some Nuendo tracks, some GigaSapmler
tracks, some Sonar tracks over and above the Soundscape tracks and mix all
of those together in the Soundscape-mixer.

3. In combination with the Soundscape Editor, you can run any other PC-based
Audio package. Through the Soundscape drivers (ASIO2, WDM, MME, GSIF2, Dwave)
all of these packages will "see" 48 audio streams In & Out of the Soundscape
mixer. All packages see all these streams through their own driver simultaneously
(no need to allocate certain streams to any particular package). This way
you can mix all of the audio applications with a zero-latency mixer with
zero-latency DSP-PlugIns in teh Soundscape mixer. In this mixer at the same
time you can integrate any VST effect. VST effect relay on PC power and introduce
latency.

If you have further questions, do no hesitate to contact me.

If you want me to issue a Quotation for a particular config, just let me
know

Regards,

Erik Wijnen
