card you are doing this on (in the global mixer)

send the aux to an output (it will still send despite the fact that the card itself is muted in global stereo bus)

Split that output

send one signal right back into the in of another card (since it is in realtime either live input, or an aux return)

send the copy through an analog comp. and return in the same manner.

your other auxes (like drum verbs, and even additional tracks) from the muted card can be returned the same way via analog chain (as with the drums), spdif (from one mec to another) or even an adat card from one mec to another.

I bought a DA16X to gain decent sounding outs which also provides me with great stereo outs for my monitoring.

Cheers,

Ted I'm reposting this because I can't resolve this in the original thread. In other words my mail server won't let me post this in the original thread, (CJG 5/11/2006 7:35PM).

Dimitrios, I'm not sure I understand exactly what your suggesting here. Correct me if I'm wrong. Anyone else want to chime in?

1. Choose compressor in say Aux 1.
2. Set Aux 1 in all the drum tracks to Pre Fader.
3. Send the return(s) of Aux 1 to an unused track(s), depending on mono or stereo or,
4. Patch the signal, with cables, physically out of the 8 out card and back into a free audio track(s)
5. Eq and automate your compressed drum tracks in the new track(s)

Do I have it right?

RichYou guys are just playing too damn loud :-)

Rich

got a bit smaller when he passed, and in the case of SSC, that's a fact, not just a nice sentiment.

I feel for his family, and for Edmund Pirali as well. I'm sure they are grieving. God bless them.

Best Regards,
Brian Tankersley

I'm just not getting this.....or maybe I am and just don't want to.

Maybe I need to get out more or something.I was working on a project the other day and suddenly discovered that all of my eds effect presets where missing. What happened? I am running paris 3.0 on an XP machine. Someone please give me some direction or solutions. ThanksSure miss ya around here dude. Come back whenever you want.

> Ted, I wonder if this would work for me? Here is the setup. I have a 2 card
sys with Mec on 1 card and 442 on the other (BNCed together). I have a 3rd
card stored in box (backup) along with a spare 442 and 2 IF2s. I don't have
a master clock gen to use a third interface so the spare 442 is out but I
was wondering If I could use and IF2 on the third card if I was to install
it to do the drum buss comp thing? I know you need a clock gen to do 3 MECs
or 3 442s but to 2 MECs and an IF2 plugged directly onto the third card,
anyone ever tested this?

Thanks

Rob
