If you feel =
that's disconcerting=20
try raising the right to level it out. This may decrease the =
effectiveness of the=20
process though.

Another way to get it to sound more present is to double
compress the track with comps in series but only reducing by 2 or 3db =
each.

Sometimes a third comp is needed along with level automation. The idea
is to not hear pumping but have a fairly steady state level to the =
vocal.

This will allow you to get it to ride on top of the mix without jumping =
out
to bite you.

"RK" <kent510745@hotmail.com> wrote in message news:43bc7a43@linux...
Trying to get lead vocals to jump out of the mix and I remember a =
trick

listed somewhere telling you to copy a vocal track to a different =
track, pan

tracks left and right, then reverse the phase on the second track and =
slowly

bring the fader on the second track to meet the other track fader at =
0.

Seemed to work, but the effects seemed to cancel each other out. Does

anyone use this, and if so, how do you get the FX to not whack each =
other
out?

RK,
Only apply effects to the +phase track.
Tom

like there is a
Steinway D sitting right here in my control room. I'm not a keyboard player,
but this thing may inspire me to go there. I'm flabbergasted!! Another big
surprise was that it's not a huge resource hog as I had expected. It uses a
lot of RAM, but they warn you about that upfront. As far as CPU usage goes,
it's a pussycat. I've got my RME buffers set at 64k and I'm streaming BFD
grooves and simultaneously playing the Bosendorfer mofofromhell piano with
the most sample layers and expression options enabled with the sustain pedal
working overtime and my dual core 64 4200+ CPU is hitting around 8-9% (with
1.35G of RAM being utilized for both VSTi's, Cubase SX and the system. Glad
I've got 4G of RAM though. The 7200 RPM dedicated HD is having no problems
with this at all. I was thinking that I might need to go to a SATA RAID
array in order to get this app to function correctly. If you're looking for
a VSTi piano, this would be one to consider if you've got the rig to operate
it or are considering building a dedicated VSTi box.

Man.....this is friggin AWESOME sounding!!!!I-rovy, huh?

;0)

RAID would probably make the difference if your MB supports it.
gNote to self: keep good notes.

El Miguel

ps. now where do I find those fricken notes?
