, I never had the adat card behave so well as it does now. This
is so sweet. I will never need Windows 98 again!

Cheers!

Mike

>Hi Tom,

Thanks for the kind words. it's pretty cool transferring an ADAT tape in XP right now.

Unfortunately, I don't have 2 ADAT cards to test that problem specifically, but I debugged the shit out of the PSCL and the adat.dll to fix this. I don't think there is anything that would cause only one card to be recognized.

I think it's more likely that it was pure luck whether a slot responded fast enough to load the old driver. It was just unlikely that there would be two. My machine didn't even recognize my one.

If that bug persists and someone wants me to debug it, I'd happily accept an ADAT card. :) But, I think everything will be fine as it is. The PSCL loads the driver for each slot one after another in two steps. It's pretty "civil". I think the adat.dll was just not waiting long enough for slots to respond to its requests. It was also scheduling a "guard" thread that canceled requests if they "timed out." The code for that is in the PSCL and seems to be badly broken. I'm working just fine with it disabled. :)

The best part is that this is an improvement over the 98 driver. I used to have to unplug and replug my ADAT and swear at my ADAT card in 98 to get it to transfer a tape, probably because of that crap guard thread. This pretty much just works.

Life is good. :)
