OK, so I downloaded the demo, and it sounds really GREAT!

HOWEVER... it's a CPU hog, as you might imagine. On my Athlon 64 2800+ it takes up 20% of the CPU cycles, rendering it unusable for me.

Neil

Neillt was about 2-3 years ago, which in reality is an eternity in the tech world, so hardly a strong case against Dell - just one experience in general. I've seen some Dells on the other native DAW forums (Nuendo, Samplitude at least), so they work fine for a lot of people. This was also a system they had been using, not bought with video in mind - just bought based on price alone.

Why not hold out 5 years - Intel is promising 80 cores by then. 80... That should run a boatload of convolution reverbs at 24/192k.

Dedric

John,

Those other things frighten me. I'll stick with
the first one though.

Thanks,

Tom

"John" <no@no.com> wrote in message news:451c6970@linux...
Here's a few more you might like. Control Panel / Display / =
Appearance=20
/ Effects / "Use following method to smooth screen fonts" / Select =
Clear=20
Type. Makes fonts look much better.

Control Panel / Display / Appearance / Advanced / Item / Icon / Change =

Font Size to 12. This changes explorer font size and desktop icon =
size.

And attached are more registry thingies.

Enjoy.
John

At four in the morning, I didn't tweak to the fact that DeeJ
thought I was you, or you me....
Hope the new job is going well.
The other Kim

I too was going to make my own hangers out of wood.

I pondered over designs and finally I decided

that I couldn't live with the idea of a bad piece of wood
breaking and dropping my babies to the floor.

\$12 a piece for a steel design seems pretty fair for piece of mind.

Also, I only screw them into studs and use 2" screws.

BrandonJust put some sheepskin on it

I'm trying to decide whether to go to XP or stay on 98. Except for large
HD support (>137GB), I can't see a reason to make the jump. This might be
one more reason.

My PARIS machine is dedicated to PARIS.

Rich Kelley

The SSL C200 is an all-digital music production console that runs about \$750,000, and up.

t="_blank"><http://www.solid-state-logic.com/music/c200.html>

SSL took the same DSP chips and the exact algorithms of the EQ plus the channel and bus compressor from the C200 and built a box that uses Firewire to access the programs. They added VST, AU and RTAS plugins as controllers and have released the Mac version. It is about 1700.00 and sounds indistinguishable

DOmI am getting ready to upgrade to Drumagog 4. I emailed Rim to ask how I could have it both on my Paris rigs and on my PT LE rig. I got an email back within a half an hour saying they allow multiple installs on machines owned by you, so no problem.

I have talked with Rim a few times on the phone over the years, and what a pleasant guy to work with. I sure everyone had customer service like this.

Thanks, Rim!!Hey Nappy!! Man. It's great to hear from you. I hope all is well wit and the family!! :)

Yes, I'm still a BIG Mpc fan..It's my goto sequencer for 90 percent of my work.

Currently, I have a separte PC for Drums(Battery2,Stylus RMX, Stylus-Vintage, DHK-Custom-Vintage

>I wish I had some big bass drivers in the back and a 1000W

>power amp.

Hehe. There's a Juno-60 doing the bass for most of it. When I first designed my main bass sound and did a mix in the studio, I mixed on my main system, but then did my final mix test, as I do, on my little wee computer monitors, just to check that the final MP3 was going to sound half decent on Joe Average's home computer, when I found I could hear almost no bass. Turns out the frequency was just too low. Had to stick a big boost in at 250k or something to get some upper harmonics happening...

....but put that baby on some nice subs and you'll hear the root and sub oscillators. Mmm... Juno-60... ;o)

Cheers,

Kim.TC <tc@spammetodeathyoubastards.org> wrote:

>I'd like to hear it with a bit better blend in the mix, but it's very cool.

Some of it certainly wants a proper mix process to take place. Basically, with a couple of exceptions, the process to date has simply been record it, edit it, and bounce it. Basic effects have been added, but there's almost no eq on anything, and even actual levels are quite rough for the most part. I will certainly go back and take a look at that at some point.

Thanks for the feedback. :o)

Cheers,

Kim.

>TC"macle" <Mates9999@cs.com> wrote:

>Sounds great. A very big present sound, especially considering

>how fast you did it, plus the MySpace encoding.

Gee thanks. I must say I'm very happy with the sound myself.

To let out a little secret, my method has a slightly dodgy side, in that all the audio runs through two Akai MB-76 "audio mix bays" before getting to the system, which are busy in there adding noise and reducing clarity. These things are way cool as they let me just press a footswitch and, for arguments sake, patch my Juno-60 into my ol' school guitar footpedals, or into my Quadraverb, or both, or into the GNX-4, or into all three, in whatever combo I like, and then do the same for the digi piano or for the EPS. It's way cool functionality wise because I can get any sound I'm likely to want without any manual patches taking place...

....but I was kinda worried that it would take some sheen off the sound, so your comments are very much appreciated. :o)

And I'm loving the method. In terms of speed, efficiency, inspiration, and just sheer fun, it's the best thing since, err... actually I'm struggling to think of something better. ;o) Paris? ;o)

Cheers,
Kim.

>Heh. Yeah, they sit out NAMM sometimes. Apple didn't exhibit at Winter NAMM when I covered it for MacWEEk a zillion years ago. I dinged 'em for it in the mag. The director of music marketing over there was a bit miffed. Whatever.

Fact is, Logic has had several updates this year already, including fixing some moldy bugs that HAD to go. It has finally gotten to the point where I can actually recommend it.

The feature set is deep and, frankly, amazing. The included collection of usable and good to great sounding plugins is much appreciated. On a dual G5 it's very efficient and capable of way more tracks, FX and soft synths than even my most overproduced excess would need. The current improvements in stability makes it a workhorse around here. The support for both Intel and PowerPC Macs will be extra nice when I get a fast Intel Mac laptop in a few months (holding out for the 64 bit chip).

Now that Logic supports the quad boxes, it's just showing off. Naturally there are a few more things the Logic team can do to improve it here and there, but rumors of its demise are more than a bit premature, folks.

Taking nothing away from the other programs which have also been improving lately - and good thing, too.

Cheers,
-Jamie

The GNX4 has also been an inspirational composing tool here, too. I've written a number of new songs for my solo show that I multi-track live on stage. Way fun!

Cheers,
-Jamie

One thing I've learned about the GNX-4, compared to either the GNX3 or the BNX3, is that it's actually slightly inferior for live looping. On all four of them, when you are running a loop, you can simply depress the play button on the unit and it will return to the start of the loop. On the B/GNX-3 this is an excellent tool live for keeping in sync with a band, as it allows you to resync the loop at the start of the bar, however unfortunately the GNX-4 has a horrible almost random delay in it when you press play, so if you try and resync the loop using this method it will end up out of time. On the B/GNX-3 the response is instant, but on the 4 it's not, rendering the feature fairly useless.

I suspect it's because the 3 series have onboard memory where I'm suspicious the "working loops" are stored while in operation. The 4 I think works directly

of the CF card and hence communications is a little slower. I've been meaning to write to digitech about it in the hope that they can fix it in a firmware update, but I'm not holding my breath. If you get a moment perhaps you could/should do the same. The ability to resync the loops in a live scenario would be, well I don't have to tell you how useful it would be. ;o)

But it's a great tool none the less, and I'm loving it. :o)

Cheers,
Kim.

>> Kim.Hey Jamie,

I can feel your un-dying love and loyalty to Logic.:) However, I'm only stating

my opinion from the trenches from both small and large studios.
When you talk to producers or programmers today and ask about Logic audio, they all answer with "Yeah, I know Logic is cool, BUT....Always the But..

They, Logic are on an deserted Island these days. Not supporting the Windows Platform was a major mistake. And I'm affraid, that If Apple does not change it's course Sooooooon, Logic will go the way of Studio Vision and so will Digital Performer.

Unless Apple starts packaging Logic Pro with every dual Mac(throw in), I cant really see them making any market penetration.

best

DCI used to drink Fosters in another life.....those big litre steel cans.
Man, those things got soooooo rank with the metallic aftertaste once they
had been chilled and then warmed up a bit.....which was always a good
excuse to drink 'em quick.

Yikes!!! ;o)

respect

NappyOk then,

My nudge increments and Sampleslide presets are as follows with the buffers set to 512 on my audio machine

For buffer latency compensation nudge 10 + 1 left and then apply 48 samples in Sampleslide.

For one UAD-1 plugin nudge 10 + 1 + 50 and then apply 818 samples in Sampleslide

For two UAD-1 plugins nudge 10 + 1 + 100 and then apply 1588 samples in Sampleslide

For three UAD-1 plugins nudge 10 + 1 + 100 + 50 and then apply 2358 samples in Sampleslide

For four UAD-1 plugins nudge 10 + 1 + 100 + 100 and then apply 3128 samples in Sampleslide

That's as many as I've ever used on a track so far. This has not been measured by bouncing and comparing the files yet. It is strictly my ears listening for flammings/phasing but it sounds **very** tight on my rig.

As far as routing to auxes is concerned, that going to take some serious explaining and will take me a while to type it up. I don't have the time right now but I'll try to get to it tonight. It will only work in Cubase SX in version 3 with external hardware, but VST hardware should be able to be applied as a send effect in Cubase Sx to the Paris track you're processing in Cubase. I'll get to it when I have a bit of **typing time** It will also likely involve nudging the Paris track and compensating with Sampleslide as well on the track you're processing. I'll have to check.

Stay tuned,

Deej

Take your time Deej.

Don

ps. just pretend you're talking to me when you write up the routing scenario

;-) http://www.sonalksis.com/index.php?section_id=99 Well, I know Mark Altekruise, he is now Sr. Marketing manager for Apple Audio, he was national sales manager for Korg USA, and has worked in the industry for years. So I think they have a lot of good industry guys working over their now.

Will they take PT, I doubt it, but anything is possible. Will it compete on a professional level? I think it already does, and it will only get better.

ThanksLook for Arvid Solvang on the Apogee site www.apogeedigital.com/users/
Former PARIS and Logic PC user. Now using a MAC(this for LaMont)

respect
Nappy

Opinions?

TCBdefinatley useable.

power hungry thing goes.

actually combining more than one of them on a channel can produce some
really nice q's. you might want to try the eliosound eq as well.

supposedly shipping mid-month.

I'll be evaluating whether there might be any advantages to using GR2 instead of the GNX4 at some live solo shows - I'm curious if the looping is more flexible.

If the guitar amp/cab models are on par with those included with Logic, it should be more than fine for practicing. You might even be tempted to drag a laptop to gigs...

Cheers,
-Jamie

Have you checked out the Toneport's from Line6?

I purchased the 2-port (UX2) which has really worked out nicely. It has guitar amp/cab, bass amp/cab, mic pre, and microphone modeling and is compatible with the Line6 add-on packs.

Quite a good deal for the money, IMHO.

Best wishes!

Mark
