i/o?Yes, the 24 bit .paf file will have 20 bits of resolution... still
better than 16.

David.

Justin wrote:

Stereo awesome.

"Dimitrios" <musurgio@otenet.gr> wrote in message =
news:430f5e4e@linux...

The way I do with wires is:

I pout wire out on AUX 1

Then I put every aux on every drum track same level so to have the =
same

drummix as the channel faders.

Then I open a new channe

Gary, it just isn't so. ID does not ask religious questions. it asks scientific questions about the claims of Darwinism relating to life's origins and existence. Creation Science attempts to derive a complete scientific worldview from the Bible.

They are very different.

ID will not necessarily lead to any personal belief, but it is carving deeply into the Naturalistic philosophy that is at the heart of much of their version of science.

Here is a response:

Sunday's New York Tim

I thought they did, and to be honest, I can't think of any reason why they
would work any other way. I guess that shows how much I know about this. I
did see some commercial the other day for something that recharged the

battery every time the brakes were applied. I thought this to be rather strange.....charging a battery on the downside of the motion. I guess this might be a good thing for city driving though, since the brakes are used a lot. Not so good for highway driving. We need these engines on the big long haul trucks too.

;oP

>I love it when you quote the LA times. This is like having a bucket of biased shit from which to draw any time someone wants to *sling spin* from the left. Hell yes, we're in a war and it does take funding from other places. This cute little graph you show could likely be used to show the same thing done by other presidents for New Orleans or any number of other things. Let's create a graph to see how many times Clinton made an effective move to proactively protect this country from terrorist threats while we're at it. The graph would never show a spike. Perhaps he could get Mark Rich to donate a couple of the mone that he made brokering oil deals for Sadaam during the thime the UN had him under sanction.

(quote from AP article in the King county Journal on Sept 1)

A senior Corps commander discounted the notion the disaster could have been averted by full funding of projects such as new and beefed up levees to protect against hurricane surges from Lake Pontchartrain and improving pumping and drainage capacity in New Orleans.

"These (projects) were not funded at the full ability of the Corps of Engineers to execute the project," said Lt. Gen. Carl Strock, commander of the Army Corps of Engineers. "But the important question is, 'Would that have made a difference?' And my assessment is, no, it would not."

But Strock did acknowledge that more funding for the Southeast Louisiana Flood Control Project would allow the Corps to more quickly pump out the floodwaters inundating New Orleans.

"Had we had the SELA project finished ... we could more efficiently move the water out of the system because it's a big drainage project," Strock said.

Other presidents also have taken aim at the Corps' budget. President Carters' first veto came against a big water projects bill passed by a Democratic-dominated Congress. And President Clinton squeezed the Corps budget as well. Doing so frees money for other White House priorities.

"I fought every ... administration when they tried to use the Corps of Engineers as a piggy bank to pay for other projects," said former House Appropriations Committee Chairman Bob Livingston, a Louisiana Republican who represented the New Orleans suburbs for more than 20 years. "I had major battles with the Clinton administration."

"Going back to Carter. They've all sought to draw down the Corps of Engineers and put it elsewhere," he said.

(wetlands included), but developers hate the idea, and an expanding
population isn't conducive to it. Catch 22. I just don't buy that saving
wetlands would have done anything to save New Orleans from a hurricane.
Save cranes and other water fowl? Sure - cool. The city? Not a chance.
If only it was that easy. The real answer is convincing people not to build
houses on "sinking sand" on the doorstep of powerful ocean. Knowing human
nature, we'll never learn.

Regards,
Dedric

> I'll be the first to call Bush's hand when I see him do something that is
totally out of line to my way of thinking rather than immediately blaming
him for things that may be the fault of others.

I don't think that everything he does is perfect by any stretch. I just
don't immediately assume that those who are automatically in *full hate
mode* have any immediate validity to their views. Listening to these folks
does nothing more than give most reasonable people pause, rather than do
anything to convince them that he has done anything like what he is accused

of doing by interest groups whose entire *raison d'etre* is to hate Bush.

This is one major reason that the Democrats lost the presidential election. People like you and Howard Dean show up to the party dressed in your insane clown suits and immediately anything you have to say is discounted due to your demeanor and previous track recordand that's a shame because everyone should have a say. When you sound like a broken record spouting the same old party line, your say isn't taken as seriously as it might be if it was based on actually trying to see both sides of an issue.

Hybrids seem to be a stop-gap solution to me, not longterm, but I'm up for

anything that doesn't use gas at this point.

>I think the discussion here, and the actual situation in New Orleans at hand is that the levees broke, and wetlands had nothing to do with it - the Lake just exceeded capacity - a hazard New Orleans has always faced - building a city below sea level is a nightmare waiting to happen, unless you build 100ft high, 100ft deep concrete barriers all the way around.

Wetlands are not a sufficient barrier between a city and water, and the fact that part of New Orleans was built on filled in marshlands doesn't help - saturated ground, surrounded by water, below water line is prime territory for flooding - it's only a matter of time. There were many articles and speculation that New Orleans could not survive a major hurricane - the city was living on borrowed time unfortunately. All the political blame in the world won't change the fact that this disaster happened because of New Orleans location. Blaming the government for this disaster is no more grounded than blaming a the secretary of defense for allowing a tornado to wipe out a farm in Kansas. Research also takes a bit of objectivity, both scientific and political.

I'm with you guys on environmental conservation - the more the better

I haven't heard Howard Dean for months, but somehow I sound exactly like him? Still waiting for an explanation for that one.

>Anti-Democrats (Deej, DC, anyone that mentiones Michael Moore or Howard
Dean more times than a Democrat actually hears from MM or HD)

Anti-Republicans (anyone?)

Anti-Bush (I'm running for the nomination, but I hear theres a lot of
competition)

Anti-Hillary (you know a bunch of people will be joining this party soon)

Anti-Clinton (the old party of the Anti-Democrats)There are several reports, including a National

Geographic article stating
that the levees were actually decreasing the wetlands in the Miss. river
delta, which are a natural barrier to storm surges. So in effect, the
man-made attempts to prevent flooding, contributed to it. The wetlands
decrease has been happening for 100 years. This isn't a recent
environmentalist vs. the government issue - it's man's own desire to build
where he probably shouldn't that eventually caused the problem levees were
built to prevent; it is also the natural course of changing coastlines.

\$25mil, or \$250mil - trying to stop nature is futile, but we continue to
try, and blame governments, lobbyists or activists when we fail. We are
pretty silly creatures when you think about it.
