>Hey y'all,

I just installed Norton Ghost 10.0 and when I try to make a back up to
my external drive I get 3 error messages, I can't find anything out on their
site.

I get EC8f1787
E780001
EBAB03F1

Anyone know what these are?Hi,

Did someone ever blown an EDS with heat inside the computer ?
Box are getting hotter than when EDS have been made, I wonder if it can
work nevertheless.

thanks,

DamienEDS cards burn up easily if they get too hot. Keep a fan on them and monitor
hard drive temps to keep below 35C. Heat will mess you up big time. My
case is currently open in another room with a fan blowing on it, so I don't
hear the noise.

>First of all, it is a requirement to *be* retarded to do this so *feeling*
retarded is probably a good start. The next step would be to find a way to
DL all of the Vonage commercials and play them nonstop for three days
whilst meditating on picture of the Dalai Llama in a chicken suit. This
should create the headspace to move on to the next steps, which are:

1. Back up your Paris .cfg file.
2. Edit the .cfg file with the following line: UsehouseSync=1
3. Save and close the .cfg. file and reboot the computer
4. Open Paris from the Paris.exe file which lives in the C>Program Files>EMU>Paris folder
5. Set the sample rate to 48KHZ
6. Save this project to the C>Program Files>EMU>Paris folder under the name "default project" (quotes are mine-don't use)
7. Save the same project again under the exact same name to your desktop-this will be the one you use to open Paris, the one that is saved in the EMY folder is in case this one gets corrupted)
8. Close Paris and turn your computer off.
9. Set your house clock to either 44.1 or 48k
10. Power on any equipment that will be syncing to the MEC digital ports, boot the computer and launch Paris.
11. Flap your arms and cluck like a chicken.

>Hello everyone.

Time for a slightly "amateuristic" question again:)

I have some Waves 5.0 Mastering plugins and my plan was to use them in Pro Tools LE/Mbox.

When I started working on a stereo file I thought "what's wrong with my mix?" Obviously everything sounds like S**T through M-box compared to the Paris outs.

Would it be wise to send a signal out through the Mbox SPDIF and into the Paris SPDIF to take full advantage of the Paris DA's while monitoring the mastering session?

Or - does the SPDIF have some limitations that I'm not aware of?

Thanks!!

CJGI have 7.1 installed and still no luck

ent currently.

Wait, good news! Fox (who everyone knows delivers the truth) says there's
good news coming out of Iraq. I checked Pollstar but I don't see the Rolling
Stones playing there. Wonder what this awesome news is. hehe. Maybe it's
a new walmart !

>Ok, I am really wanting to crush a drum group.

Has anyone tried this? and if so is there a drawback?

Bounce a mix with just the drums on, or add a little bass and bring it back
in to paris on 2 channels on the same EDS card as the drums and basss of
course, and crush those 2 channels with say 1176's...seems simple of course
you;d have to start the bounce from ground zero exactly or there would be
phase issues.

Besides the extra step and watsed channels, is there a drawback?Do yourself a favor and use
one MEC to take stems off the ProTools :)

As for bleed, there is some but less than I expected...as for using them
with a vocalist it would depend on how loud they like their head
