y compensation on the busses since version 7.0
> or 7.1. They were rather late to the party, though.
>
>
> -Michele HobbsHi all,

I just got a few new toys for the studio, the M-Audio Project Mix I/O, Frontier Tranzport, and the Variax Acoustic.

I highly recommend the Tranzport if you are using anything like PT, Cubase, Logic etc. It's one of the coolest and most useful gadgets I've seen, especially if you are just recording yourself. I've been using it tonight in the vocal booth to do vocal takes.. very cool.
<http://frontierdesign.com/Products/TranzPort>

The Project Mix I/O is also pretty cool, although the master fader is completely useless in protocols. Haven't completely put it to the test yet but so far so good.

The variax acoustic sounds pretty good, but I was somewhat underwhelmed. I have a Seagull Artist acoustic with the Quantum II electronics <http://www.seagullguitars.com/electronics.htm>

(saddle transducer and electret microphone) that sounded better IMO plugged in and recorded than the variac did, and also feels better to play. That could also be part of it though. If the Variac was constructed better it would be more enjoyable. Fortunately that one was only a rental, so it'll be going back.

Cheers,

I think that's fixed.

You can do pretty much anything in Logic without stopping playback. I
don't think I've ever added tracks during playback, I'll have to try that.
