All you could do is bounce the track with all the effects you want.

ick to getting Native, EQ and EDS to render? Can you do it

As I recall, the last time you bailed out on XP you were attempting to set it up on an older setup.

Regards,

El Miguel

I'm thinking that since no one uses mixers anymore during tracking and
riding the fader really doesn't apply as far as boosting/attenuating
signal levels in DAW control surfaces like the C-16, the appropriate
terminology for this situation while tracking would be *riding the
pot*....and somehow that just doesn't seem a good thing to discuss in polite
company so it's easier to just use a compressor.

;o)

>> Thanks Pete.I'm using Nuendo 3 with a M-Audio Delta 1010 card and breakout for the hardware.

No mic pres to speak of as I use my alesis Studio 32 pres for any recording

I need, mainly V/O.

I don't do much music any more, mainly Doco's and Corporates/Commercials.

In 1984 I quit studios altogether and started doing location audio for TV /

Films / Docos etc.

The first 10 years were almost totally spent doing Beyond 2000 / Beyond

Tomorrow as part of a 3 man (person), crew travelling around the world.

I reformed my Studio back in 1999 with Paris, and used that successfully

syncing to video, (SP/Digi Betacam), until I needed to be able

to sync to

AVI's and Mpegs....Paris couldn't do it so I got Nuendo and found it did all

that stuff that I required way better than Paris, although I really liked

the sound of Paris and the fact that it was a CPU independent system.

I'm just starting to venture into Surround...what a minefield, but fun.

What if I tell it and it refuses? Is there some way I can force it to do
this whether it likes it or not? If so, how?

> Similar to riding faders, I change preamp input gain levels during tracking, but not in real time.

First, I ask the artist to lay down a dummy vocal so we can see vs./ch. or whatever.
Then we cut whispery stuff with a high gain and shouting vocals with a lower gain.
Result - far less need for compression of any kind.

I work with some classically trained vocalists who can sing in any part of their range without gain problems.
Then there are folks who need some help: the knob, the comp, or alcohol!

Best,
Lance - Budding old fart.

clicked on the SX computer so though I could transfer from the SX DAW to the
Paris DAW (backasswards from what I need to be doing), I couldn't transfer
from the Paris DAW to the Cubase DAW. Pilot erroras usual.

Seems like I need to build a DAW a week just to keep my syanpses firing
properly. When I go for a couple of years, I forget one of the
3274433333333337892 simple little things that are necessary to make this
happen.

I did talk to Chris Ludwig earlier today. It ws gratifying to know that
99.9% of the wierdness I've experienced while building this DAW has also
been encountered by others.

OK.....now where was I????

;o)

ng about when you select
a whole tracks fader automation and want to put it up say .2 db sometimes
it will only go up .5 or so. The shift drag thinkg does not seem to work
for me at least.

Cujo,
Same here. Usually works but not always.

3.1

Tom

>>>>>>

>>>>>>Ed and Edna,

You're doing this with "Normalize mix"(Ctrl+N). If it's 0, the highest channel volume will be 0db. If you're setting it to +4, the highest channel will be +4db. All the other channels will automatically be following with +4db. If you need 2 more db's up, it's +6. It can be a little tricky if you have some volumes automated. Sometimes it will not follow the "normalizing" process, so you have to go into automatin mode(Shft+E), mark the automations red and normalize it with the same +4db's in "Change volume"(Ctrl+E). If you're learning the automation tricks, it's like a new world will be opened up for you. It's a good idea to find out more about it from the manual.

>Those Cd's from Lynn Fuston.

Since I work on nearly all DAW platforms, I can tell a Sonar mix. because

it has that very nice generic (non coloring) sound.

Logic-can't tell, DP, Can't tell, SX-I can Spot, PT-Yes, Paris (well Of Course) and so can my producer friends. They can spot the a PAris mix right away.

A CD produced in Paris...I'd say you've contributed something
useful...congrats!

I you have any digital gear interfacing with the Paris spdif I/O and = the RME

spdif I/O and you have created a routing matrix between a DAW running = as an

external FX processor and a control for digital patchbay routing which = is

controlling the I/O routing between your Paris DAW and your Cubase SX = DAW as follows:

Paris Submix 1

Cubase CH 1>RME 1 ADAT 1-1 out > Paris CH 1
Cubase CH 2>RME 1 ADAT 1-2 out > Paris CH 2
Cubase CH 3>RME 1 ADAT 1-3 out > Paris CH 3
Cubase CH 4>RME 1 ADAT 1-4 out > Paris CH 4
Cubase CH 5>RME 1 ADAT 1-5 out > Paris CH 5
Cubase CH 6>RME 1 ADAT 1-6 out > Paris CH 6
Cubase CH 7>RME 1 ADAT 1-7 out > Paris CH 7
Cubase CH 8>RME 1 ADAT 1-8 out > Paris CH 8
Cubase CH 9>RME 1 ADAT 2-9 out > Paris CH 9
Cubase CH 10>RME 1 ADAT 2-10 out > Paris CH 10
Cubase CH 11>RME 1 ADAT 2-11 out > Paris CH 11
Cubase CH 12>RME 1 ADAT 2-12 out > Paris CH 12
Cubase CH 13>RME 1 ADAT 2-13 out > Paris CH 13
Cubase CH 14>RME 1 ADAT 2-14 out > Paris CH 14
Cubase ST CH 15L/ Stereo Group 1 L> RME 1 ADAT 2-15 out > Paris CH 15
Cubase ST CH 15R/ Stereo Group 1 R> RME 1 ADAT 2-16 out > Paris CH 16

Paris Submix #2

Cubase CH 16>RME 1 ADAT 3-17 out > Paris CH 1
Cubase CH 17>RME 1 ADAT
