its about the money and getting reimbursed for their R&D.

So I'm not the only one who thinks Chad Kroeger can't sing worth a damn? That a range of one and a half notes in a voice that sounds like it's processed through a metal wood chipper doesn't really substitute for actual talent?

Have you heard the split-track that was floating around for a while? The one with their first hit song in the left channel, their next hit in the right channel, and you realize they're the SAME DAMN SONG, right down to pacing, instrumental breaks, where they go acoustic, where they turn up the distortion, everything????

Ya you guys, I felt like I was blind sided by all of this. Very remeniscent of my first year with Paris, two mecs but no 2nd mec activity. The 'connect it to the last EDS card' issue that know one at EMU new the answer to. Unreal. Anyway...

I now have a spare magma and a healthy P4 3.0 comp waiting=20 in the wings for the next catastrophe.

Thanks again for your support!
Tom

BLOCKQUOTE></BODY></HTML>

-----=_NextPart_000_0023_01C83876.EE3694F0--I kept myself going for 12 years or so doing commercial music projects for local studios and production houses, arrangements and demo production for songwriters, and giving private lessons. I got tired of composing to other peoples specifications and making other people's creative visions real. I wound up with a backlog of about 300 songs of my own that I never had the creative energy left to work on. I've been making a lot more and I think a lot better music since I quit needing to do it for an income. I went back to school so I could do something rewarding for a good, predictable income, and make music purely because that's what I love to do.

I would probably enjoy doing film scores, but I'm not going to scramble to break into that at this point in my life. Besides, deadlines and I don't get along.

The other members of Sarahtonin all teach, but the eldest of them (32) recently asked me how long it would take to get a radiology degree and how much money he'd make. I guess I've been a bad influence. :)

Good luck,

Sarah
