e handicapped voters I have heard speak about
this do NOT like being used to promote poor systems. They want secure,
accurate, voter-verifiably systems, too. It doesn't have to be one or
the other.

Where I live, the county uses touchscreen voting systems with no paper
trail. I have no idea if my vote is registering accurately or being
counted at all. I testified about this in the state leg. We made some
progress in Colorado but much more needs to be done.

Cheers,

-Jamie

DJ,

Ah but yes, if there's a Magma PCI-E card to support
the older PCI jobbers we use. =20

Face it. You have to have one.

PCI-E man. It's a no go for Paris and UAD-1 hardware, I think.

>The cool part is that you don't have 4 thick cables for the monitors, plus
extra cables for keyboard / mouse / USB stuff running between the machine
room and your editing space. Instead you have one nice light fiber optic -
without the (same) length limitations!

Plus, you have one video driver to work with. (Speaking from experience of
setting up AGP + PCI card - twas tricky).

ut once those
were tamed it all worked OK and I could hear the vocals and instruments
with no other monitors.

Except that I did bring a little powered Galaxy monitor just for my
guitar/violin as insurance, and I had it on a mic stand next to me.
Having never played through the PAS before I wanted to be sure I would

be able to hear my instruments. Probably won't bother with the Galaxy next time, if we use that system again.

Hearing other acts, the sound was OK out front. On the side I could hear more of the nearest PAS than the other two, pretty much like I would expect.

Based on that one experience

Thanks Steve the art guy!Hi Don,

I would get a magma no matter what setup you use if you are doing a 4 card system.

If you can still find them the Gigabyte K8ns Ultra 939 (NForce 3 chipset) and the ASUS A8V (not deluxe) (VIA 800 chipset).

They are all AGP with 5 PCI slots. YOur would have to do one of those Matrox AGP/PCI video card combos methods to get 4 monitors. Honestly I would say stick with 3 monitors using the Matrox P750. Allot less variables and resource issues going on that way.

I would avoid dual core cpus unless you are doing Cubase VST stuff on the same machine. The Athlon 64 4000+ or one of the FX series would be the best for number crunching a bunch of Waves plug ins. YOur also will reduce issues with the UAD and Paris not having a dual CPU setup.

For more current motherboard with PCI-E the best one I've tried is the ASUS A8R-MVP but like all new board they have at most 3 PCI slots. Try to avoid Nforce 4 chipsets if you are using UAD and TC power core. The N4 chipset in general kicks ass if you are doing native only.

Also try to avoid boards with to many convenient on board stuff. You will probably have to disable them anyways. Silicon Image SATA controller work nice on DAWS but the Promise SATA suck ass just disable from the get go. Most all the on board nics work great.

MOst all the new board do behave as soon as you start to put more than 3 PCI cards int he machine. Trying to put in 4 EDS cards would be hit or miss. The Magma 13 slot is the best one to get because
