but I guess I can't see why everybody can't band together on things when we agree on the direction, even if we have different reasons for wanting to head that way.

Cheers,
Kim.Jamie K <Meta@Dimensional.com> wrote:
>
>Neil, what's up?

What's up? Well... "Up" is a Shania Twain album:
<http://www.amazon.com/Up-Shania-Twain/dp/B00006IX86>

Or a Peter Gabriel album:
<http://www.amazon.com/Up-Peter-Gabriel/dp/B00006F7S3>

Or, apparently, also a relatively obscure band from the last decade:

<http://www.allmusic.com/cg/amg.dll?p=amg&sql=10:hzwfxqujldhe>

Or the URL for the Union Pacific Railroad:

<http://www.up.com/>

Or, also the URL (with a different suffix, of course) of the university of Portland:

<http://www.up.edu/>

Or, shorthand slanguage for Michigan's Upper Peninsula (The "U.P." - kinda like "The O.C.", i guess.)

http://en.wikipedia.org/wiki/Upper_Peninsula_of_Michigan

<http://www.uptravel.com/>

There, read all that shit & get back to me with a response, willya? I mean, it ALL must be true, because I saw it on the internet, right?

(look familiar???)

<SQUAK!!!>

(was that a parrot???)

>Also, there's no "hijacking." Look back again, I wasn't the one to bring

>up climate change in these threads.

<rant>

No, Don brought it up- jokingly... and you opportunistically stepped in as you always do & took over the thread to the extent where (and yes, sure, people responded) the entire board was nothing but a giant global-warming thread. Now I don't care if people talk about politics here, or religion, or DeeJay's dogs, or their health, or their enjoyment of the chronic, or goddamn near ANYTHING except when YOU get involved in anything relating to an extra drop of rain falling in Sumatra this year, because without fail, NONE of those other topics ever takes over the whole fucking board, but without fail, you always somehow manage to. Those other non-musical topics are peripherally interesting and always transient... you get a thread going & it never fails to fucking turn into a thread buildup akin to something like we've seen here since

the shitstorm that proceeded our buildup to the invasion of Iraq. No shit!
</rant>

Now, if someone wants to scold me on my rant - game on, let's go.

NeilAnother really nice performance from our Mr. Rod Lincoln on the percussively-smacked-thingies.

Probably a little on the "overcooked" side in terms of compression & some channel EQ - just a quickie rough, really; mainly posting it for your percussively-derived enjoyment.

<http://saqqararecords.com/MiscAudio/Conquest1stRoughW-RLinco InDrums.mp3>

....fuck, I used the term "overcooked" - opens the door for Jamie to turn this into another Global Warming thread.Nice idea Chuck. If we're moving into politics mode we might as well try and make a positive difference rather than focus on our own differences of opinion.

* Things I'm Doing *

- (*) House now on full green power (wind I think - or solar)
- (*) Most of my most used light bulbs are now low energy fluros
- (*) Taking a bus or riding to work instead of driving
- (*) Generally put serious thought in before using the car
- (*) Car and home gas emissions compensated through tree planting
- (*) Started a compost bin to reduce landfill and retain fertilizer.
- (*) The main form of house heating is firewood, which is the lowest CO2 emitter so long as it is regrown.
- (*) Car converted to LPG which is 40% lower on CO2 emissions.

In theory with the house on green power and my other emissions compensated my actual CO2 emissions should be very low, though I do believe we need people who are able to be doing "better than zero" emissions and indeed I'm yet to compensate for my emissions up to age 34 or so, so I've got much work to do. ;o)

* Things I plan on doing *

- (*) Buying an electric assisted push bike. Close to no emissions and very convenient (the one I want folds up!)

* Things I would like to do but am struggling with *

(*) The house insulation thing is troublesome as I live in a rented place.
(*) As above it's hard to install local solar power in a rented house.
(*) I'd like to further reduce my landfill which tends to be higher than ideal due in part to the single person's "buy take away" thing plus not paying enough attention to landfill when making purchases
(*) Generally buy less stuff and/or sell stuff I'm not using so that the effort and resources invested in the items in my house are not just sitting idle.

It can be both a struggle and rewarding to take action on things like this. When I look at the above I know I'm doing better than many, but worse than I need to. It can be tough to manage your own habits as well, and I often find of a night that I'll have too many lights on simply because of bad habits. I'm increasingly trying to use a fairly low light setup based around the low wattage bulbs but still regularly find I've left lights on unnecessarily.

I have worked hard on actually turning around the way I look at driving though. I own a 29yo car, which doesn't sound very enviro of me, but what it does is that it ensures I consider driving to be a privilege rather than an expectation. I love my car, and love to drive, but I only drive when I have a reason. Sometimes I have things to transport, or a time limit, or whatever, and on occasion I'll just "splash out" and drive for fun, but the thing is that I do think of it that way. I rarely if ever get in the car without acknowledging what I'm doing in terms of both pollution and resource use. The car is big, loud, and heavy. It's hard to forget that exhaust is coming out when the exhaust is so loud, but I think that's good. It's on LPG (40% less CO2), has had electronic ignition added (probably another 5-10% reduction) and the engine is quite new. It probably only pollutes the same as a newly purchased large car, but being so big and old it reminds me that cars aren't real good for our planet.

And it's also worth noting that the process of building a new car creates about 1-2 years of normal driving pollution. By maintaining an old car rather than buying new, and then driving only rarely, it will likely be 5 to 10 years before my car emissions are equal to simply building a new car. So if you're careful about it and minimize driving an old car can be a wise environmental choice.

This is the electric bike I want. Worth checking out I think:

http://www.greenspeed.us/bionx_montague_swiss_bike.htm

Cheers,
Kim.

could have gotten the mix off the board, but didn't have enough time to sus
it all out.

This video is a over two years old and we'd only been playing the song for a
couple months. We've got the tune much "truer" to the original now. I can't
play the song anymore though without thinking about Brad Delp. From
everything I've read it sounds like he was genuinely one of the good guys.
It's tragic the way he left.

Anyway, thanks again for the kind words.

Tony

PS - That's me singing the high notes!

THINK NOT! ;>)

Seriously, I think it's great that you're "smallerizing" your carbon foot
print. It's a good idea for everyone just in terms of pollution, no matter
what side of the debate you're on. I have switched over many of our lights
bulb to CF's and installed energy efficient windows, but there is much more
I could do. My fear is that the average person will do little or nothing
simply because it requires too much effort. I think it's true that
individuals can be pretty smart when they need to be, but large groups are
generally ignorant. As Ronnie James Dio so elegantly put it when singing
with Black Sabbath, "The Mob Rules".

I'll try to have a more positive outlook.

That's not a dirty deal... that's a caucus - that's how they work (by the rules of a caucus, i mean).

NeilDirty as it seems to us citizens, that's the kind of manuevering that a candidate better have to survive in DC and be able to execute coordinative efforts.... otherwise it'll be 4 years of gridlock in the fed.
What's most disappointing to me is that it's come to that over the years.

As Ronnie James Dio so elegantly put it when singing
> with Black Sabbath, "The Mob Rules".

dang, and I thought it was "evil", "woman" and "lookout" all these years.Me:

- 1.) Live close to work... still drive, but very short commute.
- 2.) I use bright white halogen lights in the living & kitchen areas of the house - sorry, can't stand those farkin' flourescents (not to mention, I don't want the mercury outgassing), but with the pure white light from the halogens, I need less overall wattage.
- 3.) I have refrigeraged air, not evaporative cooling (which is popular here due to the dry climate); while refrigerated a/c uses more electricity, it uses ZERO water, which is a big concern here, as we're in the desert (environmental impact varies from region to region, dunnit?).
- 4.) I have no grass in my yard... it's all Xeriscaped, using almost 100% native plants that require very little water.
- 5.) Double-pane, argon-filled windows in most of the house; solar glass on the windows that aren't in the above category.

6.) Cellular blinds on the big south-facing bay window (cellulars help keep the heat or cold in or out, as appropriate for the season); cellulars about to be ordered for the solar-glass 18-foot "window wall" in the studio.

7.) Energy-Star certified washer, dryer, fridge, and hot water heater.

8.) Passive Solar roof panels for heating the pool, as opposed to a gas heater.

And, most importantly...

10.) Try not take take three massive SUV's full of people everywhere I go, and especially when I go to the airport to get on board my private/chartered jet, which belches out more carbon-based exhaust each trip than any 50 American households combine to emit in a year, while on the way to a speech in a hall that requires 20 or 30 households' worth of annualized heating or air-conditioning - depending on the season - for each one of my appearances, along with about 45,000 watts of combined lighting & PA power for the duration of my speech; and then go back to my ginormous, energy-inefficient home that's so old & leaky it has an "R" factor of like "0.2"... oh wait, that's not me - that's Al Gore, environmental hero.

:D

oh. Ok. Here's what I've been doing for years.

1) Only turn on the heat when I get sick. Went two years without it on a while back. Other years waited until January or February.
Of course, I don't live in the snow like you guys do.

1a) Ignore the fact that I have an air conditioner. Not easy.

2) Buckets in the shower. Catch all the water you can when you take a shower.
Use it to flush the toilets.

3) Only use cars that get more than 30 mpg.

4) Speaking of water, lawns are useless relics of English gardens or African veldt or some such. Not needed.

5) Car gets washed each time it rains. Other than that, who cares

6) Never buy anything new that I can get used

Things I haven't done yet, because I'm too lazy or cheap:

- 1) replace my computers with laptops
- 2) replace my monitors with flat screens

I'm sure there's piles of others things...

-steve Good ideas, but what's this got to do with signal-to-noise ratio?

>Intersting note about CF bulbs

No one has actually determined whether there is a real overall savings with these things as they cost more to make, ship, dispose of and buy. And if not used in high traffic areas that need light on for long periods, do not last as long as claimed. I know this last bit as fact as I replaced every light in our house that wasn't on a dimmer and several of these bulbs lasted barely six months...others on the otherhand are on their second year. Good thing they go on sale every once in a while otherwise I'd never use them again.

>hahah, and John Edwards has a 30,000 sq ft house and Al Gore has a \$2000 electric bill every month. What a bunch of hypocrites. Is there a third choice? hmmm, Chucky getting moody. Maybe from eating ketchup from foil packets. Hi John,

Sorry for the comment, it was unnecessary and rude. Moody is the right word, maybe even asshole at times :-)

Chuck

"John" <no@no.com> wrote:

>

>Is there a third choice? hmmm, Chucky getting moody. Maybe from eating

>ketchup from foil packets. Don,

Here's my experience. The last set I put in the basement lasted five years. When I bought them 5 years ago they were big money. Probably 10 times the cost of an incandescent.

When I went to get the replacements a pack of 8 GE CFs was around \$12.00. I was shocked at how much they have come down in price.

The 60 watt equivalent uses 13 watts.

So anyway... My house has a basement apartment in it, and has a separate electric meter. We use the basement for our 'playroom'/tv room/office.

Since switching to CF and LCD TV and Computer monitors the basements monthly electric bill comes in around \$15 a month. It used to run in the mid 30's.

Granted this is not that big of a deal money wise, but I'm clearly seeing a directly measurable cut in consumption of over 50%.

Also, if one killed oneself by throwing oneself into the ocean with concrete

tied to oneself, then either one would be eaten (net zero carbon) or one would sink (net negative). But that's a bit too much to fit on a t-shirt.

>by the way, that's my song and I'm playing everything else."
>Your songs are good, you should be proud.

Well, thank you, but a couple of things along that line:

First, I've been working on this batch of songs for some time now, and I've posted links to earlier versions, so the point of posting these is specifically to let people hear & enjoy the new drum parts. Further, I know this Proggy-type stuff is not exactly everyone's cup o' tea, so again, I'm just trying to give a fellow board-member some props, so that's why i'm mentioning the drums specifically - 'cause I think everyone can enjoy a well-played track in any genre. And, finally, it's never been about me, it's about the song & the arrangement - and occasionally when I've posted some stuff that I've produced for other people, it's been about the recording and/or the mix. Heck, I'd love to NOT have to do all the tracks myself... while I enjoy the process of composing all the parts & putting it all

together like that, I'd LOVE to have other people do - well, frankly, everything but the guitar parts. Around here, though, it's hard to find people that a.) have enthusiasm for this type of music, and b.) can actually play it. I know a couple of killer bass players, for example, but one of 'em is in like three bands, plus teaches music & also plays around the Southwest for a couple of those nostalgia touring acts (like The Platters & someone else, I forget who) who basically take their singers on the road & then piece together different bands for each regional circuit they play in, so he's got no time; and another guy who gave up all other types of music altogether & now just plays bass in his church band. Shame, IMO, because it's not like he was in some religiously-offensive death-metal band, he was a fusion guy, ferpetessakes! Keyboard players - I know of none around here that are into rock - there are actually a couple of really great jazzers that I know that I could probably persuade to do some stuff with me, but unless I want that whole "Jazz-Salsa" flavor to infiltrate my music, I can forget about that option. lol

>except I don't like synthesizers much, but that's just me
>bein' a throwback.

<cue raspberry sound effect aimed at Sarah> lol!

Excellent! I wish my experience with them was more like yours in terms of reliability and savings but we are such big users of electricity in this house it's hard to say just how much we're saving.

Please don't get me wrong Kim, I'm all for maximizing energy savings, reducing, reusing and recycling etc but that is not what Jamie and I have been discussing...I'm firmly on the side that says Human generated CO2

driven global warming is not the slam dunk the enviro-movement would have us believe. We've had good luck with CF bulbs, overall. We had a couple of early failures (within 2 years), and a couple that have lasted longer than their rated life and just won't die. The rest are still cruising along so we'll see how long they last. I think some brands are better than others.

Even the duds have lasted longer than an incandescent heat bulb (I hesitate to call incandescents "light bulbs" since they put out more far more heat than light).

Energy Star lists CFs as being about 75% more efficient and lasting 10 times longer than incandescents.

Quote: "If every home in America replaced just one incandescent light bulb with an ENERGY STAR qualified CFL, in one year it would save enough energy to light more than 3 million homes and prevent greenhouse gas emissions equivalent to those of more than 800,000 cars. '

They do make dimmable CFs, but I haven't tried those.

I'm keeping an eye on the progress of LED lighting for home use. It's getting brighter and coming down in price (still more expensive, though), and offers the potential to do color mixing.

Cheers,
-Jamie

that pops up about some bad cue that it just won't let you go any further.
If you click on "OK" it just pops right back up again.
In the past I could never figure it out, so I would hit ok and instantly
quit Paris before it would pop up again. Then create a new project and just
drop and drag all the files into it. What a pain that is!
I have posted my grief here a couple of times before and most of you have
seen this problem so many times that it becomes a broken record to you but
none of the suggestions I got really ever did the trick.
Here's what works every time now: I hit "A" to bring up list of audio files
and scroll down until I see some greyed out files that still have the green
bars to the left of them I am guessing means they are still active, and just
delete them. Man that felt good to com across this. It has plagued me since
I bout this first Paris system in Wisconsin.
Cheers!

>>ChuckChuck,

While this isn't an exercise, one thing I have both noticed in my own experience,
as well as hearing of scientific support for, is the idea of not practicing
for an hour at a time, but instead doing several shorter periods as a general
approach. The mind has a very limited attention span at maximum focus, and
practicing while bored and/or annoyed with the process is not that beneficial.

Generally when I practice I will just sit down and play as I feel like it.
Ten minutes later I'll get up and do something else. Practice becomes like
a cigarette break. If I'm doing housework, every half an hour I might stop
and play one or two songs. If I'm inspired I'll keep going but if not I get
up and go back to whatever else I was doing.

I don't remember the exact numbers, but I believe it was something like three
ten minute practice sessions are measurably more effective than a single
one hour session.

Knowing this might help you manage your limited time better. Not only can you put less time in, but it's a lot easier for most people to find five or ten minutes a couple of times a day to quickly jump on an instrument than it is to find a solid hour. Playing in the ad breaks while watching TV, for example, you can probably approach the same benefit from an hour of TV watching as you would from an hour of practice.

You do need to put in longer sessions at points, if only to improve playing stamina, but things like scales and arpeggios only take about 15 seconds to do. You can do quite a few of them in just a couple of minutes. Plus, if you do, say, two five minute sessions in the morning, and then another four or so five minute sessions through the day or at night, the brain actually prioritizes it better because it gets the idea that "Gee, I seem to be doing this all the time!". Your brain gets the idea that it needs to have those skills ready because they are constantly needed.

Cheers,
Kim.

>ChuckI find this to be true as well, but mostly for maintaining a certain level
of facility. To make a big jump, I think the only option is out there in
the woodshed.

Sadly, I haven't had time for that in years. I pretty much play at that level where one can't play any worse. Luckily for me I put the time in when I was younger so that's not all _that_ bad.

When I was at ECMM last week I was looking at a Charlie Christian book thinking, 'I actually used to be able to PLAY this stuff.' No more . . .

>Hey folks,

I've got a couple of YouTube videos as well (go figure...).

Saerch YouTube for "Probable Cause Eruption" and you'll get a couple of links. One's me performing the VH solo piece and another is us performing American Band by Grand Funk RR.

Let me know what you think!

> SteveI purchased a 5 pack of the Sunbeam bulbs, 4 out of five burned out with in
a few months.

There was a news story a while back about a lady in NY that dropped one on
a hard wood floor in her child's room. She called Home Depot to ask how
to clean up the liquid from the bulb, they informed her that she had to call
the EPA. The EPA told her she had to contact one of the companies on there
HazMat list, because the bulbs have mercury in them. The clean up cost \$2500.00.
So my question is why did our government let these bulbs come on the market
if they are such a health risk? Just think of what these bulbs will cost
all of us in bad health and expense when they end up in land fills and contaminate
ground water.

Just think, everybody is buying them.

Actually that would increase your carbon footprint, since, as carbon-based lifeforms, we start decaying as soon as we die, thereby gradually sloughing off all our carbon back into the environment. And don't even get me started on if your family decides to have you cremated!

Nope, it's too late for me to make a difference... you've managed to hijack the entire board once again, save for two posts... you've won.

NeilThad,

My post wasn't directly about reducing my carbon footprint, or global warming, but to how to reduce monthly expenditures.

Lessee, how so? You said one report on water effects was BS but you didn't ever say why you came to that conclusion. You said another group was wrong about your denier web site's bias but the only evidence you presented was from that very denial web site. Hard to be convinced by that.

> So far you have done nothing but insist my sources are shills for big oil
> and refuse to even read a single article or listen to an interview. That
> simple fact speaks volumes about you and the enviro-movement.

Did I miss something? That's not true on several levels.

You might have noticed that I looked at your sources. For what turned out to be your denial site, I read the overview and a couple of other pages, and commented on them.

As mentioned, I looked into the background of your denial site which turned out to have real connections to the fossil fuels industry. Your ironclad logic is that they say they're OK, and anyway they don't take much oil money any more. What a relief.

I asked for a specific link for the interview you wanted me to listen to from your denial site (is that too much to ask?). Still waiting on that. I'm not planning to listen to all the interviews from January just to guess which one you meant, sorry, Don.

And I'm halfway through evaluating the other thing, the letter to the UN, which I'll post in general when I'm done. But I do have a few other tasks to do today, ya know.

And since when did I become a spokesman for the "enviro-movement"? I'm just a guy who pays attention to the science behind the issue. I know it's geeky but I'm into climate science.

I happen to think it's ridiculous when people don't pay attention to the science, no matter what agenda they are pushing.

Cheers,
-Jamie

ke where I would slide off e# to e or g# to
g. I had to switch to moving rapidly between two flats (a# to b#) instead
of sliding from black key to white with a single finger. Totally unnatural
for me, but after a week or so I got to where I could play the tune well
in a country/bluesy style in f#. That got me thinking - why shouldn't I be
able to play it in any key. And that got me to where I am now :-)
