news:44523838\$1@linux...

Hey Dudes and Dudettes...

I've got a project coming up that will necessarily include =  
orchestra=20  
and some other fiddly-bits that my synths won't do convincingly. =  
So,=20  
I've gotta get a soft sampler.  
Having looked at a few of the sample libraries like vienna and =  
kirk=20  
hunter, it seems to me that NI Kontakt 2 is the way to go. Now, =  
as some=20  
of you may have guessed, I a big steinberg=20  
fan...cubase/nuendo/wavelab/etc.. but having dld'd =  
an..ahem..."working=20  
demo"....cough, cough.. of Halion, I wasn't as impressed with it =  
as I=20  
thought I'd be. Wasn't happy with the interface and it seemed to =  
be=20  
pretty pretty demanding. I already \*have\* those guys in the =  
studio, I=20  
don't need my tools to all passive-aggressive too....lol

Before I shell out any actual dough for this cookie, what's you =  
take on=20  
the whole thing and, more importantly, on Kontakt/Halion pro's'n =  
con's.

cheers

jef

Steve> What does "sucked a valve" mean?

It's an old Texas generality meaning "I'm not sure WTF is going on until I  
look but copuld be either a broken valve, burned valve, a worn or broken  
camshaft, bent or worn out push rods bad hydraulic lifters or some  
combination of all of the above. It could be even worse.....crankshaft woes.  
All fluid levels are normal, but when I accellerate it sounds like a small  
jackhammer is doing a number under the hood. It gets louder until I get to  
between 2500 and 3000 RPM, then it stops when the automatic tranny shifts,  
then it stops....then when the RPM's have dropped below 2500 RPM, it starts

again. I haven't noticed any power loss, but it's not good, whatever it is.....so for now, it's a sucked valve. I did notice it blowing a little bit of blue smoke this morning, but it was cold and I was thinking condensation.

As I recall my ex had one of these SUV's and it started puffing blue at less than 100k, and apparantly ( her ex wrecked it for her... long story ) those motors have a bit of a history with oil pressure and spun bearings when I started asking around.

thought that was the reason. Then I added a WC and the sound changed a bit yet again. When I went back to ME, I noticed something that seemed a bit different. It wasn't significant enough to affect the way I was working and I thought it was just my imagination.

Nice you think about so.  
Can you say though what was your liking Me or XP ?  
Regards,  
Dimitrios

Aaron / Dimitrios,

Brian Tankersley used to say that the first EQ band (the yellow one) should always be used as a last resort, because there was a known bug with it. This was under WinME.

I remember mixing a project with him and seeing him EQ "backwards", using the yellow (top, EQ1) EQ for a high pass, and using the green (EQ2) for low mids, blue (EQ3) for hid mids and white (EQ4) for highs. If you look at the console view, this seems completely backwards from the typical layout on a "real" console, and I asked him.

He said that there was some bug that made EQ one unreliable at high boost / cut levels and that he really only used it for small adjustments when his other EQs are gone, or as a highpass for the channel.

The last time I worked with him, he was using WinXP and still was EQ'ing in this "backwards" fashion - I assume it was still because of this bug...

Sandy

DJ still testing, but I did a mix bounce on XP and then on ME, no fx but did have eq's on. about 30 tracks. I thought in totally nulled, but there is some difference Waaayy down there that became audible when listen with everything (Passive volume and Paris monitor knob) all the way up. But I'd say for all normal purposes, it nulled.

I liked the way Paris it sounded with XP as I was primarily tracking/mixing acoustic material in low track count mixes. I also like the sound I'm getting with ME, but man, it's been so long, and Alzheimers has started setting in now.

;o)
