Barber makes better stuff than they other guys sell for much more. Seems reasonable to me.

Are you going to try one of the kits? Sounds like fun if you can make the time.

>>One of the greatest things about BFD is it's realism. I like having the raw, inprocessed tracks for processing in the mix. I also can understand the thinking that having preprocessed tracks can definitely save a bunch of time. the new BFD (and actually one of the older BFD add-ons) has these preprocessed tracks.

One of the things I hated about BFD was it's user interface. It just sucked, IMHO. After going out and trying EZ Drummer and Addictive Drums, these pretty much left BFD in the dust. As I posted the other day, using EZ player with BFD as the sound source did help things a bit as far as the interface goes.

I just ran across this video of the BFD 2 which is going to come out around mid November, most likely.

<http://www.sonicstate.com/news/shownews.cfm?newsid=5441>

This looks like what I've been waiting for. It can use my existing unprocessed BFD sample set plus it's going to have 55GB of new samples many of which are preprocessed and ready to go. It's got it's own onboard mixer and the individual tracks can be sent out to VST tracks in Cubase for further processing on channel inserts.

I was talking to Morgan about this yesterday and he's having a seminar on this up at ECCM as soon as they release the program to their distributors. Might be a good excuse for me to fly up to New England, rent a motorcycle, check out the fall foliage and then rent a Bradley fighting vehicle and head down to Manhattan. I need a vacation in the worst way. I wanted to go to AES and have some paella butnooooooo.....

;o)Does the Mackie "Oinker" series have analog outs?

>Hey Mike !!
Thanks !!
I have just donated some more for you...
I didn't have the time to check your final compressor version but am sure
its just as should !!
Regarding ducking how does this work on connection ??
Regards,
Dimitrios

>Thanks, Rob. I hope my post didn't sound ornery. I've been so excited about
doing this that I've been having trouble sleeping. I wake up for a second
in the middle of the night and think of a way to solve a problem with a plugin
I'm working on, and then I can't get back to sleep unless I get up and work
on it for an hour or two.

I'm really, really proud of these, though. I can't wait to get a couple
more done and move on to the driver.

All the best,

Mike

>Hi Carl,

Now that I can read the EDS assembler, we could (If I knew how to write VST plugins) port the effects to native form. That would be very cool. Time will tell. :)

>Yes.Ill give it a shot..but, I have to say that Berhinger pedals can hang
with a lot of big buck pedals out there..Yesm they are made in china, so
they can sell these pedals at rediculous prices..But, I American manufacturers
has to roll up their sleeves and at least get to the 50 percent mark of china
brand products..to get market share..I would buy a good pedal for \$50 bucks.
the Carl martins are a joke to me..Martin charges rack mounted prices(which
sound better) than any pedal.insane. That's why the Line 6 last pedal offering
did not fair well..cost too much for digtal bad sounding pedal..

Hey any time you can get what you need for cheaper, I am all
for it. My problem with Behringer is them re-silkscreening
a mackie 8-Buss and showing it as the new Eurodesk. and
stealing the whole circuit of some of Aphex' gear. I won't
use their stuff, but I will listen to you use it!

The Carl Martin stuff is real nice but expensive without a doubt.
They also have some exchange-rate issues I think.

DC

Thanks, Mike. You are appreciated.

And, after we get back from Vegas next week, I'll throw some money
your way. The little woman usually ends up in the black, so we should
have few extra shekels in the toy fund.

pabThanks Mike. Great stuff.

Could have used this last week. Don't like tracking with a de-esser, so this
will reduce the fatigue factor during
extended vocal sessions.

Haven't tried it yet, but a donation has been made.

Keep up the good work.

Kim

:)

I just got a copy of Code Warrior, and I'm hoping to get some Mac plugs going
as soon as they will compile.

I'm also hoping to get some sleep! I literally can't stop working on this stuff. My brain just won't leave it alone. I woke up at 6:15 this morning with a sudden realization that an equation in some comments was the algo I need to make a crossover.

I really look forward to hearing what you guys think of the deesser. The other plugs were all stuff I found and fixed up or combined. This one has unique code that I wrote in EDS assembler, so I'm pretty stoked about it. (Of course, I also grabbed stuff from here and there, too.)

All the best,

Mike

I may take you up on that. I just got a copy of version 9, but PARIS may need an older one. I'm emailing everyone I can think of to get some advise on how to make it happen. I'll let you know what I find out.

All the best,

Mike

Probably the best post/sound design tool yet.

Now I just have to find \$500 in the budget. ;-)

Thanks for posting the link Lamont.

>An email from a friend:

Recently, I was diagnosed with A.A.A.D.D. -

Age Activated Attention Deficit Disorder.

This is how it manifests:

I decide to water my garden.

As I turn on the hose in the driveway,

I look over at my car and decide it needs washing.

As I start toward the garage,

I notice mail on the porch table that

I brought up from the mail box earlier.

I decide to go through the mail before I wash the car.

I lay my car keys on the table,

put the junk mail in the garbage can under the table,
and notice that the can is full.

So, I decide to put the bills back
on the table and take out the garbage first.

But then I think,
since I'm going to be near the mailbox
when I take out the garbage anyway,
I may as well pay the bills first.

I take my check book off the table,
and see that there is only one che ck left.

My extra checks are in my desk in the study,
so I go inside the house to my desk where
I find the can of Coke I'd been drinking.

I'm going to look for my checks,
but first I need to push the Coke aside
so that I don't accidentally knock it over.

The Coke is getting warm,
and I decide to put it in the refrigerator to keep it cold.

As I head toward the kitchen with the Coke,
a vase of flowers on the counter
catches my eye--they need water.

I put the Coke on the counter and
discover my reading glasses that
I've been searching for all morning.

I decide I better put them back on my desk,
but first I'm going to water the flowers.

I set the glasses back down on the counter,
fill a container with water and suddenly spot the TV remote.
Someone left it on the kitchen table.

I realize that tonight when we go to watch TV,
I'll be looking for the remote,
but I won't remember that it's on the kitchen table,
so I decide to put it back in the den where it belongs,
but first I'll water the flowers.

I pour some water in the flowers,
but quite a bit of it spills on the floor.

So, I set the remote back on the table,
get some towels and wipe up the spill.

Then, I head down the hall trying to
remember what I was planning to do.

At the end of the day:

the car isn't washed
the bills aren't paid

there is a warm can of Coke sitting on the counter

the flowers don't have enough water,

there is still only 1 check in my check book,

I can't find the remote,

I can't find my glasses,

and I don't remember what I did with the car keys.

Then, when I try to figure out why nothing got done today,
I'm really baffled because

I know I was busy all day,
and I'm really tired.

I realize this is a serious problem,
and I'll try to get some help for it,
but first I'll check my e-mail....

Do me a favor.
Forward this message to everyone you know,
because I don't remember who I've sent it to.

Don't laugh -- if this isn't you yet, your day is comingLol!!!..I' was thinking the same thing.. Just last week, I was telling a friend that was not interested in another plugin!!..Now, I'm plotting the "Easy pay Plan" from American Musical Supply..That's 499.00 (3 easy payments of) \$166.00..

hmmm... sounds like a plan to me. :-)

I could have used Speakerphone last week when trying to match a dub to an actor in a kitchen.

Speaking of that....I just watched a few minutes of "Crash" on TV (saw it in the theatre back when it came out) - the overdubs to cover the language were full phrase dubs from the actors, but the ambience was way off, and obviously dubbed, even though sync was fine. Blatantly obvious. I guess there wasn't a budget for a copy of Speakerphone once they paid the actors... lol.

>Hey Nappy, my colleagues around town tell me that they are in love (again) with Logic.. And that, it's new workflow, editing, and even sound is much improved.

Some are having driver issues (M-Audio). Take a look on www.gearslutz.com they have forum thread just for Logic 8..

>Mike,

You have the fever. What you are describing is exactly what I went through a couple of years ago.

It took me over two years of searching, pleading and prying to get together the bits and pieces to be able to build these things.

Then a couple months figuring out the framework, and another month or so the ESP2 assembler. The fun really began when I started doing entire new control sets and uis to go with new plugs, sadly I was never able to release them. If we can figure out a way to get Bill Mauchly some revenue for everything he did for me/us, maybe I can pass them along and you can finish them off.

They don't need much work, and its a package of four really nice plugs, the highest quality algos and UIS possible for PARIS.

Anyways, keep it up dude.

On the Mac front, I was never able to get a mac build of anything, on any mac, or any version of code warrior, until Bill Mauchly mailed me an original Ensoniq PowerPC mac clone with the entire build environment intact, and a couple sample projects.

Please email me your address, it won't be immediate, cause I have to find the time, but I will give you this mac and ship it to you.

Chucknice one !Thank you soooo much, Chuck!!!!

I just sent you an email with my address. Let me know if it doesn't make it.

Ah, what the heck. I'll post it here, too.

Mike Audet
523 Downland Drive
Pickering, Ontario
L1W 3B1

Thanks so much!!!

I'll treasure it as a collector's item, too. :)

> ChuckThe biggest bug in the plugs was that I could never get the Precision Limiter
to work on multi card systems. There were some deep cover, bad voodoo bugs
that manifested themselves when the card streams were summed, and somehow
affected the limiter. I can tell you this, on a single card system I've
never heard anything that could do what this plug can do on the mix bus.
It was astounding. The other bug relates to using the keyed gate with wires,
but I think we'll have to live with those unless you can come up with an
alternative to wires.

Bill has paypal, so it should be pretty easy to get him payments. I used
to give him a cut of all sales back in the day because he was instrumental
in walking me through getting a build.

mastering limiter

The keyed gate, a gate that operates on a key signal from another channel

An audio destruction plug that allows you to change the bit depth, sample rate and add a pre and post eq that is the rawest paris eq ever. It's really for a specific genre that's looking for lo-fi effects. For example, it can do a perfect telephone connection, megaphone, etc. It can also add scratchy grit, alias effects, etc.

Fomr Matt Craig, both reverbs from the DP/PRO complete with 100% translated effects presets. These verbs get near sample accurate cancel with verbs from the hardware DP/PRO when using the same preset.

I'm going to start on the second half of it sometime today if I get the time. Hi Mike-

Sorry I didn't get back to you last night. Yes I can get you the kb, mouse etc...

Let me know when you're ready to go, and I can meet you somewhere.

>NappySo-

I've been sharing Logic with my Nephew, up until now when I decided to buy in with Logic 8.

Thing is- in Toronto nobody has the full (non upgrade) version in stock.

The 3

Apple stores have sold out 3 shipments, and don't know when they'd get more, and

all the MI stores haven't received the full version yet. But - they all have Express 8

and the Pro 8 Bundle upgrade.

Out of 6 stores I spoke with, only the Apple Store guys told me to just buy Express

8 and the Bundle 8 upgrade and install the Pro Bundle over Express. So I got the

full deal, I got it now and I got it for \$1 cheaper.

Express \$199 + Pro upgrade \$299 = \$498

Pro standalone = \$499

You'd think the MI stores would be smarter wouldn't you?

sheesh

TGHi Ted,

Don't worry about it. Chuck is going to send me the actual Mac the all of the Mac plugins were built on. Sweeeeet!

It's going to happen. :)

This was recommended to me by a friend and it is just wonderful.

It manages to be both tuneful and modern

(we have both kinds of music here! tuneful AND modern!)

and stunning, absolutely breathtaking, beautiful, and moving.

If you need a real change in your listening, get it!

Man, I wish I could write music like this....

DCohh..That hurts..\$\$\$

Turn it on and it stops right away with
"Initializing USB controllers"

Can't even get to the BIOS.

I do have a wireless keyboard and mouse via
USB. Batteries maybe? The only other thing
USB is the Cubase dongle.

Tom

-----=_NextPart_000_00FE_01C810F3.320C66B0--Pull the Cubase dongle & see if you still get that same error.

Otherwise, I doubt it's the batteries in the wireless keyboard & mouse, because you should still be able to get booted up under those circumstances, the keys and/or mouse just wouldn't x-mit a signal to the receiver modules.

Thanks Neil,
I unplugged both the Cubase dongle and the keyboard/mouse.
Booted fine with the PS2s that are also in use.
I am going to reinsert the USBs and let it find it's stinkin drivers.

I hate computers more than ever these days. Paris is down for the =
count.
Thanks again,
Tom

"Neil" <IOIU@OIU.com> wrote in message news:4716ab09\$1@linux...

Pull the Cubase dongle & see if you still get that same error.

Otherwise, I doubt it's the batteries in the wireless keyboard
& mouse, because you should stil be able to get booted up under
those circumstances, the keys and/or mouse just wouldn't x-mit
a signal to the receiver modules.

-----=_NextPart_000_0145_01C8110D.9C4C6B00--Dang backwards classical guys! <grin>

I found it on Amazon, but their listening system seems to be full of viruses. You click to play a tune and they try to give you an .exe file!

Anyway, if you like contemporary classical, but still like melodies, if you like Ives, Britten, Lauridsen or even Copland, you will likely love it. If you don't like any classical, then it is not for you.

To me, it is like breathing mountain air after a year in Burbank...

I just had to spring for another &*&^#!*(^% WC today. I've got so much =
crap daisy chained in my rig right now that I'm starting to have some =
problems with everything syncing up reliably. Part of it has to do with =
my Mytek A/D being part of the distribution chain. It doesn't get along =
with the RME MAD1 card very well. I found a good deal on a Lucid GenX-96 =
today so it's going to be my master clock distributing signal to 5 =
devices while it sends a WC feed to my regular Lucid GenX-6 which will =
distribute the WC signal to the other 6 devices. Now everything will =
have it's own separate WC feed and each device will be terminated.

It never ends.

;o}

"Tom Bruhl" <arpeggio@comcast.net> wrote in message =
news:4716c6c6\$1@linux...

Thanks Neil,

I unplugged both the Cubase dongle and the keyboard/mouse.

Booted fine with the PS2s that are also in use.

I am going to reinsert the USBs and let it find it's stinkin drivers.

I hate computers more than ever these days. Paris is down for the =
count.

Thanks again,

Tom

"Neil" <IOIU@OIU.com> wrote in message news:4716ab09\$1@linux...

Pull the Cubase dongle & see if you still get that same error.

Otherwise, I doubt it's the batteries in the wireless keyboard
& mouse, because you should stil be able to get booted up under
those circumstances, the keys and/or mouse just wouldn't x-mit
a signal to the receiver modules.

-----=_NextPart_000_00B6_01C81107.721D5F70--There you go DeeJ, it's 'wanking' when Don is losing an argument. But it's 'revealed truth' when he's winning.

If you want some really fun reading, do check out 'The Twelve Caesars.' There's a cheap Penguin edition you can get at Amazon. It's literally a great bathroom book. Sit down to take a piss and read about what Domitian did in the Colosseum. What Vespasian complained about to the Senate. That Octavian wore lifts in his shoes because he thought himself too short. And that's all without even getting into Nero and Caligula. And, there's some psychological insight as well, but you'll have to consult Don about that, he's the expert.

wank wank...

heh heh

Oh hey, I was just kidding. I really do think yer a smart guy...

On thursdays. for a wanker...

turn it on.

So the other day I hooked up the Atari (with Cubase Version 3 - 1992) to the Soundcanvas. Attached the ancient Roland midi controller. Took a while remembering the commands and how the files worked.

Stayed up until 3am last night making stupid tracks. It's so simple. No hiccups. Absolutely perfect midi timing. Monster 1MHZ processor into 2M of giant memory. Tried to hook up a real moonitor to replace the aging mammoth b&w 12" screen, but couldn't find the right adapter. Oh well. No problem.

I stood there with my headphones on and jammed to these stupid tracks half the night. Haven't had so much fun in I don't know when.

Ok, back to regular programming.

will de-clock... it's really very rare, though - maybe 2 or 3
times in the past year or so, and it's never de-locked during
tracking - where I've had two RME Multifaces, plus a MOTU 8Pre
& a Mucusrite ISA 428 - locked & clocked off of the Lucid. Not
saying that there might not be better clocks out there, but
that model seems to be pretty stable & reliable, FWIW.

Call 'em stupid if you must, but if they're anything like "Jeremy the Coelecanth" you KNOW we'll all want to hear 'em! :)

NeilWell, burn us all an mp3 & e-mail it, then, dammit, if it's so good! lol

I agree with Cron - we're almost 8 years into the 21st century - if we can't hear at least a good file segment, we're automatically not interested!

>Once they find the drivers (USB hardware) make sure you set a
system restore point - just in case something weird happens
after that. If it does, it probably has something to do with
some driver that's been installed AFTER the USB ones were
originally mapped/installed... my experience, at least, when I
had something kinda similar happen on my previous rig.
If this is the case, you'll need to find out what drivers you
may have installed after that & re-install them, as well...
ALSO: don't forget that you MIGHT need to de-install any
duplicate instances of RME firmware if you're using an RME
interface... an applet for this can be found on the RME/Synthax
site... are you, by any chance using any type of RME
interfacsia?

can you tell me where you put the cheese????.....If I can't get the MAD1 to clock to the Lucid, then I can probably get the Lucid to clock to the MAD1. the MAD1 has an extremely nice clock, but I like to be able to set the sample rate before I open Cubase and with the MAD1, it will default to the last sample rate it saw before closing the program. this creates a scenario where I've got to start pushing buttons on the various modules to create harmonious digital bliss and sometimes it will cause a trainwreck, at least the way things are clocked right now. Getting the Mytek into a slave role to the Lucid where it isn't directly interfacing with the MAD1 card will likely be the ticket. those two devices have never played nice. It worked fine with the HDSP 9652 and Multiface, but for some reason, Mr. MAD1 and Ms. Mytek ain't compatible.

Morgan had a similar problem with interfacing Mytek and RME MAD1 cards so it's a documented pre-existing condition.

;o)

I think I maybe should have mentioned that these appear in your system registry. They can also be edited out manually without too much trouble, but the applet is a much easier, one-shot edit & it seems to work well. Lemme know if this is the case & if so I can direct you to it or e-mail it to you (it's a free utility) if need be.

>OK, but Mytek & Lucid sync issues ain't necessarily a documented
pre-existing condition, are they (or are they?) If my Lucid de-
clocks or doesn't look like it's locking upon boot-up, all I
have to do is flip the switch through the cycles, back to the
samplerate I need & it's there/locks fine... does your GenX not
do this?

```

ALSO... your system is more sophisticated than mine - you might be a good candidate for some kind of front-end clocking & converting like the Lavry Blue series & their CrystalLock sync deal... even if you only get two channels of it for overdubs & such.

You know where -- into a giant dog!! I will say classical Beatles sound played up the modern way, as only

Macle can do, is the way for me to listen to right now. Marvelous recorded(I think it's Paris homemade recordings), so I've bought three records from them, just to have some gifts to old musician friends I played with in the sixties. I am listening to their album "Future Junk" now as I was listening to the Beatles in the sixties.

I know many of you here wanted to buy the Macle sound years ago, so here you can buy it with PayPal: <http://www.themateswebsite.com/>

>>nice one !bye bye paris, hello Cubase. Don't forget my notes site when you get going.

www.kfocus.com/cubaseDj, I haven't bought anything in a year ! November was my cubase system

purchase and all is cool. Get your stuff going and have a 1 year moratorium

on buying, hell, save for retirement even. heheOh god, now the dreams are going to start again

!!!!DJ, with my presonus digimax fs, cubase controls their clock rates from its

project settings. will cubase not do that with your devices? when cubase

opens the clock rates change based on my project settings.2007 ? Damn, now I'm way behind, I

thought it was 1967 and Sgt. Pepper's

Lonely Hearts Club Band just came out. It sounds fresh as ever compared

to the crap being pushed today.

It was twenty years ago today,

Sgt. Pepper taught the band to play

They've been going in and out of style

But they're guaranteed to raise a smile.

So may I introduce to you

The act you've known for all these years,

Sgt. Pepper's Lonely Hearts Club Band.

We're Sgt. Pepper's Lonely Hearts Club Band,

We hope you will enjoy the show,

We're Sgt. Pepper's Lonely Hearts Club Band,

Sit back and let the evening go.

Sgt. Pepper's lonely, Sgt. Pepper's lonely,
Sgt. Pepper's Lonely Hearts Club Band.
It's wonderful to be here,
It's certainly a thrill.

You're such a lovely audience,
We'd like to take you home with us,
We'd love to take you home.

I don't really want to stop the show,
But I thought that you might like to know,
That the singer's going to sing a song,
And he wants you all to sing along.

So let me introduce to you

The one and only Billy Shears

And Sgt. Pepper's Lonely Hearts Club Band. As The Mates/Macle are calling the time after that
with the title on
their CD, "Future Junk" ;-)

>The one and only Billy Shears
>And Sgt. Pepper's Lonely Hearts Club Band.I'm late to the party here but I suggest NEVER using wireless key/mouse, not even on an office machine. It's adding a layer of non-native drivers that can really cause problems. If you need more distance get USB extender cables (they're cheap) for the input devices.

>I was in an uber hip NYC restaurant last week and heard a track that really
took the cake. Run the first few bars of 'Corcovado' through your head, the
original Getz/Gilberto version. I have a soft spot the size of a truck for
Astrud Gilberto but even I have to admit the original has some kitsch built
into it. Now imagine an early eighties Chuck Mangione doing the song. Not
the sorta cool Chuck, but the hour long TV special with the orchestra Chuck.
Now, pretend that a bunch of young GenX jazz players who've never had an
un-ironic thought in their lives and who more importantly have NEVER HEARD
THE GETZ/GILBERTO version. These players have the Chuck version played for
them and are told to do a super lounge/kitsch version for a lounge compilation.
That's what I heard. It really did suck so much it was kind of good, I have
to admit, and I don't take kindly to anybody trampling on my Astrud.

-----=_NextPart_000_00B2_01C8117E.8FEC5200--DJ is using several units, and as distribution amps. I don't care how good a unit is, when you start using 3 of them things fall apart due to slight variations in clock sync. Better to use *one* clock with sufficient outputs to feed all the stuff at once.

My \$.02CAD (0.0205478 USD at current exchange)

David.

```

John/Neil

When I was using an HDSP 9652, I could use the Mytek as clock master. The MADI card will not accept the Mytek as clock master so I have to slave the Mytek to the MADI. This works fine but due to the large number of devices I have to also slave, I need to take an AES feed off the Mytek into my Lucid GenX-6 and then clock everything else from a simultaneous feed from the Mytek WC output and the GenX-6 that is being synced to the Mytek so the Mytek is still the central clearinghouse for the rest of the clock signal. So the current clocking is as follows:

```
MADI > Mytek
Mytek BNC>AES 32 (terminated)
Mytek AES>GenX-6
GenX-6>Multiface (terminated)
GenX-6> ADI 4-DD (terminated)
GenX-6>ADI 8-DS (terminated)
GenX-6>ADI 8-DS (terminated)
GenX-6>ADI 4-DD (terminated)
GenX-6>ADI 648>ADI 8-DD>ADI8-DD in a daisy chained config-(terminated)
```

This all works perfectly at 44.1 KHz but it goes to crap at 88.2 because the Mytek doesn't like to be slaved to the MADI at higher sample rates. The Mytek worked fine as master clock to or slaved from the HDSP 9652, but not with the MADI. It also works fine slaving to a GenX-6 so I'll likely have the following WC chain:

```
GenX-96>MADI card
GenX-96>AES 32
GenX-96>ADI 648
GenX-96>ADI 8-DD
GenX-96>ADI 8-DD
GenX-96>Mytek
Mytek AES out>GenX-6
Mytek BNC open for additional device
GenX-6>Multiface
GenX-6>ADI 4-DD
GenX-6>ADI 4-DD
GenX-6>ADI 8-DS
GenX-6>ADI 8-DS
GenX-6>Open for additional device
```

All devices will be terminated.

As I said, the Mytek locks up perfectly to a Lucid because the clock is set before the computer boots up but if the Mytek is problematic slaving/and regenerating WC signal for any reason, I've got enough BNC outs on both Lucid boxes to just slave the GenX-6 to the GenX-96 and get the Mytek out of the loop as a distro device. I doubt I'll have problems with this

so you see.....as with my Paris rig, I've managed to simplify things again with the new RME rig.

;oDA USB "extension" is barely usable at 15'... look for a USB "repeater"... much better and they can be daisy chained for additional length:

They work great (and are locally available for me...an unusual occurrence here in the land that time forgot.

;o)

David,

The only reason I'm taking the route I'm taking right now is because it has worked for me in the past and I had all but one device already here (the GenX-96) I got the GenX-96 for a ridiculously good price. I could EBay it and get my money out of it in a heartbeat so I figured I'd give it a shot since it has worked in the past. If this situation doesn't work, I'll be dumping the two Lucid boxes and looking at other options. Which rosendahl unit would you recommend? I'm not familiar with them. I will need "at least" 11 outputs on the unit.

Thanks,

DeejThat's great news Mike, Thanks.

This is the one we are using here:

<http://www.rosendahl-studiotechnik.de/nanoclocks.html>

12 outputs, works REALLY well. Attached is my digital signal flow for the room. Occasionally I use HD for system clock, or the WIF... The Nanoclock will generate clock or distribute from two transformer isolated sources.

David.

David,=20

That's the type I'm using. It's an active extension.

I didn't know they were called 'repeaters' though.

I need about 25'- 30'.

>Hi Frazer,

I'm all good now thanks, bad pin on my mec cable (thankfully).

Good to know your in the UK though (that makes 2 possibly 3 that I know of,
and the guy from emu that still has one!)

where you based?

PS sorry I don't have a spare 8 out card, I'm now using both of mine.

>I've been meaning to post about this for a few weeks, but didn't get around
to it, until the "lite jazz" topic came up.

Let me say straight up that to me "lite jazz" leaves "lite interest." If
any. I avoid it. I went to a friend's concert the other night -- I used to
go see him and his rock band back in the 70s all the time -- and now the
same guys were up there doing "lite jazz." No memorable melodies. Slight
arrangements. Nothing of interest. Ok. Disclaimer over.

A few months ago I was tasked to pick the arrangement off of Diana Krall's
version of Bacharach's "Look of Love." Since I live in a time warp which
resides several decades in the past, I hadn't even heard it, and thought,
oh man, what am I getting into.

Imagine my surprise when the arrangement bowled me over. A complete reharmonization,
but just as affecting as the original. In some ways, it's simpler. More linear,
more chromatic, but with simple triads. Folks into arrangements should check
it out.

Impressed, I googled around to find the arranger. Hmmm. Some guy named Klaus
Ogerman. In my ignorance, I wasn't even aware of the name. I checked him
out.

This guy is a monster. I found this site
<http://bjbear71.com/Ogerman/Claus.html#Index>
and was literally stunned. It looks like perhaps two thirds or so of all
the tunes I remember fondly from the past -- those lushly orchestrated things
that insinuated themselves into my brain at an early age - as well as the
great Jobim LPs -- as well as some of the Sinatra ones -- as well as, well,

everything -- were the work of this guy I knew nothing about.

Klaus Ogerman arrangements:

"More" by Kai Winding. "You Don't Own Me" "Maybe I Know" and "It's My Party"

"Breezin" by George Benson. Major LPS by Jobim. Michael Franks. Freddie Hubbard. Jimmy Smith. Cal Tjader. Stan Getz. Oscar Peterson. Bill Evans.

Just thought I'd alert some of you old guys who may have also had your minds warped at an early age by this stuff. You young whippersnappers, nevermind.

-steveWow, what a discography. That dude has had a CAREER!

On Breezin' I was surprised because Don Sebesky did all his earlier stuff (very well I might add).

A bunch of friends and myself are heading to the Iridium jazz club
in NY to see Les on 10/29 . We will be a group of eight and are stoked.
I will have turned 50 a few days before and will have experienced a=20
great B Day party the day before. We are taking a limo from Boston
to see the innovator himself. Les' history is unbelievable as is his =
playing.
<http://iridiumjazzclub.com/talent.php?talent=3D1&month=3 D09&year=3D2007>

If any are thinking of seeing him, this is as good a night as any.
He is 92 as I understand. Still going strong too. He's been playing his =

Les Paul Recording guitar.

We will arrive around 6:00 for the 8:00 show. The party is in my name
and I have an area for 9 reserved already. If anyone wants to join in =
you are=20
more than welcome. You should get the tickets online and have them held =
at=20
the door. Give me a heads up and we can all hang together. I'll let =
the Iridium=20
know the body count at the very end. =20

The Iridium has a nice but expensive menu. We plan to eat there but you wouldn't have to. There is a \$15 minimum per person. Tickets are \$45 = plus a \$5 charge. Welcome to New York.

>My studio in Stamford CT was under five feet of water. Does my paris hardware
stand a chance ? I have a mec with two 8in, one 8 out, a c16, and two eds
cards.

Thanks,

Steve L.It probably does. Computer gear (save hard drives) can usually go through
a washer and come out OK. The most important thing to do is let everything
dry COMPLETELY before turning it on. Take all of the external metal you can
off of the MEC so the boards can dry out. Pull the MEC cards (carefully)
so the contacts can dry out. Then lay everything out and point a fan at it
and let it blow for a day or two, turning everything over to be sure it's
dry. (I've used a blow dryer before but that can heat things up too much
if you're not careful). After that I'd try turning on the MEC only and seeing
if anything works. Then add one card at a time. You might get lucky, or you
might not. But if you start firing the stuff up when it's wet you're cooked.

>Steve L.I've come up against a problem that I havn't had until know. When I mix using
bounce to disk I get a crackling on the bounced file. It doesn't crackle
during the bounce, but when I play back the bounced file, it crackles on
the left channel.
So far I've tried removing all plugs on the master buss, and I've tried bouncing
individual sub groups. Crackling is present in all instances.

I will be trying to figure this out today, but if anyone has had this before, I would welcome the advice.

I'm not pushing the levels so it's not "over" induced and I run my master fader at -0.03

Crackling is present even when bouncing a sub mix with one track on it. No overload light on submix.

RodHi Rod.. Try bouncing onto another drive on you system to take the load off of your recording drive.

I wish my music theory teacher friend was still alive. I would walk down the street and ask him "how do you do that?" just like I used to.

I used to bring over stuff like Sting's Fortress Around Your Heart and he would show me the modes used.

Anyway, glad you liked Arvo.

TCBThat's not a reason to stay away from South Africa? That happens everyday here in the good old USA.And if you're in XP, disable all the services discussed on my tweaks page.

www.kfocus.com/paris

my cubase one is probably more thorough too

www.kfocus.com/cubaseAs of a few years ago SA had a per capita murder rate five times greater than BRAZIL.

http://en.wikipedia.org/wiki/Crime_in_South_Africa

Violent crime is a pandemic there. And Lucky Dube was a hell of a musician.

Rick,
1 mec, no BNC involved. Paris boots up so the 1 mec that
I'm using shows up but never any A to Ds or any installed modules.
This is the same symptom before I repaired one of my mecs with a
new chip. The clock light continues to flash too. Never locks in.

I am using the simplest setup I can imagine and still it's not working.
Mike A. suggested the .ini file to make sure card A is 0. I'll try =
that.
Pretty sure it's right but who knows?
Thanks,
Tom

>Yeah...all sorts of plugs. No auto tune though. It's not related anything
too hot...happens sometimes in quite parts also
It looks like it may be related to the UAD 4.7 plugs, the one with the Neve
88rs. I re-ghosted my system back to a version with UAD 4.6, did a bounce
(of course I was missing the 88rs plugs) and it was clean. At the time I
thought it was just because I had a fresh install of the OS, Paris, etc.
I then re-installed the UAD 4.7 to get back the Neve 88rs plug and I started
getting the same problem. I'm going to set up a quick mix on a fresh ppj
to rule out a corrupted ppj, but that's where I'm at right now.

>>I thought of that, but haven't tried it yet. 2 reasons. 1.right now, I'm using
the spdif on the A card to connect to the DAC-1, which connects to my monitors.
I'd have to change that all around, and right now, I'm hoping not to have
to go through that, as it's next to impossible to get to the back of my Mecs.
2. It seems like, while that may prove to be an acceptable work around, I'd
like to get to the bottom of what's going on that causes the problem in the
first place.
I'll probably end up trying it, if I can't get it sorted out.
check my response to EK's post for what I've found out so far.
Thanks
Rod

How can I get the comp to work in xp?

Thanks,
MikeHi Mike,

Is it just my PARIS compressor that you can't get working? You could try adding the plugins directory to the windows path. Let me know if you need help with this.

All the best,

Mike

>Hi Mike,

I'd double check that there isn't a typo in the path. You never know. send me an email at mike AT mikeaudet dot com and I'll copy and paste the ini file into a new document using visual studio and send it to see if that helps. If that doesn;t do it, I'll make up a debug version, and you can email me the log it creates.

Talk to you soon,

Mike

>Hey, I used to teach music theory and composition. We'll have to chat if
we're ever walking down a street. :)

Anyway, I was going to ask if you'd ever heard Frank Zappa's "The Yellow
Shark." I thought of this when you said " . . . modern and yet so beautiful
.. . ." because this qualifies, too. Not that it's similar compositionally,
but Frank was definitely capable of some wonderful orchestral stuff, and
"The Yellow Shark" is a whole album of it, arranged for and performed by
Germany's Ensemble Modern. The pieces range from serene to humorous to
violently dissonant. One of my favorite records ever.

Cool! Soooo how can you use the harmonies in Part, and say Barber's Concerto for Violin and Orchestra on lead guitar with a sort of Who thing going on in the rhythm section?

How do you blow bebop over a hard blues groove??

Strange sound we get in our heads huh? I think it would take 100 years to do the things I dream of...

Haven't heard this. I would love to.

I used to bring melodies I had come up with to my friend the comp and theory prof and he would hear them once, and go to the piano and play one and harmonize it on the spot. And beautifully.

Used to give me the worst damn headaches and fits of swearing...

<grin>

DCyou can sleep through a tornado and all the sirens a 1/2 mile away...sheesh.Hi All

If any of you have been thinking of using Reaper as a second sync'd DAW please go to this post and add your name to the list of people who would like to see this feature implimented in Reaper.

You will have to register to post.

<http://www.cockos.com/forum/showthread.php?t=10984>Last night there was a tornado of a party across the street. Houseful of 20 something dudes in full on party mode. Apparently from what I could gather from the 100 decibel conversation level, the jack was flowing , the weed was killer and no one had mastered smoke on the water on an out of tune guitar as of 4am. Best line of the evening, said in a dead on spicolli voice "Dude, welcome to our humble abode".

rick <parnell68@hotmail.com> wrote:

>you can sleep through a tornado and all the sirens a 1/2 mile

>away...sheesh.Here's a little blurb on Les and some early shows being reclaimed for DVD. I't s an Apple promo, but it's interesting anyway.

<http://www.apple.com/pro/profiles/lespaul/>Hi All,

This is a bit of a mini release. I found the equation for a crossover in one of the PARIS source files, and I needed one for the next plugin I'm planning. So, i built this more as a test, but it still might come in handy for someone.

It's a 3 band crossover, in stereo and mono versions. It uses almost no resources, and sounds really good. It is a different algorithm than the standard PARIS Eq or the FreakQ, so at the very least, it is something new.

www.ensoniq.ca

Hope it's useful to someone out there.

All the best,

MikeHi Tom !@

Sorry to hear you still having problems like this ~!!

Must be very frustrating.

Open the Paris ini file and there change the mastercardoutput with your other cards and see what happens !!

Let me know.

Regards,

Dimitrios

It does export and open as a OMF file back into paris
but it will not open in Digital Performer 4.5
Does anyone have a anwser
Thanks
CliffordWell, while i type this post, I'm in our new apple store (5 minutes from the

house!!)..

I'm running Logic 8 (Studio) on a new imac Intel core2 duo 2.4 (24 inch monitor), playing with (Re-mixing/editing) a "ROOTS" MIX CALLED MARATHON MAN... A Hot Hip hop mix that comes with Logic Studio..

Ok..First, I'm impressed with the Speed and solid feel of these new iMacs..These are not your fathers imacs.. Completly different guts.. FAster buss, Separate Nvidia Graphics card.. Sata 3.0 drive..800 mgz firewire..

Logic Studio is (99 percent) of what I wanted to see changed(I wanted more real world looking faders)..

That being stated, the program (@1.0) is a dream for me.. I'm an old Logic head and got dismayed with apps lagging audio editing and recording functionality..

Apple has answered the bell.. At first , i didnot think i'd like the one screen thing..But, I'm a fan.. You can still run muti monitors in Logic 8, but the one screen thing is very cool..

The editing is very fast..quicker than Pro Tools..2 clicks away from Nuendo/Cubase.. Somehow, apple has managed to keep intact it's (Still) Best Midi Sequencer in the world feel, and tightness that only an Akai MPC can come close 2..

Sound: I have to agree with most logic 8 reviews..The Sound has improved. More, dare I say Pro Tool(ish)...SBut, still a tight bottom...

The fact that when I plumped down to test this rig, it was already running a dvd(School Of Rock) and several safarie web pages.. Its still playing while I'm typing this post..

Back to Logic 8..They also, keep the tight integration with Digi in that you can use your TDM hardware and use logic as a front end..Sweet..

To be honest, I could start a project (Midi-wise) and go to tracking audio/edit...Then, mix in this app.. Things can only get better, as I have stated , this is only version 1.0..OH.. NO CRASHES...!!! Torturing this baby for 2 hours straight..

Another cool part of the bundle is : Main-stage: I realy can't explain this app, but it's a kind of a shell (Say V-Stack) for live playing of virtual instruments with having logic running..

I'm told by the in-store Logic/Final Cut pro rep, that Logic will get a 30 percent boost in performance in Lepoard oxs..Sweet..

Lastly, These new machines already had boot camp loaded with XP Pro Sp2.

To me, for audio pros, Getting a Mac is a good purchase. No matter how you cut it.

Impressed!!!LaMont,

Does Logic have:

Automatic delay compensation

The ability to integrate VSTi like Native instruments, Synthogy Ivory and if I were to get a dual socket quad Mac, can logic utilize 16 GB of RAM if it's available?

Does it support UAD-1 cards?

I'm assuming that it has the ability to patch in external hardware processors?

What control surfaces does it support?

The OS is 64 bit, right?

I'm just wondering what kind of \$\$ it would take to get a superDAW these days.....

\$6k for the monsterMAC (maybe more)

RME MADI PCIe (after selling my Madi PCI-probably another \$300.00

RME AES-32 PCIe)after selling my AES 32PCI-probably another \$150.00

A PCIe>PCI GE Fanuc chassis for my UAD-1 cards \$2000.00

Another control surface to replace my Steiny Houston-\$1000.00

\$10,000-\$12,000 most likely

Hmmm.....not being critical or doing my typical "Mac slam" here. those days are over for me now that MS has managed to deliver something even worse (wait.....was that another Mac slam??? :o)

I know it's going to cost me \$\$ eventually to move into the world of "no PCI slots". That's the direction everything is going. What's troubling to me is the slacker/non professional crap that I'm seeing from Steinberg development. You'd think that their being owned by Yamaha would have produced something integrated to the level of t Digidesign by now with controllers. Also, the inability to address dual socket multi core CPU's is inexcusable in this day and age. I hear that C4.1 and N4 do not yet have this X-Scaling issue solved by a long stretch and they're going to be pretty much supporting only Vista on the windows platform pretty soon. Moving to Vista is sounding to me like a bigger nightmare than moving to Apple. Kudos to Apple if they have the 64 bit.....large memory and x-scaling CPU issues sussed.. If Logic 8 can utilize the resources of dual quad core CPU's, it's going to probably get quite a few converts.

D (I can't believe I'm saying something nice about Apple) J

 >hey DJ,

-Yes, Delay Compensation thruout.

-16 core ready with the upcoming Lepoard

-Uad cards-Yes (via PCIe slots)

-External ffx patching..Yes. With Delay Comp

-Mackie Control Surface ready,Euphonix (Big Time), Tascam 32/4800, yamaha
02r, 01x, dm2000

-Lepoard 64 bit, but can run 32 bit apps..

This imac cost \$2499.00 list from apple. Nice box.

I have a new Mac intel Tower 8 core. I have waited to load since I new that something was comming down the pipeline.

I got a great deal on it..Say 2k..The, I loaded up the (3) remaining drive trays (500 gig each bay)..

Since Apogee lowered the price of the symphony cards (795 list) I've been leaning that way, but the Lynx LX 16/w rme hammerfall pcie card vs the Apogee Sympny Ad16x.

Plus, with Lepoard's boot camp can run MS vista if you like. My point, with these new macs, you can have the bes of both worlds..

As for Steinberg, i won;t count them out. But, many of us are getting a little cranky. The synergy with Yamaha has not produced the kind of products we were hoping for. Ek has pointed out some of Yammmmy's statagic future moves, but to me they look a little like M-Lan(ish) ..Good on paper, but lacks substance.

can't count out Digi. Say what you want about Digi, but like Paris, they offer a complete profesional studio solution with great mixer controllers, especially the new C24. With the upcoming argosy console dropping for the new controller, and HD2 acel..Yes, PT7.4 with it's very cool elastic audio feature.

So, we have choices..I hear that euphonix is workign on a chepaer version of their MC5 controller.

that's us. some poor couple who moved in that day to their new house
died that night when their house was put into their pond by the storm.
it's a stroke of luck that more were not hurt as the bulk of the 150
yr old trees fell between buildings, though there are a lot of newly
made ranch homes in the area.

Not yet!

The external patch point is fine - just like in Paris, but no Delay Comp
on external effects yet. Still...

anyway.

N4 is out and it's pretty sweet - it's faster and snappier - some plugin
compatibility issues to sort out (W5 no longer works for one), but otherwise
running well here.

DJ -

The multicore issue is top on the list to be solved probably in the next rev, along with support for dual mono files on stereo tracks (drag and drop). They didn't have time to completely fix the multicore problem with N4.1 so it was put back - I'm hoping we'll see it in a maintenance release fairly soon.

Go with whatever works for you though. I won't post Nuendo 4.1 features since this is a Logic thread. ;-) (If you or anyone else is interested I'll post something next week.)

Btw - I hear you on Vista - hate it. If Apple released OSX a couple of months ago, they could have made a big stake in the OS market. Now I'm thinking Linux could finally make push into the pro music/audio/video market.... just a hunch (or hope maybe) based on something I noticed in some Cubase 4 xml code....

Yep - check the teaser here (it really is just a teaser that takes a while to let you know they aren't showing anything yet):

Dedric

Well, maybe someone finally got a clue that there needs to be a professional controller with more than 8 x faders for around 5k or less that has what the Tascam US 24 was lacking.

Users have been shouting about it long enough for sure. I added my ditto to that request long ago. It's really a big missing market. Euphonix may be the first smart one to pick up on it - kudos to them too if they have, considering their typical market is usually over \$100k.

An MC is still on my wishlist, but not until I see what comes of this unit.

>.....and decide to go down the native path using higher sample rates in the
same way I have de3cided to do, I've got the new DAW(s) in a pretty
bulletproof configuration now with the ability to interface lots of external
boxes (which I would prefer to do, even at lower sample rates).

I had recently purchased a Lucid GenX-96 hoping to use it as a master clock
but I get the Lucid GenX-96 in here and try to slave the MADi card to it and
the MADi card won't slave to it at sample rates above 48KHz. Not the end of
the world, but downright baffling.

What "is" working (and what I'm going to stick with) is to output the MADi
WC to a Mytek Stereo96 AD converter, then take the BNC output of the Mytek
and input this to the Lucid GenX 96 while simultaneously taking the AES
output of the Mytek and patching it into the AES input of my other Lucid
GenX-6 box. Set both Lucid boxes to distro mode with the respective proper
incoming sync formats from the Mytek and use the BNC outs (a total of 12
available) of the Lucid boxes to the following devices which are either
internally terminated or terminated with 75 ohm BNC caps:

RME AES-32
RME ADI 648
RME ADI 4-DD
RME ADi 4-DD
RME ADI 8-DD
RME ADI 8-DD
RME ADI 8-DS
RME ADI 8-DS
RME Multiface

This leaves me three more clock outs for further adventures.....;o)

I'm quite happy with using the MADI as WC master, it just seems strange that it will not lock to external sync above 48KHz. Stuff like this just drives me nuts. At any rate, everything is looking good here now and I'm able to do what I had wanted.

The way to get the external FX boxes (a PCM-91, SonyV-77, Roland R-880 and Quantec Yardstick which are not capable of operating at sample rates above 48KHz) all working smoothly at sample rates up to 96KHz using 2 RME ADI 8-DD format/sample rate converters is as follows:

AES 32 Totalmix 1:1 routing

Project sample rate set to 88.2KHz

AES-32 control panel Output Format - Double Speed>Single Wire

Routing:

AES 32 outputs 1 & 2, 3 & 4, 5 & 6, 7 & 8 to #1 ADI 8-DD inputs 1 & 2, 3 & 4, 5 & 6, 7 & 8

#1 ADI 8-DD settings left side:

Source-AES

SRC-Active

Clock-EXT

#1 ADI 8-DD settings right side

Source AES

AES State-Pro

#1 ADI 8-DD AES outputs to PCM 91 AES in, V77 AES in, R-880 AES in, Yardstick AES in

PCM 91 AES out, V77 AES out, R-880 AES out, Yardstick AES out to #2 ADI 8-DD inputs

#2 ADI 8-DD settings left side:

Source-AES

SRC-Active

Clock-EXT > DS (very important-without this DS setting, the output signal to the AES-32 is mono)

#2 ADI 8-DD settings right side

Source-AES

State-Pro

#1 ADI 8-DD AES outputs to AES-32 inputs 1 & 2, 3 & 4, 5 & 6, 7 & 8

Additionally, I've got 4 more external processors here (a POD XP Pro (96KHz capable), a second Sony V77, a TC Electronics D-2 and a TC Electronics M2000) patched into the AES 32 I/O #'s 9 thru 16 with the Sony and the two

TC devices interfacing with 6 x Behringer Ultramatch Pro units in a similar manner to what I am using with the ADI 8-Dd units and these are handling the real time sample rate conversion to/from 88.2KHZ for these boxes. I have to say that as many bad experiences as I have had with Behringer products, these particular boxes are and have been rock solid performers.....I do keep a spare..just in case.....;o)

It's nice having 8 x outboard external devices in Cubase SX capable of processing at 88.2 KHz. It really does open up some possibilities and save some DSP horsepower that can be used for those nice UAD-1 compressors and EQ's when working at higher sample rates.

Now.....to start getting some projects going at said higher sample rates. I've got two in preproduction right now. It's almost time to burn up some disc space.

;O)

DeejHey Dedric, I think OSX Leopard is a pretty good version of Unix imho. Even, with Panther, with the right hardware, this seems to be the best for Pro Audio apps. Then, when when you factor in the fact that this same Box (Mac) can run Win Xp-pro and run it really well. As I have witnessed Cuabse SX running on the Windows partion. It was flying!! ;)

I'm not giving up on Windows, but it seems that Apple is really making a really good case for the go-to Multi-media workstaion.

Hey, the rumor for the apple x-server is that it use the upcomming AMD quad core. Ohh weeee!!! With OSX-Leopard. that will pack a good punch.

>Hey Lamont - for sure OSX is the most commercially viable Unix based solution.

My biggest concerns about that route at the moment are the lack of hardware options in a broader price range (e.g. can't buy a single-quad core, which would be great for a farm system); solid proof that core audio can run at comparable low latencies under comparable loading as ASIO can currently - from what I hear, it really doesn't quite match up to ASIO's performance level at the moment (that can be a big deal); and that core audio doesn't yet support direct monitoring (Leopard?) - not a big deal with faster systems, or really even for my work in general, but a minor consideration at least.

As far as running WinXP Pro dual boot - nice to have for some, but not really necessary for me - no need to spend more for hardware to have what I already have. My only reason for considering a Mac would be to avoid Vista and run OSX as a way to move to 64-bit and higher memory access.

I am with DJ (and you it seems) on this point though - Vista just doesn't look like an audio solution... heck... it's not much of any solution. ;-)

I'm about to downgrade my laptop to WinXP from Vista, which is actually a bit of an upgrade since I can't get the stupid thing to see any USB thumb drives, my Logitech cam, and overall it seems a little slow for a core 2. WinXP and OSX have no problem with any of these devices.

Regards,
Dedric

I'm happpy if you're happy with it. Rock on. Or get a DM 2000..

>Hey Dedric, I concur on your points. I have a question to you and many others.

Why is so important to have zero latency or a native based rig? When, just adding a mixer for monitoring will take care of it. Now, you have zero latency/ with fx (via verb fx) when tracking.

yes, Asio is nice, but it seems that folks are hell bent on cracking .003 ms latency at 88.2/96k sampling rates or even 192.

Even with the fastest computers, they all struggle to get to utopia zero latency.. Jsut add any mixer and the problem is solved..

BTW: Those Apogee symphony test are real world numbers. You gotta admit, thosse ms nuembers are impressive..

And, although kind of expensive, those current macs can be used as dsp devices..aka like farm dsp cards..
