OK, here's what I've got left:

* Groove Tubes GT66 LDC Tube mic \$350.

* B.L.U.E. Blueberry w/wood box & B.L.U.E. shockmount/windscreen \$700.

Both in minty-fresh condition.. pics here:
<http://www.saqqararecords.com/html/4sale.htm>

Stuff that's not really something you'd need to see a pic of:

* Creamware/Scope Pulsar Project Card & SyncPlate \$750.
This is like basically getting a brand-new Project card (used less than a handful of tims) for \$50 off street price, and getting a sync plate thrown in for free. The Project Card has 6 SHARC DSP chips, and this version is one with the "puls" i/o options - balanced analog i/o's, 2 lightpipe in's, 2 lightpipe outs, and MIDI in/out/thru. For those of you who haven't seen these, it's pretty close to the size of an EDS card. You can get more details here:
<http://www.infinitevortex.com/creamware/scope-cards/project/>

* MOTU Symphonic Instrument. VSTi, sounds nice & clean, well-recorded samples it seems - it's just not my cup o' tea. Has a built-in convo reverb! License is via iLok (included). \$200.
Info link & demo clips here:
<http://www.motu.com/products/software/msi>

Paris gear-wise, I would consider a trade or partial trade for an 8-in module and/or an ADAT card.

Other-gear-wise, I could use a superclean/superfast preamp like

a Massenburg, or something of that ilk. Could use something interesting in the way of compressors.

Depending on wh
