doesn't do it, Cubase SE doesn't do it. I'm guessing your observation means Logic and PT won't either. Sonar? I'll have to check Reaper. Fact is, this sort of feature makes it easy to

, I'm really,
really close to getting it out.

I was thinking we could all work together getting some presets going for it. It's really cool. It allows you to change the internal resonances of the reverb so it can be made to sound like a plate or a room or a concert hall, etc. This way, we don't have to rely on Matt's code, too. I feel a little uncomfortable releasing someone's software without their permission. And, I don't have a copy of it anyway.

I'm hoping by the end of this next week I'll have it out.

Thanks again!

Mike
