How do you know it's the software & not the card issue like I mentioned? You still haven't said if you have the older version of the PCI card or not? I suspect you might.

You can switch to Reaper, or Nuendo, or Sonar if you want to, but if you're using a Multiface as your i/o box and your card needs that capacitor fix I mentioned, you're still gonna have the same problem.

Hi Neil,

I just pulled the Multiface PCI. It is v1.7. I appreciate the offer of a loan. Like I said before, the system works fine with projects that were created in Cubase SX v3x. Just not with projects that are created in Cubase 4, and if I take an old Cubase SX project and use it for a global template, it works, sometimes.

I may have to go back to SX3.0.2. I did a backup of all of my projects before I opened them in Cubase 4,

[View Forum Message](#) <> [Reply to Message](#)

just in case, since once a project is
opened (or corrupted) by Cubase 4, there is no going back to SX3x.

My problem is that I'm in the middle of a round of OD sessions and it's less
than convenient to to all this crap right about now.....but I guess I'll
have to.

You're still using SX, correct? If so, you might want to stay there for a
while. If I can figure out what's going on, I'll let you know. Dedric has
some good suggestions that I'm going to look into. I have a RAID 0 array
using two 10k Raptors on a SIL RAID controller. I've never heard of problems
with this controller, but I'm going to do some experimentation with using
another HD for this and see if that might be the fix.

Cheers,

Deej

, I'm not having any of these
issues with these I can work normally off my other 7200 RPM IDE
drive.....at least yet.

Hi DJ,
We ran into cracks & popping when we would transfer tracks from the Alesis
HD24(s) to then Nuendo 2.x . Those same tracks into Pro Tools or Paris, fine.
No pops and clicks.

Somebody at that time told us it was due to clocking. The Alesis HD24 tracks
were recorded @ 48k/24bit. We would set Neundo project to 48/24, but still
go the pops and crackles.

It was annoying.. So, we bypaased Neundo all together and used PT-HD..
True Story
