Anyone (like Chris or Chuck, perhaps?) have an idea on this?
(see below).

>Good call Rich, it's tasty stuff.

We have several really good Thai restaurants nearby, including one of Colorado's best within walking distance. So if I get the urge for Thai it's easy to indulge. In the last year we've made it into a competition with some friends, each of us getting dishes from different restaurants and having a "Thai off" to see which is best.

So far, despite some tough competition, our closest fav remains the champ. Dedrick, DeeJ, Aaron and John can vouch for that one, we got together there during a local PARIS gathering sparked by one of DeeJ's trips to Denver, and Aaron made a special trip to join us. I think it was probably worth it for the Thai food alone. :^)

If you're ever in the Denver area, I'm always up for Thai!

Cheers,
-Jamie

>Well Thad, since you ask, yes, I turn off software update in the system preferences
on my Macs, I also use a software that installs at the kernel level, that
tells me if any software is trying to connect, which I can deny. With Mac
OSX you can manually or automatically check updates if you want, you can
go to apple's web site and down load any updates you want, but you should
already know all of this being that you network Macs and know all about them.

I've used XP sp 2 on other systems, I've never installed it on my system
due to the problems other people have had and the whole mother ship thing.

ally!)

Can you give me a description or point me to a recording of how your instrument sounds with your trick wiring as compared to the typical PRS? I'm trying to make a decision about whether to just order a PRS wiring kit from Stewart McDonald or order a 4 pole switch and a beginners course on electrical wiring symbols go for your sound. I certainly like the idea of keeping the gain up while thinning the sound, as you mentioned in your original post. Just so you know, we had what what supposed to be (never heard if it was) the windiest day on record in Melbourne the other day. A lot of stuff went haywire in this city (no environmental chats on this group though please ;o).

Part of it was that we went offline. I had some connection issues prior to that, so that didn't help, but that day was chaos here. I think we should be good for a bit, but the line still needs repair, so we may be on and offline for a few days until that happens, and the telco is rather busy fixing the chaos of course.

So I'm doing what I can to keep us afloat, rebooting the router etc, but I expect that the majority of the issue is resolved already, and we should be MOSTLY online from here on in.

Cheers,
Kim.I've never heard of a six slot but then again I don't get out much

Whew. I was going through MAJOR withdrawal symptoms. There was a lot of sweating, chills, and tremors happening here in Valpo.

This group is a drug. Plain and simple.

pabPaul Braun <cygnus_nospam@ctgonline.org> wrote:

Hehe. It actually occurred to me while it was offline that it might be a timely reminder of what we really have here. Sometimes you don't know what you've got until it's gone.

A nice time to remember that we should all be respectful to one another, no matter what the opinions and the topic.

It's sure good to be back. I just hope the connection holds out until the line can be repaired properly. At the moment we're still a bit unstable.

I'm about to sleep. I do hope we're still up in the morning. ;o)

But the server and history is all good. If we go offline again rest assured that we will be back online at some point soon. It's just a net connection issue with the line. We won't be losing the history or anything.

Cheers,
Kim.we'll weather the storm with you whether or not there is a weather discussion on the weather.

These are pretty hip. They use a one micron coating to keep the strings fresh longer and they seem to work. I've had them on for a few weeks and notice little tonal slip from where they started.

They do not feel exactly like the strings i normally use (D'Adarrio). They have kind of an elastic feeling, but i don't mind it. They also don't start as bright as most electric strings, but again, I don't mind that. In fact for my taste that's a plus. I usually keep the strings on my 335 style Ibanez for several weeks (I can get away with this because I always keep a wet towel on stage and between every 3-4 tunes I clean the neck and my hands), and the first night usually sounds over bright to me and I have to dial down my presence knob.

So for me these strings seem pretty nice. I hope they become standard on new instruments so when I demo a guitar in a store they don't feel and sound dead. That makes it very hard to tell whether an instrument sounds good.Cool. I was afraid it was a horrible April Fool's joke and that you might be back

Danny Russell. (not solo, not short, hi-fi). Effective combination of MIDI instrumentation and rock guitar with miked tube combo amps.

All the guitar sounds are real guitars through an assortment of small orphaned combos that I've accumulated. The single mic was placed close on the speaker in all instances, but positioned differently depending on the particular amp in use, and/or just depending on what I needed to hear on a particular track. The guitar tracks were basically recorded flat and dry. On a couple tracks, small amounts of corrective EQ were used to remove rumbling or booming noises from below, but not so as to shape tonality. Also on a few of the solos, a small amount of amp reverb was used, mostly just to loosen up my playing a bit. No direct was used on guitar parts.

Since I had the amp with me in the same room as the playback monitors, I had to throw a thick blanket over the amp and mic to muffle the volume and minimize bleedthrough. Only problem is that amp doesn't ventilate with the

blanket on. In two instances, I had an amp produce smoke while recording. That puts danger in the sound! You can't get that any other way. ...vocals on Head Around were sung through, and miked off of the same amp the guitars were recorded through (Marshall master volume combo). I sang into the amp using an ancient ('72) omni-directional condenser that came with my Sony portable cassette recorder that I somehow still have from when I was a kid."

Equipment was really basic. Nothing exotic. Mic is an Optimus 33-3018 dynamic, bought it on sale for \$19.95 (cheap). It's Radio Shack's crappy version of a Shure 57. The only difference is that unlike the Shure, it probably wouldn't withstand the high SPL's of close-miking real drums... Soundcard, I couldn't even tell you. I can't find a number on it anywhere, but it does say Yamaha on it. It came with my 'puter. It's really noisy, but I think I've managed to utilize that to my advantage as an additional warmth to the final sound. The MIDI voices were all generated in software via Yamaha S-YXG50 (came with the soundcard). few days previous that. Barely caught it, so I'm missing details that might help find info on the net.

Hi Tom,
It is a setting in your Boot.ini file.
If you have multiple PCI (especially UAD, TC cards) cards or 2 physical video cards I would not recommend using it.

The #gig switch 3 repositions the hardware/software memory address ranges. Normally it is basically 2gig/2gig but when using the switch it becomes 3gig/1gig. 3 gig being the software part.

IF you do want to try it then do it the safe way and add a second boot.ini entry. don't just add it to the main entry.

It should looks something like this: (DO NOT COPY AND PASTE THIS ONE!!)

```
> [boot loader]
> timeout=30
> default=multi(0)disk(0)rdisk(0)partition(1)\WINDOWS
> [operating systems]
> multi(0)disk(0)rdisk(0)partition(1)\WINDOWS="Windows XP" /noexecute=optin /fastdetect
> multi(0)disk(0)rdisk(0)partition(1)\WINDOWS="Windows XP 3GB" /noexecute=optin /fastdetect
/3GB /USERVA=2600
```

www.adkproaudio.com

chrisl@adkproaudio.com Hey Aaron - would you mind dropping me your email address? Got a couple

of DVD-related questions. Thanks! Bill,

I change strings nearly every other day on my electric because I really press hard and bend a lot and therefore it puts dents up and down the strings. I use light 10s-56. I'd love to not change so much and keep tone but how do I get around the wearing of the strings from bending?

Wayne

Wow, I've never seen
dents in the strings. Whadda you got for fingers,
c-clamps? I don't think these will prevent what you are running into.

A long (don't ask how long) time ago when I was playing 5 sets of disco
(alright, now you know how long ago) every night I changed a couple
times a week, mainly for breakage prevention but also to keep them
bright sounding.

I just finished the a PARIS version of the hall reverb from the DP/4. I'm not sure how much it was changed from the original when it was ported to the ESP2 chip, but it sounds incredible. You can load 4 instances of it on one EDS card.

You can get a copy at www.ensoniq.ca.

Next stop is the vocal plate.

All the best!

Woot, nice work! Wish I had my rig to check this out. Top of the
priority list though when the rig arrives; previously the PARIS verbs
were something I always augmented with external units.

Hi Mike,
I will be trying it asap! The plate has been my usual go to
with added eq and/or chorus from time to time. This sounds
like a welcome addition since I never liked the other verbs
we have to choose from. Four on one card? Not too demanding=20
either. Nice!

Thanks for the ambience,
Tom

-----=_NextPart_000_0020_01C896CC.42BD34D0--Hi Kerry,

I always used external verbs, too. I doubt I will again. I was digging through the esp code I've got, and I don't have an exact match for the expert verb in the DP/Pro, at least not according to the DP/Pro manual's parameter list. But, the collection clearly looks like a compilable project for the DP/Pro effects. It's a puzzle.

There is one reverb with 7 early reflection, and the DP/Pro manual mentions 8 for the expert verb. That's the closest match I can find.

Anyway, there are several reverbs, another hall, a room, a small room, and several plates. There's actually more here that I thought, which is great!
I also want to do the stereo pitch shifter.

I'm hoping to have the vocal plate out before the end of April.

Cheers to all!

Mike

My understanding is that that this switch can cause trouble with some drivers and requires that the program be aware of the switch. I'm not sure if there is any way to test whether a program is using the extra GB, apart from loading more than 2GB of stuff and seeing if the swapfile increases.

Hope this helps!

the plugins are all "pay what you can" feel free to pay whatever the upgrade is worth to you.

NoLimit was one of my first efforts - it was a lot to tackle at the time, but I agree that it's not as big of an upgrade as the newer ones.

Anyway, feel free to send me whatever.

Also, I just filled in a form to get past your spam blocker. Let me know if that doesn't work. your reverb is attached to the email I sent you.

All the best!

Sure, if you like. :^) The tea will sharpen your senses, which will naturally help you expand your quest to encompass ALL the scientific evidence. As decades of climate research come into focus, your mind will transcend the clatter of politics/emotion, contrived left/right extremist dichotomies, and other imposed and narrow distractions. And that's just with the first cup of tea.

The second cup brings true enlightenment and your head will begin to glow with wisdom heretofore unknown in the annals of Western history. I myself have never made it through a second cup, but I aspire, I do aspire.

At that point we can discuss solutions, which is where the real action is. Or we can discuss music, gear, dogs, why Mike Audet is a true PARIS hero, and such. It's bound to be a good time.

BTW, I'm headed over to the local electric vehicle club meeting this morning. Great bunch, with a wide range of reasons for being interested in EVs. The featured speaker is a battery researcher with news about the latest tech. Should be interesting.

OK we have the three existing Paris reverbs that were . . . ok. Plate being my favorite usually but not really that great without some = doctoring.

THE DP/4 HALL REVERB THAT MIKE PORTED OVER IS THE S & % T !

The DP/4 Hall is what we've all been waiting for as an EDS verb. A noticeable stereo spread with stereo inputs too. Sweet long tails, short tails without the 'ringing' , lots of easy to = use parameters for early reflections, panning, low end decay, etc..

There is no question this one is worth every dollar you can muster up.

Ha! that did sound funny. What I meant and I know you knew, was that the strings get what almost feel like notches at the fret area where I do most the blues/rock type bending actions. When I wrap and wipe the strings up and down the length with a cut up cloth "t"-shirt to remove sweat and finger gunk after a fun night I can feel little abnormalities in the strings. I can't see them but I can feel them. As a side note I also need fret replacement every 3-4 years.

That's about the same situation for me now. 5 to 6 sets a night in the

Nevada casino lounges. I can get 4 days out of a set if I play easy every night, but if we've got a decent gig I can grunge them up in two nights by bending and pull offs and hammer on's and sweating and by the end of the second night the 3 wound strings have lost their brilliance and the 3 high strings have notches. And for the same reason, change often for breakage prevention.

Since I currently change so often I purchase GHS Fatties at GC because I get them for \$2 bucks a set and I buy them in gross about 50 packs at a time, which will last nearly a year for me. I'm not particularly fond of these strings but do it for budget reasons. Maybe a string set at twice the price (\$4) will yield me a solid 4 days. A set at (\$6), a whole week! Yahoo, now were talking.

I do get tired of changing so often. Fortunately, I'm a creature of habit and I've got the whole polishing, string replacement and hardware check down to about 1/2 hour.

On my Martin acoustic I maintain strings for about 2 months, maybe 3/4 if I don't play it as much. I've got Cleartone on it at the moment and have also used Martin SP and Elixers. I'm on the fence on all of these. The Martin's are warmer and almost sound thick with less brightness. The Elixer's seem to change the tone just a bit to a brighter thinner sound and the Cleartone seemed to be about in between the two. If I recall, I think the Eli

Aaahhhh! The turmoil of USB in XP. This was one of the features in XP that Microsoft really hosed up! Most devices tell you drivers are included in XP for this device... yeah right! There is no way to tell if your port is 1.1 or 2.0 unless you have a motherboard manual or you can check the manufacture's website (like Dell). I have a Dell 8200 notebook I got cheap off of ebay... I upgraded the memory, harddrive and was planning to use this as a mobile recorder... I had a external notebook USB harddrive for large programs... to make a longer story short (and after tearing out 3lbs of my hair), I checked the Dell website and the internal USB port is only 1.1. My external drive enclosure was 2.0. I seen in the device manager that it was recognizing the USB device, but eventually would error. I later purchased a PCMCIA USB/Firewire card and presto! I worked! If you do have a 2.0 port and it is still erroring in the device manager, try uninstalling USB devices, reboot and see if it works... as someone said, windows tries to use the same USB driver on the last thing that was plugged into that port. Another stupid Microsoft wizardy crap here! But there is no easy way to check if the port is 1.1 or 2.0... however, there is a device you can purchase that will do this...

<http://www.passmark.com/products/usb2loopback.htm>

Hope this helps...

>Plug in a USB 2.0 device like a hard drive. Xp will usually notify you

>if it is aving to connect at 1.1
>
>JH

No it won't! It will just error in the device manager... you won't know it unless you open the device manager... XP does not tell you why it error'd, because it doesn't know. Also, it could be a 2.0 USB but still error (like with the 2.0 external USB notebook drives)... you have to sometimes uninstall other USB devices and hubs and let windows re-install them... see above!Yes there is... but I am unaware of a Apple crack or version. You would have to convert to a PC to get it to work...

One funny thing about Thailand, there are a ton of all girl pop and cover bands. I saw half a dozen seriously talented players in those bands, including a spectacular drummer who looked about 22 and just happened to be a stone cold knockout. Not only was she good she was tasteful, had her Charlie Watts licks down pat. Really cool to see.

http://www.m-audio.com/products/en_us/MicroTrackII-main.html

It's about \$300, street, plus CF card(s) and headset. Looks like it'll
handle XLR phantom powered mics if you have adapters to 1/4" TRS.

Not sure if there's an upper limit for CF size.

There are good reasons, starting with Nyquist himself, why higher
resolutions make very little difference.

I would nominate DeeJ but I don't know if he still has a PARIS system.
He's legendary for pushing it to the limits.

Maybe we should do a roll call and see who currently relies on PARIS.

I moved on to Logic due to PARIS MIDI support never being fully
developed, and PARIS never making the jump to OSX. But I did a lot with
PARIS when I had it, and what it does it does very well.

ADK Pro Audio
(859) 635-5762
www.adkproaudio.com
chrisl@adkproaudio.com On my old monitors I thought 16/44.1 actually sounded better..On the
dyns..I
can hear a difference..but really only A/B testing..Could be the plugs are
better at 24 too though.

> <http://www.aes.org/e-lib/browse.cfm?elib=14195>Well, I've been spoiled by all the nice flat LCD
monitors at the hospital,

so I finally got sick of the ginormous CRT in the PARIS studio and with some trepidation hooked up a nice 22" LCD. Much to my relief, it worked in Windows 98, and more importantly, PARIS seems to be running normally.

So I guess PARIS doesn't care what monitor is connected? What about graphics cards? I notice that the one in there is a Diamond Viper 330 sumpnerother, which is clearly not making the best of the new monitor. Anything I need to watch out for re graphics card compatibility? Or should I just leave well enough alone til we build our new PARIS machine?

Thanks,

SarahThe interesting thing is the pro audio guys guessed right only 52.7% of the time. Oddly, women, 10% of those tested, with their better extended hearing, got just 37.5% right.

All of the 60 people tested were either pros or audiophiles or college students in a well regarded recording program and all had their hearing tested before the program began. There were 554 individual tests using various setups. The final score was 49.82% correct guesses - not even 50%!

Well I looked all over for the timestamp setting in 2.01 and
couldn't find it. I did read the instructions regarding Chris'
post and I believe I already went through that stuff and installed
the ignoreportfilter last year when having a similar problem.

All I know is a changed a few Tranzport device settings and now it doesn't play a crash cymbal when hitting stop nor does the=20 midi data print later like before. =20

I guess the problem is solved. Now here's another.

I am using a new midi controller that seems to be outputting data = constantly.

The midi in light is going at a steady rate as is Cubase's data meter. = Cubase is not

sending time code or clock but is receiving it from the midi patchbay.

This looks like a bottleneck waiting to happen. It has crashed a few = times on it's own

too although not since the fix stated above.=20

I am confident it is not midi time code or midi clock coming from the = controller. =20

It is some kind of system message I guess. The keyboard is only hooked = up from it's

output so there's no looping going on either. It only sends very basic = stuff but

also wants to be hooked up to editing software via USB. I thought I = disabled sysex but

maybe not? I don't want to go there if at all possible. It only needs = to send note on/off=20

and aftertouch for the most part. No splits or anything elaborate.

Any ideas on this one?

Thanks alot!

Tom

"Bill L" <bill@billlorentzen.com> wrote in message = news:47fd29b1\$1@linux...

Sounds like the timestamp. Don't know version 2 but you should find it =

in the midi setup section.

-----=_NextPart_000_001C_01C89A95.D4CDA270--I under stand that it doesn't interest you,
 however there are some people
 that still use Macs here that might be interested. I believe Jamie, LaMont,
 Tony, Gantt, Gene, Nappy, DC, and others still use Macs.

Yes Final Cut server is geared towards Pro video. I also mentioned Logic.
 A guy I know that is a Logic certified trainer just got back from Apple
 and just sold me his personal copy of Logic 8 cheap, I'm thinking he knows

something. Next week is NAB. I wonder if they are going to combine everything in to one package???

>I think the coin toss stat, statistically, almost completely and absolutely confirms that there was no difference. As pointed out, the very small deviation from 50% to 49.82% is irrelevant given the sample size. If you tossed a coin 550 times you would usually see the same variation. To get precisely 50% is less likely than a small variation as seen.

If there was any benefit to either sound for any reason then it's highly unlikely you'd see a figure so close to 50%. Once again, the chances of them having added a piece of gear to just one signal chain which countered the advantages of higher resolutions with absolute statistical mathematical precision is far far less likely than the idea that people simply couldn't tell.

It seems quite plausible to me that the main reason that higher resolutions have been thought to sound better comes down to:

(*) You SHOULD mix at higher res than the master.

(*) Higher res (usually newer) converters are more likely to sound better than lower res ones.

(*) Newer higher res convertors are also more likely to be tested at and sound better at higher resolutions because that is what they assume most users will use.

These two factors in addition to psychological predisposition would come close to explaining the generally accepted belief that higher res sounds better, to my mind at least.

All I can say is that if there is any difference to humans, it seems to be amazingly small.

I would like to see similar tests including:

(*) Younger testers, perhaps early teens, young enough to hear better and old enough to communicate well.

(*) WAV vs MP3's / WMA / Ogg / etc. at different sample rates, and broken up into general public vs audio pros.

We all know that low res MP3's show a lot of artifacts, but I'd be very interested to know the point where the public and also audiophiles can discern a difference.

Very interesting stuff.

Cheers,
Kim.

help me, thank you. Just wanted to let you know
that I switched the audio from WDM to ASIO and that cleared up my click/pop/noise
issue. Sounds clear as a bell.

I do have a strange issue with my sound files though... I recorded an acoustic in Paris. I converted the .paf to a .wav. I imported into Sonar... now when I attempt to play along it is not the same tuning. It sounds like it's tuned down a 1/2 note or more. Is that normal? I never converted .paf files to place into other DAWs before and found that strange. Maybe something else happened, I don't know, but the acoustic file is un-usable. No big deal in this case... but I am hoping I don't have that problem alot. My son (who lives many miles away) and I plan to exchange files to build songs... but I guess converting them isn't a good idea... then, because of space, we were planning to compress them to a .mp3 or something. Darn, this little project may not work then....

But seriously, record a little of it and check it out in the list editor (Control G?). Then read the controller manual and shut it off. If that doesn't work, you can buy my MX8 and filter whatever it is.

 are among the
 least discriminating listeners in the marketplace as to sound quality.
 So it becomes fairly irrelevant.

sure the files isn't working as 44.1 khz in
Sonar.
A place in Sonar you can change the khz you wish to work with.
If you have converted some files for use in Sonar, be sure they will have
the same khz to work with, for both you and your son. It's normal the sound
will be slowed down as you're saying, when playing back a 48 khz fil as
44.1.

I posted it because guys like Jamie and Tony use FCP and possibly others.

Yes, FCS is geared towards pro video. FCS is a media server, so it can serve up audio content.

Just threw down a guitar part for an up tempo country tune and the
short verb on that thing just gave it the space it needed smoothly.
Perfect.

You gotta have it!
Tom

The author promised me a new upgrade for Faderworks tailored to us Paris users
!!!

This the page where you put all your plugins names and known latencies so
every time you put a plugin on your audio track you just push the om button
and all other Paris audio tracks get aligned !!

What else could we ask from a third party plugin developer ??

He first made a PDC for us when I kindly asked him so and then he makes this
update to make it even better for all of us Paris users (am I alone ??)

For all thos that have not bought Faderworks please do so to show our gratitude
because he will make our work with Paris so much easier !

DeeJ come on back we are waiting for you, jump on Paris again !

Regards,
Dimitrios
