---=_linux43841dc9--It's alright. I worked it out.

I now have a second group running which can't see the Paris group on the web interface, unless they go to the groups search and type in Paris, but ya know, what are the chances...?

NNTP users of this group will still see the new group appear, but they can ignore... ..or join in. ;o)

Cheers,
Kim.

Indeed he does, and is on the beta test team far as I understand.

He raves about it, and has demo'd it to me over many hours, and I must say
it is extremely impressive, and sounds great to my ear.

Cheers,
Kim.Dear Gene,
After a quick read I ahve some questions if you don't mind.
You record in DP using your Myteks at 96khz, right ?
Then you say you are submixing inside Paris... how do you do it when DP works
at 96 and Paris at 44.1 ?
I missed something here...
Next you are saying you though 20bit adat had some drawbacks , now it doesn't
have ?

Can you please explain how Paris adat now sounds ok with no hearable degradation ?

Regards,
Dimitrios
