</BLOCKQUOTE></BODY></HTML>

-----=_NextPart_000_003D_01C60408.A1C72430--I have learned that I can move much faster than Paris and my micro together.

So, I take it easy, having adopted a measured pace with my key clicks.

I don't use plugins.

I get crash on startup once/twice a week. Sometimes 3 times a night, but then no problem for a week.

Sometimes one of my submixes doesn't play on a four-card system. I have to restart the computer to get it going. One song so far.....any suggestions, anybody?

There was a flattened cat right in the middle of the and they striped over

it. Someone saw it happen and they called a radio station and from that

point on, *Splat, the cat* was a regular topic of conversation for months.

I was referring to the constant need to upgrade PT systems when I said that... sorry if wasn't clear.

The fact that full-out PT systems run only on Macs just kinda makes them go hand-in-hand in that regard.

NeilOh, OK. ProTools is another ball o' \$\$ for sure.

But you really can't blame Apple for that one.

Cheers,

-Jamie

hehe... for some reason the 80lb dog is often seen running full speed away
from the 15lb cat....

the studio shooting has definitely hit us hard... bad press... lots of
discussions about 'snitching' and life imitating art. Personally I believe
you live by the sword you die by the sword and you reap what you sow. Its
a crazy cycle between hip hop (pop culture as a whole) and violence that is
only getting worse. I definitely fear for the little ones. I was in toys
r us and the hip hop shit has trickled down to preschool... the remote
control cars are hummers with spinning rims and I even saw Bling Bling
Barbie. Argh.

Good new local video on topic:

I hate driving.

I prefer sky diving to driving. Fewer idioits.

Merry Xmas Everyone.

jefexcept if you really like the Paris eds eq, you can manually copy settings
to the vst version.It sounds the same, other than the freqs are a little
off in the eds version if your at 44.1. At 48k they're on. I've got a conversion
table around somewhere if your interested.

Rod

beginning
to think I've got a defective mobo. Too much wierd stuff happening.

I'm restoring a Ghosted clean install right now. I went back to my old
system drive and the Houston controller worked, but I couldn't get the Dual
CPU's to work on it and there were quite a few other problems as well.

Do you know anyone who services the Houston controller? It might be having some problems as well. I've seen similar phenomena when the USB connector on a device went south.

Thx!

NeilWell, like I said, the system works as is (MECs on A and B)
with the older 2.2 software, and has been running like that
for a couple of years - all inputs and outputs producing
sound without problems. So, I know my clock is good, the
cards are good, the MECs and interfaces are good. I just
brought up V2.2 to double check, and recorded using the
interfaces that don't work with 3.0, so it's definatley
a 3.0 issue.

When you had to have your MECs on A and C (or E), was that
with Version 2.2 and 3.0, or just with 3.0? I could try moving
the MEC to C and see if that fixes it, but I dread making any
changes at all to a functional (under 2.2) PARIS system.....

>Kim.I was a Mac clone dealer, it kind of sucked for me when it happened. The
fact is, it was hurting Apple because they had not grown their market. Apple
simply let competitors come in and take sales from them and they didn't make
enough on the licensing. They lost money on the deal. Apple had to do what
it needed to do to survive. There is talk again of Apple licensing, Michael
Dell has expressed interest. That actually surprises me because of all the
bad things he has said in the past about Steve Jobs and Apple, including
that Apple would be out of business in a couple of years. Guess he was wrong

about that one. He has tried to work out a deal to sell Dell versions of the iPod, Jobs said no. It's going to be interesting to see what happens with Apple products in the first quarter of 2006.

Well, if I already had 1 CAD M9 I might consider it, but I have
a TLM-103, and I basically need another LDC pair, which is why
I'm looking for another -103 (I'd also take another B.L.U.E.
Kiwi since I have one of those, but I don't know of anyone on
this group that has one... and also if anyone owns one, I doubt
they'd be inclined to sell it.)

NeilThat makes perfect sense, but you should still buy my mic

;-)

This is because the Power Computing and UMax models had higher bus speeds
and consistently kicked Appal'e ass in benchmark tests. They were better
computers, hands down. Mac was going to be my platform of choice until Jobs

pulled this stunt.

> >>>Lance, I'm really late getting in on this, but I think I experienced this
exact problem...seems eerily similar to what I encountered. I too am on Win98SE
and about a year or so ago, I was rebuilding my system. When I tried adding
a third HD to the system, I crashed. I received a bluescreen message I had
not seen prior to this crash or any other crash for that matter. Upon re-boot,
all of my HD's had been removed and I was not able to recover. I did a full
re-install only to encounter the same problem, at the same point.

In the end, I found that it was actually cable related. I saw earlier that
someone mentioned checking the cables, I would look at this rather closely
as some older cables work fine with devices of that era, but are not compatible

Hope this helps!

Tyrone.....so you need two mics of the same kind????.....hell man, just stick the TLM on one side and the CAD on the other and be done with it.

(heheheheh.....I actually did this with a U87 and a Studio Projects C1 once upon a time. Worked fairly OK, sorta', kinda'.....maybe ;o)

chorus.....errr.....and somehow I must have missed the bridge???? That song definitely needs a rewrite before we pitch it to anyone in Nashville.

Kenny Chesney ain't gonna' pick it up unless we figure out a way to get a steel guitar in there somewhere. Maybe this should just be a barebones vocal/guitar demo?

;o)

Not EXACTLY the effect I'm looking for. lol

I have one LDC pair (Baby Bottles), but ideally I'd like another for some variety.

I know you REALLY hate the SP-modded -87 you have... if you had two I'd be happy to pick those up from you

:)

Neillf'n I was going to buy a pair of LDC's right now, I'd be looking really hard at a pair of SE Titans. These multipattern mics are really nice. After using SE3's, an SE Gemini and a Titan on projects here, I really want to try their multipattern tube mic.....the 5600 I think it's called. I know SE doesn't have the *name* thing going, but the mics are friggin awesome. I remember swapping you the C1 I was using for an old SE 2000 a few years back. You oughta try their new stuff. Morgan has a demo program going for these.

I'm going to be posting some clips up this week of an acoustic guitar recorded on a pair of SE3's and a Titan and a dobro recorded on a Gemini.

Apple has done great under Steve Jobs command as CEO, and will continue
to do so, regardless of what idiots like MontlyFools try to bullshit us.
It's hard to argue with success!

that much right now, I'd get a single Kiwi off e-bay for \$1,200
to \$1,600 to pair with my current one & save a few hundred in
the process.

Right now I'd like to spend \$500 or \$600 range for a decent used
TLM-103 that someone might not be putting to good use.

>I was annoyed with Apple also.

Which in no way excuses Microsoft, their crap was criminal behavior which crushed innovation.

Apple's crap was stupid behavior which alienated potential customers like you and me while apparently trying, from their point of view, to survive Microsoft's crap. Which they did.

But between Microsoft's crap and Apple's mistakes, Apple lost a lot of market share and only recently has begun to earn some of it back. Would

Apple now be gone had they not gone all control freak? Dunno.

They've had to work pretty hard to make their strategy work, including creating much better hardware and software and branching out into content distribution and the hardware to do it. In short, they've had to innovate and become competitive. It hasn't all been pretty. But at this point they have an impressive product and a clear growth path.

Whether Apple has earned another chance from you is up to you. Whether Microsoft deserves your support is also up to you.

Linux is a much better choice if you don't like supporting a control-freak, market protecting, obsolescence churning strategies. Especially if you are of a mind to contribute development time yourself; perhaps the closest to freedom from "crap" currently available.

Cheers,
-Jamie

>Ok, so for Christmas I ordered a new Western Digital SATA 250Gig hard drive for my son's PC (that I, the Mac guy, actually help him build last summer!). Anyway, I thought what the heck, as long as I'm getting him one, I might as well get myself one for my new Mac G5 for a second internal drive. So the drives arrive from NewEgg and I install one in my new Mac (which, by the way, is the easiest hard drive install scheme I've ever seen). I turn the Mac on, but no new hard drive to be found. I restart and still no drive. I shut down, double check all my connections, and try again. This time I get a dialog box saying the hard drive needs to be formatted. Ok, now we're in business. I run Mac Disk Tools to format the drive and it freezes about half way through. I exit Disk Tools and look for the drive to try again. I can see the drive, but Disc Tools now tells me that S.M.A.R.T. is not supported for that drive (which I know is not true) and that the total capacity is 0kb. I can't repair, format, partition, anything. So now I think, this hard drive is screwy. I take the other one I was going to give to my son and install it. Nothing but a nice loud rhythmic knocking noise issues fourth from this drive. TWO DOA HARD DRIVES! This can't be true. Something must be wrong with my new Mac? Say it isn't so! Now I'm on a mission. I have my son take his Western Digital SATA from his PC so I can see if my G5 recognizes it. Install his drive and boom, it pops right up on the Mac desktop and I can see all his files and folders, etc. So now I've got two DOA WD hard

drives to return to NewEgg. BUMMER! The reason I bought Western Digital is because I've had such great luck with them in the past. Now I'm totally spooked. These are going back for a refund and I'm ordering two Seagate's instead.

Sorry for the long post. I just need to rant a bit.

TonyIt's really a trick, just patching to bounce autotune in manual mode..
If your track to be tuned is on track 1, put autotune on an insert. Select "external" on the eds insert. Assuming your using mec A spdif, in the Paris batchbay, patch the "Mixer A insert" output of track 1 (green arrows Bottom row) to Mec Master digital out L or R. Then Patch the Mec Master Digital In L or R (use same as before)to the insert "in" (brown, top)of mixer A insert. ALSO patch the Mec Master digital in (brown, same as above) to track 2 of Mixer A.

Mute track 1. record inable track 2. You might want to also change the input monitor to "Always monitor input" in the Project window, but you don't have to. you just won't hear anything unless your recording.

NEXT STEP VERY IMPORTANT:

you MUST make a physical connection (with a real spdif cable) from the spdif out to the spdif in on the Mec. Now you can autotune away and bounce your newly tuned track to track 2.

You can use the adat connections the same way as the spdif. Just make sure to loop the lightpipe cable from the in to the out on the back of the adat card.

I posted this about 3 years ago so please forgive if you've seen it before, but this was one of my career hilights, getting to play with Skunk at the Hardrock and XM radio studio's in D.C. He was attending classified meetings between the 2 shows I did with him, but he did say he was working on "geothermal guidance" ideas, which could basically put a missile through a bedroom window. Got to play "Reelin in the Years" as well as "China Grove" and "Long Train" with him. Definatly cool!

Rod
