d off big chunks of THREE fingers on his left hand. Index/middle at about the first knuckle and ring just above that knuckle. Of course he assumed he couldn't ever play for real again but it took him a couple of months at most after he had healed and he was playing essentially indistinguishably from before the accident. I was amazed, but not nearly as relieved as he was.

3. Django Reinhardt.

Good luck, and glad it's nothing worse than it is,

TCB

one and always planned to get one... I am not sure how they work concerning mixing... If I have a song with 16 complete tracks recorded. And I have one 8 out card... can I somehow send those 16 tracks out the one 8 out card?

Or another words, can I place more than one output track to one channel on the 8 out? I hope I'm not confusing things... OR, if I have 16 tracks of a song, must I get two 8 out cards in order to get all 16 tracks out through the cards?

tia... ~ Ed You can assign aux sends to the 8 out card. With two cards you could get 16 discrete outputs using all 8 aux sends. With only one card, you would have to do some pre-mixing. The 8 out card can also be assigned to the monitor/mix outs to take advantage of the 24 bit convertors.

David.

David,
The supply I pulled from the Magma did not look stock. it
looked like a cheap 400 watt mongral.

I just bought an Antec 550. It is modular in that you only attach
the cables that are needed. It seems to me that that supply will
be able to run with or without anything attached to it.

Does my thinking stand to reason?
Powerlessly,
Tom

I often use the "Render Selection to disk" function to set a single track containing multiple object as a single one.

I currently have a project with 5 tracks, all tracks contain multiple

objects and all track have their own audio level.

Is there a Paris Command that Flattens all the The tracks to a single WAV file while keeping the Audio level ratio between the 5 tracks...

Hope you can help!

NJNot that I'm aware of other than doing a mixdown

or

placing all your tracks on to one track (yet it;s a nightmare) and render that track

Then again I might be wrong

Most Excellent Fix It Guys,

New problem. Just installed a new Antec 550 watt supply.

Powers up nicely in the Magma. It will run with 5 EDS cards

then shut off just before XP boots and screws the whole shootin' match.

I'll double check seating of the cards but what else would have made = even

the new supply to croak? Fans are cooling well too.

I'm thinking I have a broken EDS then ? Maybe 3 . . . ? The Magma?
Damn. Are there Magma drivers? If so I'd need older ones. The Magma
tech was almost laughing at how old mine is. It has a slot on the far =
left
for the Magma card. The newer one's slot #s go 1-13 rt to left as you =
face the front.
I think mine's the opposite judging by my master card placement.

Everything is broken it seems.
Tom

Will do.

And BTW - I had a talk with Kevin - apparently the SS gig turned into
a one-off for the album sessions, and then he was let go....

Sadly, not all the musicians I like seem to be decent guys in real
life.

But then, you already know that...

:-)

And I've decided I hate Eric Martin. Little fucker looks like a
20-year old kid. Still sings as well as he ever did. In fact, when I
first saw him in the dressing room, and he said, "Hi, I'm Eric", I
thought, "Eric who? He can't be old enough to be Eric Martin..."

Looked him up. He was born in 1960. Bastard is two years older than

me.

I'd really hate him if he hadn't been such a nice guy to me.

;-P

I like the autographs (mostly on album covers) because somehow I think it's cool. I've got a copy of "News of the World" signed by Brian May. I've got an album signed by Harry Chapin. And my "Bat Out of Hell" picture disc is signed by Meat, Kasim Sulton, Rundgren, and Steinman. I just get pleasure out of looking at the walls in the "Rock Hall" in our house. And aside from the Chapin and the copy of "The Who By Numbers" signed by all 4 original guys, they're all signatures I've gotten in person from guys I've met and talked to. I allow myself some slack on the Chapin, since my wife saw him a bunch of times and has a book of his poetry that he signed to her.

I guess I figured I was lucky to be there - I was just going to take photos that Andrew (promoter) could use later on his website, and I really had no place in them.

ow it won't
start up and keep running. This began tonight as
I tried adding Mec #2 to a 1 Mec setup. The Magma
would power on for a split second then stop. I'm thinking
power supply. It might still work with all 5 cards and 1 Mec
if I baby it.

Once it's off I have to unplug, wait, replug and start again.
Maybe it will start up with one Mec then. I thought there was=20
a auto shut off mechanism built in to the Magma. I didn't see =
anything
about that in the manual.

???

I can't believe this one but . . .

I've had 5 cards in a 13 slot Magma for years. Now it won't start up and keep running. This began tonight as I tried adding Mec #2 to a 1 Mec setup. The Magma would power on for a split second then stop. I'm thinking power supply. It might still work with all 5 cards and 1 Mec

if I baby it.

Once it's off I have to unplug, wait, replug and start again.

Maybe it will start up with one Mec then. I thought there was a auto shut off mechanism built in to the Magma. I didn't see anything

QUOTE></BODY></HTML>

-----=_NextPart_000_009F_01C80C42.4281B230--Last Sunday, I attended the melodicrock.com
10th anniversary concert
in South Bend, Indiana.

Artists performing included Kevin Chalfant, Jeff Scott Soto, and Scrap
Metal, an all-star band composed of Matthew and Gunnar Nelson, Kelly
Keagy from Night Ranger, Eric Martin from Mr. Big, and Mark Slaughter
from Slaughter.

Special guests during the Scrap Metal gig included Jim Peterik and
Jimi Jamison, Jack Blades, and Joe Lynn Turner.

Now, keep in mind that back in the 80's and early '90's, these guys
were the bands I was listening to. I would have given anything to
just shake their hands. If you had told me that now I'd be hanging
around with them, or if any of them would have given me their home
phone numbers.... I'd have said you were effin' nuts.

I actually went with Peterik, so, as his personal roadie I got to say,
"I'm with him" and actually mean it.... ;-P

Plus, I got to hang backstage and in the dressing room.

I got to listen to those guys working out the harmonies on songs that
I listened to all the time - in fact, still do. Gave me chills to
hear Turner working out the harmonies to Rainbow songs....

And this was really the first time, aside from a World Stage show in
Belgium, that Peterik and Jamison have performed on stage together
since Jim left Survivor in 1990. The crowd went insane.

I also shot roughly 542 photos between the dressing/rehearsal room and
during the show.

After I offloaded my camera and browsed through all of the images, I suddenly realized something. There are zero photos of me with the stars.

I guess my relationship with Jim has conditioned me to the point where I'm still fan enough to ask for autographs (you should see the walls of my hallway - LP frames from Michael's are my friend -- but apparently now asking to pose for photos with them is something I feel uncomfortable doing. I guess I want to be accepted as a normal guy -- I definitely don't want to abuse my friendship with Jim and risk being embarrassing. I kinda enjoy having the chance to just stand around and talk to these guys like real people, and I like to think they appreciate that as well.

So, if any of you ask for proof that I was actually there, and not just making this up, you'll just have to take my word for it.

pabSounds like fun. Tell Jim I said Hi when you see him again.

>Hi Tom,

I have the same old Magma, and it doesn't require any drivers.

I'd try booting Windows XP with no EDS cards in, then one, then two, etc., until you can find the problem. If it is the bridge chips in the Magma, I believe Windows would fail even if no cards were in it. You may want to test it with another PCI card in it just in case I'm wrong about that. It sounds to me like a bad card that is throwing the PARIS driver for a shit when it tries to initialize any 442s that are attached (that happens on start up).

Good luck!

Mike

>Hi David,

I am not quite following what you wrote or suggest. But looking at your response, I guess the answer to my question is... no, you can't send multiple tracks to one channel on the 8-out.

I never used the aux sends and returns for anything... so that is new territory for me. I like to keep things simple and not confuse my setup. I honestly believe if I start routing things thru the aux's, I would lose track of what is what. So I just do the normal recording. Or maybe I'll find a really great deal on two 8-out cards someday...

EK Sound <ask_me@nospam.net> wrote:

For some reason, I get cold chill down my back when I watch this. Part of it is positive excitement because I really like the message, but part of it is alarm because something about this guy reminds me of Jimmy Carter.....the honesty part, I think. this was absolutely disastrous in the foreign policy realm. Many of our current woes reach back to his blundering. In order to deal with a world full of snakes, can we depend on someone who doesn't speak "snake"?.....oh wait!!!!.....he's been a sitting congressman for a while.

Nevermind.He lost me the instant he put up the "don't tase me bro" a**hole as an example of the loss of personal freedoms.

poof, gone.

>16 discrete outs means 1 to 1. Sending 16 individual channels out of Paris
would

require the equal amount of 16 individual physical connectors. You would
only need

to do this if you wanted to work with those 16 channels individually outside
of Paris. like you were mixing on an analog console. Otherwise, the Aux way
of

doing things is really quite simple: On each channel strip turn on an Aux
send

(1 thru 8) and on the Aux output module (right side of the mixer) select
"External"

as the destination. Then you select how you want the channels sent ie, which
tracks can be grouped together, stereo pairs, drums, backgrouond vocals etc.
and send them out. The Aux module takes care of the returning of the signal.

The only confusing part is that the Aux module in the Patch bay is called "Effects".

Hi Mike,
I think Windows will boot fine, at least it used to with all 5 cards in it. Now it chokes as soon as I attach a scsi cable to any of my three new working mecs. It didn't a couple of days ago.

I'm digging deeper into the way the cards are seated now. I will check the Magma with one card and one interface at a=20 time. Maybe the scherzo drivers are screwy from removing=20 and reinserting the cards? =20

This is amazing how one little thing can ruin a good business. Well maybe it's 10 little things but. . =20

-----=_NextPart_000_0058_01C80CD3.67D64EB0--Fair enough, but Paul blew it in a couple places in that video.

The first one was the graphic showing in big scary headlines

"POLYGAMISTS IN ROMNEY FAMILY TREE!!!"

Now I don't care about Romney either, but who freakin' CARES about this?

How about your family tree? How about mine!

Holy cow, man! We'd all be in hell.

That sort of stuff, and presenting ass-hat tase-boy as a victim, say that Paul is manipulating me...

no thanks

I am beoming more and more convinced that high-visibility leadership and power positions attract the worst sort of sociopaths and lunatics. And today, I do not see how anyone else has a chance.

OK dude. will do.

;o)I think a bit part of his point is that a) we don't need to talk snake nearly as much as we do and b) a lot of the snakes are made larger/faster/smarter by our on blundering. Remember, a fair number of the guns used to shoot US soldiers in Afghanistan show up on CIA receipts.

He gave me no end of grief when he foound out that I had once been in a
band that played "We Had Joy, We Had Fun, We Had Seasons in the Sun..." 2
or 3 times a night. The things I used to have to do to make a living.

Maybe I should do a "jazz" version of that.

ire somebody to
.....errrr.....change his mind?

;oDHi Tom,

Hmmm...does it fail when windows starts if the MECs are connected or when PARIS starts?

The Magma power supply just stops after about 45 seconds
so windows freaks and won't finish starting up.
"Mike Audet" <mike@....> wrote in message news:470fbd61@linux...

Hi Tom,

Hmmm...does it fail when windows starts if the MECs are connected or =
when
PARIS starts?

David,

I think I've tried that with the same results but let me try again.

I'm just about to hit the studio.

Tom

Try hooking the MEC's up but NOT hooking them to A/C... as in "off"

David.
