7.3.

One question though, it

PT 7.3 LE, will that be able to be controlled by T/C, (MTC)?, as the show we are doing, (Australia's

Next Top Model), want's us the be the master clock for the 4 digital betacams that are shooting the show?

>>Hey David,  
I set Paris to word clock 44.1 and both 8 channel pre's to be slave @ 44.1.  
The Aardsync has 3 word clock outs on it so I ran 3 seperate BNC cables,  
one to each entity, and selected 44.1 on the Aardsync. When I enabled all  
16 tracks, they snapped and popped like crazy. So I put the Aardsync back  
in the case.  
Then I set paris to internal and ran a BNC cable from it to the first 8 channel

pre and had nothing to run the second 8 channel pre. Obviously, 1-8 were pop free and 9-16 popped like crazy.

>> SteveJames, once again, you went to one of those rigged Apple Video demos.

I build machines for studios who ar into video editing as well. And these studios are Mac based Pro Tools HD /Ala Final cut pro. However, they saw a Dual AMD XP(At the time) running Vega Video Pro, and they decided to go with the Dual Opteron running Vegas Pro / with the Matrox RT card. Most mac users find it hard to believe that aWindows based machine can out gun them on video editing, but it's true.It just depend onthe Application.. For Mac, Adobe premier and final cut pro have been Altivec optimized..That's great. However, on the windows side, Sony's Vegas Video as well as Avid Xpress, can run, render like nobodys business. AND , they could save a few bucks in the process.

>Well???

:DI have setup my mac as a duel boot with OS X. I master in waveburner wich comes with logic.

I mix back into Paris , export the files as Wav or SD2 and then import them in Waveburner in OS X. I do need an M Audio card for OS X .All works great.

I cant use ASIO in OS 9 sa it wont work with three cards, only one or two.

Hank

>No. Because when I use the clock in Paris to run one of the 8 ch pre's it works beautifully, but as soon as I run it with the Aardsync, it's as if the Aardsync wasn't even connected. I get snaps and pops through the roof. What my original question is, How do I know that the Aardsync is indeed even producing clock? It doesn't appear to be!
