Shuteye? Me?

No I'm at work. It's 10:53am. I've been up for hours!

Cheers,  
Kim.

Cool! If all the mixes have the low-end grunt like this one, it'll be  
one hell of a sophomore effort.

Put me on the list for a copy.

>

Yep.

I'm sure part of it was Downes as well...

I saw them on the first tour. They played a new song they'd been working on called "The Smile Has Left Your Eyes".

Wetton doing just vox. Palmer standing up front playing a simple pattern on some sort of drum machine (based on the era, probably a Linn), Downes playing piano, and Howe playing acoustic.

Simple, beautiful. Stunning song. Couldn't wait for it to be recorded.

Then "Alpha" got released, and I was shocked. Saddened. Infuritated.

"Smile" had become a bloated, overblown, overhyped, overproduced, overorchestrated piece of keyboard-and bell-laden bombast. The stunningly simple song I fell in love with was completely gone. Never forgave them for that.

Too bad bootlegging technology of the time involved sneaking a tiny cassette recorded under your coat - in the current era of DAT and CF recorders and hi-performance condensers, I'd pay good money for a copy of that concert.

around, especially at close to \$3k.  
The effects that come with the Sapphire have no reason to be on  
hardware. They are very weak sounding. Much nicer plug ins are a  
available for free out there. Plus the unit that has the effects is  
\$100.00 more than the one that doesn't and the cheaper one actually has  
more analog I/O. Kinda Silly.

www.adkproaudio.com <http://www.adkproaudio.com/>

(859) 635-5762 I have heard from folks who have used both, that the UAD-1 compressors have a more realistic feel to them. The main complaint is that the attack/release characteristics of compressors are not as realistic in convolution.

I have a video here that is about 175MB showing one of these processing a trance track. I thought it was able to accomplish some pretty drastic things, but it's hard to know from an MP4 whether or not these would be good things or bad things.

I don't mean to slag this thing right out of the chute, and once they write drivers for a \*real\* computer, I'm gonna probably give one a test drive. ;o)

does not model the real attack, release, and timing attributes of the original  
units, and this is a big part of the sound of any compressor. As a result,  
all the compressors have a similar feel, but with the harmonic sound of the

The EQ options were a little more disappointing for me. In a direct comparison  
to HydraTone and AngleTone (beta), I had a strong preference for the TriTone  
sound.

The hardware interface and DSP relief are indeed benefits. I do wish the  
hardware unit chased the selected channel in the DAW. That was a big disappointment.

My friend is happy with his purchase, but I am still undecided. One reason is that I am still contemplating getting a Duende and I am reasonably certain that even with a dedicated Firewire card added to my Mac, I could never get both units to work together. I am hoping to borrow a Liquid Mix to use more extensively in my room.

GeneMe too! especially since its a firewire unit.

>Lamont,

I know you are a big fan of the Akai MPC's,what do you think of the MPC 4000?

is it worth the money? I had been thinking of getting a used one,but I'm

leaning towards a Trigger finger and Ableton Live. I already have a laptop

and Reason so Live is looking better plus they seem to have frequent updates.

Let me know your thoughts. I'll be mixing in PARIS. Thanks in advance.

respect

NappyTo Think,

I almost sold my last Bundle-3

SSL 4000G/W E Series EQ 7 Comp

/56 channels and those plugins sound just like the real things.

So, I went to load up the VST /RTAS version demo to try out in Paris & PT-Mpowered.. Needless to say, the SSL plugs sounds Wonderful in Paris.. Like Paris really needed the help :)..But, it takes our beloved Paris sound to newer heights. In Nuendo & PT, same results.. In those apps, you can hear the coloring as soon as you insert them on a channel!! :)

These days there are some great Native Plugins that can hang with UAD. Like the URS line.. Their Neve, API, Pultec, fairchild,etc emulations are sweet!!..

With Intel announcing 80 cores on a chip in 5 years.. Native processing will take over and we will soon reach BrianT coveted 64 sample stability with Zero latency native thru a DAW..

All in all, we are seeing the fruits with Sonar 6..Wow wahat a beauty!! And the new featuers coming from Cubase4. Again WOW!!

SCOTTY!!! - or more precisely, less CPU load (rememeber, I'm  
running at 24-bit/88.sk, and a LOT of tracks!), so the LiquidMix  
or Duende are looking interesting to me.

Like the quikquak demo that I tested last night... takes up 20%  
of my CPU power all by itself - sounds great, but I can't use  
that kind of resource hog!

>Hi Guys. None. These plugs are very efficient. Here is what waves suggest  
and really as shed some light to the Native plugin dilemma.

Waves says in the SSL documentation that these plugin require that your DAW  
run in 32 bit Video mode. If not,(And I have personally witnessed running  
in 16 bit mode) these plugins are sluggish and will bore down your system.

Plain and simple: The better your Video card is, the better overall performance  
you'll get with using the SSL plugs.

This is a revelation of sorts because, as Chuck Duffy once explained to me,  
The UAD PCI card is no more than a nice Video card. It seems that waves  
have tapped into this technology of using the video card's dsp accelerators  
to enhance the performance of their new SSL Plugins.

Suffice it to say that, the better the video performance, the better performance  
of these new plugins..

So you basically use your MPC for the sequencer? I can  
see why you like the Korg box with both a MIDI and USB output as well as  
the XY pad. I hate the sequencer in Reason and hope the sequencer in Live  
is better,if not,  
I'll have to get Logic express for sequencing. So now I have to decide between  
the  
Korg controller and the M-audio one. Do you have the Trigger Finger?

respect

Remember when TC brought out their Powercore? To this day, both the PCI or  
Firewire version will tax your PCI buss performance. This is why folks are  
using Magma Chasis for runing multiple UAD's and using DUAL processor with  
Dual PCI buss Channels.

If all you have in your DAW is a Single channel PCI buss setup, you are actually  
degrading the overall peformance by imlementing these so-called Powered plugins.  
You ever see some of those Super Daw boxes over there on Nuendo.com user  
forum??

Lead by our very own Brain Tankersly. They found out by massive research  
that to run those Powered Plugins optimally, at a decent latency, your'e  
need have a Dual channeled,high end Dual -core Opteron, Now Conroe Intels,  
with at least 8 gigs RAM..% gigs per channel. Withthe UADs and Powercore  
on their on PCI buss.. :)

I said all that to say, that TC has never really had great Asio drivers,  
so their performance is not that stellar. Same with Duende, the Firewire  
and Asio drivers need a lot of work. From what I'm told, writing good firewire  
drivers is easy.

So, Neil you do have choices in how you want to implement your Native solution.

Take care LaMont

cs.

Microsoft is more reluctant, they prefer proprietary DirectX.

On both of these platforms, a host of 3D animation software depends on OpenGL.

Cheers,

I have the Waves SSL plugins and I agree with everything you say about it.

As to the future of low latency native systems: Symphony can do 1.8MS at 64 samples right now.

<http://www.gearslutz.com/board/showthread.php?t=80936&highlight=Symphony>

I think Brian and others are getting similar results on PC systems with new RME Beta drivers. No need to wait for 80 core computers.

As to efficiency, I can run about 80 channels of the Waves SSL plugins on my MacBook Pro. Sony is promising the Oxford plugs for Intel-Mac (RTAS) will be out within a few weeks; I hope the efficiency is close.  
Genelf this is true, and I suspect it is if you say so, it's amazingly stupid.

Too bad Waves wasted time on using Open GL for the SSL plug ins. Not sure why they did it sense future versions of Windows and Apple will not have Open GL support at all.

The funny part is that the TC and UAD have tons of compatibility and performance issues on dual buss/ dual cpu systems like the Opteron. especially if they are running Dual core CPUs. Mainly due the AMD 8131 chip set. Only way around it is to buy a Magma and put it on the 32 bit slot which shares with almost all the motherboards on board components. The only dual buss Opteron board thats works fully with the UAD and TC

power core on all the PCI-X, PCI slots are ones that use the AMD 8132 chip sets. UADS and Powercore work best on single socket, Intel and ATI (AMD) and dual socket AMD-8132 and Xeon wood crest based chip sets. You can easily run 4 in any combo of PCI/PCI-E on any of these boards without an abnormal CPU load.

> on their on PCI buss.. :)

On the majority of all the Conroe based Motherboards same as on single socket AMD boards there are only 2 buses, PCI-E and PCI. Virtually everything except video share the PCI buss. Running a combo of PCI-e and PCI versions of the UAD/TC cards will be the only way to run them on separate buses. There are a couple of high end workstation boards that just came out with 3 buses, PCI-X, PCI and PCI-E but are very expensive.

Personally I think companies are doing it wrong by using firewire for doing DSP this way. Firewire like USB is a very limited bandwidth general purpose connection. Everybody is going to put drives, sound cards and who knows what else on the same firewire buss. If you have to put in separate firewire card for each device then what's the point of firewire. :)

It would make more sense for them to have a PCI-e host card and an external box that you can add DSP cards too to upgrade the processing power. Huge amounts of bandwidth is available on even a 1x PCI-e slot. Far more than 5 PCI slots worth of DSP could be run from one card.

Neither the TC nor UAD use ASIO drivers. They use VST and special hardware driver that the VST plug ins communicate with.

>Hehe, well we COULD be doing that ;o), though we live in different cities.

Kim W came to visit Melbourne recently, but we successfully failed to hook up, despite him staying not far from my place, which was unfortunate, as I was hoping to swap toothbrushes. ;o) As I recall he told me he sent me a text when here, but I changed mobile numbers around that time and I think he had the wrong one... ...I never got it.

Kim W has been dropping in here to the group since the very early days also...  
...I think it was '98 or '99 when I realised that the group had another Kim also from Australia.

Cheers,  
Kim.

Cheers,  
Kim.

Hehe, it's an oldie, but it still made me LOL. ;o)

....because I know it's true. ;o)

Cheers,  
Kim.<http://www.versiontracker.com/dyn/moreinfo/macosx/24742>

Finally. Doesn't matter for me (dual processor) but for those who have  
been using quad boxes this is a welcome update.

Not that Logic is likely to out of juice on two processors, but I'm sure  
it's fun to watch all the CPU meters moving. :^)

Cheers,

Waxy is good. If BF (excuse me, DigiBomb or whatever) could figure out how to do a FFT of "Waxy", there would be a \$1400 TDM plugin of it.

pabIf I know I always want the guitars/banjoes/mandolins to always face sideways isn't there a way to build one out of \$10 of oak?How about we find out who has the most awesome Paris setup and spend Christmas at his house. Let's all just show up. So what's DJ's address?

hehe,  
JohnYeah, OK, but are you really Kim.....or are you Kim?

;o)

In High school, one of my best friends parents was considered the best Scully repair person in the NY area. The dinning room in their suburban home had a vertical milling machine, where most of my neighbors had tables and breakfronts from Sears.

Oh yeah, and it was his mom.

Avery Elkins was her company. Her husband was a principle in Brunswick Tape

house on the block.

The Scully 280B series had good electronics, but the transports, especially

the servo motors, were very problematic.

GeneFor sure, Uad is not going directx. The Pro Video market would not stand for this. The Pixar's, SGI's workstations..Not to mention, Final Cut Pro, Avid..Nahh. I don't buy it..

Again, the waves SSL plugs are wonderful..Matters not what platform it was coded in, just as long as it performs..

[chrisl@adkproaudio.com](mailto:chrisl@adkproaudio.com) HI Neil,

Yes thats pretty much one of the main reasons. I think the cross platform part also comes into play in this.

Chris

Neil wrote:

>Of course no one is going to use direct show on OSX.

Direct show/Direct X is proprietary Microsoft stuff.

OpenGL is a multi-platform open system.

Last I heard Microsoft was finding ways to make it hard for software  
companies to continue to use OpenGL on MSWindows but at least some  
software companies were fighting that. Dunno how that's been working out  
but it seemed pretty fishy.

Here's the OpenGL info page:

<http://www.opengl.org/about/>

OpenGL on the Mac: <http://developer.apple.com/graphicsimaging/opengl/>

Cheers,

-Jamie

ight rhythm  
    electric 2 right lead

electric 3 left electric 4 right

5 freaking guitars !!

Neil Young.....Old Man

Guitar panned 90% left  
Vocal center, more verb in right  
Bass center  
Piano center very quiet

banjo comes in left  
slide guitar with nice reverb center mono

Stereo vocal harmonies

Share your own !! ThanksThat's very interesting. Yesterday I bought two NVidia FX5500 dual head  
viideo cards (AGP and PCI) with 256MB of VRAM on each card. I'm getting  
ready to put my Matrox G450's (32MB per card-16MB per video head ) out to  
pasture. I've been very happy with the one I've got here in my Cubase  
machine. It will be interesting to see how these work with my Paris rig on  
Win ME. If I like the Waves SSL and the URS plugins, I'll probably build  
muyself a new Paris rig using my Gigabyte NForce 3 chipset based mobo, see  
if I can get Paris working on a dual core CPU and start running Paris on Win  
XP again. I've got a dual core 4200 sitiing here and I'm going to do some  
experimentation with getting it happening with Paris. Otherwise I'll see if  
going with an XP 3500+ CPU will give me enough horsepower. If these work,  
I'll likely sell 4 x of my ADAT cards, 3 UAD-1 cards and 2 HDSP 9652's and  
retool my situation completely. As I said in my other post to this thread.  
I'm getting tired of mixing on two DAWs and I'm not ready to get rid of

Paris. I just want that \*reality\* that I get with the UAD-1 plugins in Paris  
witho

>> Anyone played with Waves S1 Imager and Roger Nichols Stereo Analyzer? You  
can use S1 to reverse channels and put all left or all right in both channels  
and with Stereo Analyzer you can see how much correlation there is between  
the left and right channels.

It's amazing how much stereo imagery you can get with stuff that's 98% correlated (example: moonlight feels right). The mix is pretty mono with rhodes left and vibes keyboard right. DOubled vocal in mono! Kewl stuff. Here's another one for your comments. Load the song up and tell me what you hear.

Canned Heat        Going up the country

flute copied with delay in left to thicken  
eq left: roll off all lows eq right: roll off all highs

doubled guitars with delay in left to make 2 distinct guitars  
very lo fi guitar rhythm left very lo fi guitar left octave lower  
eq left: roll off all lows eq right: roll off all highs

bass / drums center with narrow image just off center

vocal dead mono ! heavy compression? Ah yes. The good old days.  
My first Paris recording was for a then Adelaide based 70's influenced soul/funk outfit called Goose. (now Melbourne based). At any one time they have some fifteen members.

Early versions of Paris had a bug which would corrupt segments occasionally, leaving the project unplayable. I emailed the .ppj (minus audio) to Edmund, and within an hour he sent it back fixed. The session continued.

This album (and the sequel) are still being used by a couple of audiophile hifi shops in Melbourne as one of their system demonstration disks.

>I've got a friend here with both the Waves SSL bundle and the URS "All EQ"  
and a couple of their other compressors. I'm gonna test drive them over the  
weekend. If I could find something that I could use in Paris that would  
allow me the sonic mojo that I get with Cubase SX and UAD-1 plugins, I'd  
sell 3 out fo 4 of my UAD cards, and a couple of my RME cards, put the money  
toward these plugins and go back to mixing 100% in Paris with the Cubase rig  
as a sequencer only and for the occasional Hi Rez project. I'm just plain  
sick and tired of mixing on two DAWs. though the flexibility is beyond  
belief, it's such a PITA.

>For anyone who wants to check out some tunes from your favourite newsgroup  
host, please check out:

<http://www.myspace.com/drschnauberg>

I'm in the midst of a work ethic/method revolution, where I try and produce songs within the space of only a couple of hours. All these tunes are recorded mostly on my GNX-4 looper, then transferred to Paris and vocals and solos are added. It's usually about a 2-2.5 hour turnaround for a complete song.

And yes some of the recording methods are dodgy... yes I need to get a pop filter for the mic, and yes the harmonies in Revision need work, but hey, it's music, I'm getting it done quickly, and I'm having fun, and I think the vibe is there. :o)

Tell me what you think...

Cheers,  
Kim.Good stuff. Great live vibe!  
Overcompressed?, maybe a little for my tastes, but it would sit well on radio, and does so on small systems. A matter of taste, really.  
I didn't master the Goose stuff, but I remember hearing the first mastered version of "schwang", and I felt it didn't breathe enough. I told the band, and they got the mastering engineer to back off the processing, and the result was much better.  
As it turned out, the final master sounded pretty close to the final mixes, but louder.  
Perhaps for commercial airplay the first master would be better, but the band decided to opt for the transparency of the second.

As I said, matter of taste.

Go to the goose homepage and you will find a list of outlets that stock the cd's. There are a couple of full songs on the page, but I think "rump" is a rough mix they posted.

Failing that, I could check with Dave, and send you a couple of "evaluation" copies if you wish. I don't have spares of the prints.

Email me your postal address.

Kim Twosheep.

ut the latency.

Thanks for the heads up.

Deej

>I'm going to make a serious attempt to get Paris to work on a Gigabyte K8NS  
Ultra 939 mobo with an AMD 64 4200 x 2 CPU. So far, to knowledge, running  
Paris on dual processors hasn't been achieved with a working C-16 scenario..  
There was a tool released by AMD a while back that \*might\* change this  
scenario, though I have no idea if it will.....but nothing  
ventured.....

To my knowledge, the problem was with the C-16 not responding. I'm too busy  
here to tear down my Paris rig and drag an EDS card and a MEC out of the  
snakepit and into my workshop. I don't have any spares. All I would need is  
an EDS card. An IF 442 would be nice, but I've got an IF 2 I could use here  
if necessary and I can liberate one of my C-16's without screwing the pooch.

Call me if you're up for loaning me an EDS card/442 for a few days. If I can  
get this to happen, I'll document it and we can put it in our bag of tricks.  
970-375-7081.

DeejDude! Best music EVER!! ;o)

Kim Double Ewe? Not Kim Dubya? ;o)

Where can I get the full tracks? That is honestly really excellent.

Check my effort from around that time...

<http://www.mp3.com.au/artist.asp?id=91>

Cheers,  
Kim.

Gee, doesn't What You Need sound overcompressed these days? ;o) My ears have certainly changed. I remember mastering that and thinking that compression was the best thing since Paris...

....turns out it's all a little too squished really. Should have just pumped the Paris mix bus a little harder...

Cheers,  
Kim.

I didn't see any links, but I didn't look that hard, and my monitors aren't all that bright. I'll have a better look. I'm more than happy to shell out the cash as it's excellent work.

If I get no joy trying to track down a copy I'll let you know. I've just gotta get my hands on that though. Right up my alley...

Cheers,  
Kim.

>Hey DJ,  
I feel your pain..As I and others have been witness to your quest for 2 system  
perfection.

For me, in my personal studio, I conceded that onmy Dual-core Opteron(PT-M(48  
stereo), & Nuendo) and I have A Paris machine with Acid. With a KVR switch,I  
choose the DAW that fits the song..One DAW at time:)

One thing that I can vouch for is the use of a analog mixer to sum , even  
with Paris. Just by using an old Mackie 1604vlz, you can hear the difference  
with just a stereo (2track) sub into the anolog mixer. Having a analog mixer  
will definitely smooth out Cubase /Nuendo's summing. Thus, letting the mixer  
push the app for a more aggressive sound.

I'm analog summing believer. Even with these great new Plugins, Analog summing  
can make the difference.  
P.S. Those Makie Onyx mixers are awsome for summing..Then you get those nice  
Pres..

While I'm happy that Logic audio is still in existence, It's really losing  
ground in the DAW market share, as well as Digital Performer. Hummm ....I  
wonder why??

Could it be that by closing it's door to the Windows platform, pretty sealed  
their fate???

Since Apple gave Intel-mac user's Boot-Camp, they should stop this charade  
and go back to supporting Both Mac OSX and Windows.

I Love Logic Audio, but when Mr Jobs closed it's doors for us Windows users,  
I stopped using the product.  
Now, it the Pro Audio production game, logic has lost a lot of it's luster.  
Mac users are using Pro Tools 7x midi sequencer these days.  
And, I still say that Logic's main problem is that their Programmers are  
beholden to that 1994 GUI. By todays standards, it just does not play. Even  
Cakewalk Sonar looks more profesional.! Yikes!! Man, what a F....in waste  
in what is still thee best sequencer in the world..But, when you stop evolving,  
you die.. I'm afraid that if Logic Audio does do something Radical Soon (Winter  
Namm2007) there toast..

Bright-Side: They are struck this monumental joint agreement with Apogee  
with the those PCI-E cards and Firewire interface. Nice. Problem: Apogee  
does not know how to write good drivers, at least firewire drivers. Soundtrack  
Pro looks and runs and behaves like a modern pro DAW app should run. I hope

and proay that we are looking at the the Future of Logic Audio/via Soundtrack Pro..Pleaseeee... :)

<http://www.goose.com.au/multimedia.php>

There is a link to two mp3's and a bunch of videos.

<http://www.goose.com.au/index.php>

Here you will find a list of retailers.

Will check out your stuff further on the studio monitors. Sounds great so far. Gotta keep painting the spare room right now.

I recorded a band called "Dragster" some years ago on my fostex b16. I will post a couple of songs somewhere and give you the links.

They were a scream...should be up your alley also.

In fact I'll start a new topic for the benefit of others overseas. Their stuff was priceless, wildly funky and funny as all hell. (very Australian as well).

Cheers.

Cool vibes, cool grooves, cool music! Sounds good Kim, keep going. Don't worry about production values, their good enough. You can worry about perfection later, just get your music out of you.

Good job!

Thanks heaps for that. I've downloaded the two MP3's and am having a listen now. Sounding excellent. Is this all your work or was some done elsewhere? I'll have to check these guys out if they ever come over this way.

And do post about that other group. I'm very keen to have a listen...

Cheers,

Kim.

> I'd be dead now"A bit of a sidenote, but interestingly Cubase 4 and Nuendo 4 apparently  
won't support DirectX plugins anymore (don't know about video or driver  
support - I'll have SX4 Monday to find out I hope).

I don't know if that implies anything in particular, at least in terms of  
the longterm plans for DirectX, and Directshow vs. OpenGL, etc; could just  
be Steinberg's attempt to push VST3, or just get rid of DirectX headaches  
once and for all (since it is a more limited plugin format than VST).

The reviews of Liquid Mix I've read haven't been stellar. I'm holding out  
for a Duende at some point.

Me like.  
I thought I would hear some Ausi-funk :-(

GeneCrikey! Actually, I'd probably fit right in with the fauna. When I was a kid, I had a minizoo with snakes, alligators, turtles aanything else I could catch in the local billabong. I did stop drinking over 15 years ago. Can I be an honorary Aussie and not drink beer? I suppose there may be other kinds of \*little creatures\* you could bring to a pub, but ingesting them might cause problems/get you arrested.

;o)

Yeh, it's not funk. It's somewhat funk influenced, but not funk.

Odd, it's playing now for me. Probably the closest to funk of the bunch...

Cheers,  
Kim.

Thanks heaps. Nice things to say and I very much appreciate it.

The production does need improving somewhat, but as you say, it's not that far wrong. It can be fixed, most of it in the mix. Step one is to get 30 songs done and whittle it down to one good album. So far I've done ten tunes in about 6 weeks, so three more months and I should have about 30 to choose

from.

Pick the best and go over them with a little more attention to detail and I should be right to... err... sit in this back room and burn copies of it for my friends. ;o)

Cheers,  
Kim.

Present set up is MEC A - ADAT is in slot 5 (it's original slot)  
MEC B - ADAT is in Slot 1

Should I swap MEC A's ADAT to slot 1 or Slot 3

DOn

Slot 2) 8 in  
Slot 3) 8 out

I'll get back to you when that is done...1/2 hour or so

DOn

>Hi, Rich.

Sorry, your post slipped under the radar.

I was running these cards under win98 prior to switching to XP earlier this year. Drivers are available.

[http://seattlepi.nwsourc.com/business/287061\\_applebook30.ht ml](http://seattlepi.nwsourc.com/business/287061_applebook30.html)

I got to meet Steve Wozniak in 2000 when he gave a speech at MacGroup Detroit. [www.macgroup.org](http://www.macgroup.org). He told the story of how he created the first practical PC. the story was vary interesting and his antidotes were vary funny. His father was a rocket scientist/mathematics guy at Raytheon corp., he taught Woz advanced mathematics. Woz use mathematics to shrink down the size of the chips to make a smaller computer that could do more tasks. He also figured out that he could use one chip that could do three things, instead of three chips, and save more space and money. He did things like adding an electric typewriter key board and a CRT monitor.

He changed the world, companies like IBM more than likely, would have kept computers corporate and vary expensive. He made computers more affordable and accessible to everybody. Woz was definitely a whiz kid.Hi DJ

Bingo !!! all is good with the world

Thank you

DOn

ps. Dave...thanks you actually beat DeeJ to the pucnch with the solution by one minute

 >Hey Jamie good points. I think most if not all former users what Logic Audio

to survive. I certainly do, But, :) we want on our terms. we like apps that we run on both platforms. That way, should one platform oushines the other, no problem, just get the CD/DVD out and load away:)

Seriously, I don;t know is on the minds of Emagic and their love affair with that very dated interface, AND audio editing.. What Gives!!! If Apple can develope a great audio editor in Soundrack Pro, WHY NOT LOGIC!!! I think that one feature item is what really keeping folks from forking over the Bucks for a Mac, then logic audio. Do they (emagic) know how to implement an modern audioeditor?? OR , are so arrogant, that just continue to snub their noses to anybody who keeps suggesting that their interface looks like a dated science project. Even their fellow one time German Daw partner, Magix (Samplitude & Sequioa) have implemented mixer skins that are visually appealing. Giveing their apps a pro look. Looks count. Okay, I digress. It just sickens me to know end as to why they (Apple-Emagic) won't take the bull (Digedesign) by the horns and bring out -once and for all. A Complete-Re-write of Logic Audio. New interface, New Audio engine, new audio editor..very polished..???? Is that too much to ask??? Sheeeshhhh.. They have Apogee, now, give us (hosessitting on the fence) a reason to fork over 900.00 bucks.. I's their call..

Meanwhile, Pre-orders of Cubase4 and Sonar 6 are on steroids. And with a new rumor of a new PLE & M-powered on the horizon, Apple, is starting to look like the minor leagues of Pro Audio, when they were expected to become THE PRO-Tools Killer!!!  
What happend??

Most Australians don't / won't drink Fosters...sure says something for their  
OS marketing though, doesn't it?  
BTW, I think those 1 litre cans were only for export or made OS. Don't  
remember them here.

>Well Emapple HAVE been rewriting Logic, it's improved significantly during the time I've been using it.

Have you been following the updates over the last couple of years? First they added a ton of good to great FX and instrument plugins and some new features. Then they went back and did some UI cleanup, audio engine remodeling and bug fixing. What exact additional features do you desire? What, exactly, do you find missing? What part of the current audio track editing or waveform editing don't you like?

Regarding MSWindows - I understand that's an issue for some folks (particularly those who didn't switch when Logic went OSX-only), but really, this is not an issue for everyone. It's kinda late in the game to still be complaining about that, either switch to OSX (a very good OS) or give up on Logic and know that just because you gave up doesn't mean it hasn't improved tremendously and people aren't using and liking the current version - it's a much better program on OSX today than it was on MSWindows four years ago, or however long it's been. For that matter it's a much better program on OSX today than it was on MacOS 9. I'm no fan of either OS 9 or MSWindows for my own OS snob reasons, but OSX doesn't suck too badly (high compliment).

At this point I'm OK with seeing the development team continue to optimize Logic for OSX as they continue to rewrite and update code. If there's a problem I can complain to a single company to fix it - as I did when the Apple rep came to town earlier this year. Whether that had anything to do with it or not, the bugs I complained about got fixed.

I would like to see Emapple continue the process of moving things from the Environment and into the Arrange window. The manual control in the Environment is powerful, but some of that could be made easier and put into the Arrange. It's not a prob for me, I know my way around the Environment enough to do what I need to do but it would help with the

learning curve for new users to keep up that trend - they've already done some things toward that end.

I do like that I can arrange multiple mixer windows however I want them, size the Arrange window to fit, add a transport and I have a really good view of the project on my 24" widescreen monitor. Views are automatic and I sometimes use multiple views to arrange windows for different tasks, but for the most part one view and a big monitor is golden. They've improved things tremendously by letting users drag plugins around on the GUI and allowing whole racks of FX to be saved and recalled. I would say the interface is not "dated" so much as "really, efficient." I'd hate to see them lose that efficiency in an effort to be glitzier.

The color scheme is OK with me but I can see where you might like to have control over that. When the color scheme hacks came out for PARIS I thought they were interesting but there again, I was OK with the color scheme for PARIS.

The main questions for me are does it do what I need, within budget, and does it sound good. Yes to both. In fact it exceeds what I need. At this point I really appreciate the power on my studio desktop.

Again, there are other systems that also work well. A lot of folks like Nuendo/Cubase, the new Cubase looks great. The new Digital Performer also looks great, Etc. If my needs were different I'd still be using PARIS - it does a lot, just falls short with MIDI and has a few other limitations, but within those limitations it's a very usable system.

Cheers,  
-Jamie

 >> Jamie My Logic Audio Buddy..An even better example of the level of audio editing,  
 look and feel that Logic shouold be heading towards. Well, it looks like  
 Apple is heading there without them.

I heard a rumor that most of the German(emagic)team is not leading the Logic  
 Audio development team. That it's all Apple developers? Is this true?

[http://www.apple.com/finalcutstudio/quicktours/?quicktours/audio/qt\\_stpro\\_2\\_restoration](http://www.apple.com/finalcutstudio/quicktours/?quicktours/audio/qt_stpro_2_restoration)

>Using Cubase SX as a standalone FX processor for Paris only:

```

I set the latency in my RME control panel to 1024 so I could add send VST FX to Paris auxes without having too much latency (predelay) in a reverb while not stressing the Cubase VST engine to the point of getting dropouts during processing when using my dualcore 4400 CPU on lots of tracks being processed thru Paris inserts.

InCubase SX, create a mono input and output bus  
 Add a mono track and assign this bus to the input and output  
 Patch a Paris ADAT I/O to an RME ADAT I/O  
 Add an audio track to a Paris channel and set up an external insert on this track  
 Route the Paris ADAT I/O that is interfacing with the RME I/O to the inserts on that channel in the virtual patchbay.  
 In Cubase SX, enable monitoring with FX on the audio channel you will be using to process the Paris track  
 Insert a UAD-1 plugin on the Cubase audio channel and enable it for processing.  
 Slide the Paris audio track back (to the left) by 50ms and hit play  
 The track will be looped through the Cubase audio channel and the UAD-1 processor without audible flammings/phasing  
 Add another UAD-1 plugin to the Cubase insert rack on this channel and slide the Paris track back another 50 ms  
 The Paris track should still play back without flammings/phasing and now it is being processed by two plugins.

Basically, what I *\*think\** I've found here is a way to compensate Paris tracks by a known (and small-50ms) increment *\*per UAD-1 plugin\** without having to chase it around with Sampleslide while giving Cubase SX enough buffer to keep from choking down while processing audio in real time as a standalone processor.

Increasing the buffers in SX results in more latency *\*per plugin\**.....and inversely, decreasing the buffers results in less. For my particular rig/CPU capabilities, 1024 seems to be the magic number for

achieving a very simple means of latency compensation using Paris and UAD-1 plugins without having to stream all tracks in a project from Cubase to Paris in order to process them with VST plugins with zero latency in Paris. Doing this is very time consuming and mixing on two DAWs, even with the incredible flexibility, it just such a hassle sometimes that I just sit there and look at it and don't want to go there sometimes. Another cool thing is, so far, my testing shows that Drumagog is exhibiting the same latency in Cubase SX as the UAD-1 plugins. This \*may\* be indicative of a \*set latency increment\* that may apply to all VST plugins. That may not be such a big deal since Paris handles VST plugins pretty easily, but I'm running Win ME on my Paris rig and some more recent VST plugins only run on XP. This gives me a means of using these plugs in Paris with a known (and simple) latency increment to work with.

I have processed a kick drum with Drumagog in the first Cubase insert, the Neve 1073 in the second one and the Fairchild in the third one and sliding the Paris track 3 x 50ms. No audible flanging when running a parallel copy of the track unprocessed.

Also, a very generous Parisite offered to loan me 3 x EDS cards and an IF 442 today and another smart Parisite may have just come up with a solution to getting multiple ADAT cards happening reliably with multiple MECs so me and Igor are gonna' be in the lab next weekend with the beakers bubbling.

;o)OK.....this is cool. It appears that by lowering my buffers in my RME control panel from 1024 to 512, the latency in increments in Paris can be adjusted in 25ms increments per plugin rather than 50ms. Makes sense, but I sometimes don't expect things to make sense with Paris and it's screwy millisecond increments so this is a welcome revelation. I'm just using my ears at this point, not doing any actual bounces in order to achieve \*exact\* sample accuracy between tracks, but if I'm close enough that I don't hear any flanging/phasing, then I'm happy so far. I'm going to have to try this on a project with heavy track count to see if things start sounding sloppy though. My 4400 x 2 dual core is handling these chores nicely in Cubase at 512ms latency. That seems to be the break point on my system. I'll be getting my head around exactly how I want to configure Cubase sends with Paris auxes in this particular working scenario tomorrow.

Not quite true. There is always room for improvement and I listed a couple of things. Over the years I've had some major criticisms. However, I don't mind sharing that things in Logic-land have gotten significantly brighter recently, it's not the bleakness you think, I think.

However, to answer your question

There are always wishlists for every version of every program. You could

find discussions like this about ProTools, Nuendo, Cubase, etc. There's more such discussion about Logic at [OSXAudio.com](http://OSXAudio.com). This is OK. From wishes come good things.

> The overwhelmingly want is a sleek plaining field that's not clunky, and more  
> like Pro Tools and Nuendo. How about some of the slick right-mouse clicking  
> features found in Nuendo? Not to mention all of it's menu driven editing..Logic  
> audio is not in this leauge at all. When they should be.

I don't use Nuendo so if you could be specific maybe I can help you find out if the features you want have been added.

It even looks like some of those cats want Pro-Tools to be more like Nuendo, which just goes to show that there is no perfect product. Logic is not alone in having room to improve, and not alone in being pretty capable as is, for that matter.

In the Arrange window, right clicking in Logic lets you select different editing tools from a popup iconic menu.

There are some places where a long click is still used and right clicking should be substituted in a future upgrade, for example, to assign an audio channel. But that's a minor nit.

Some of those cats are complaining about take management...I manage multiple takes by having them all on different instances of the same track. This is automatic if you record in loop mode. So comping is not difficult, it's similar to Free Form in PARIS. What else am I missing?

> But, as long as Logic & DP Continue down their Midi first/Audio secondary  
> mind-set, then both will continue to lose market share. Both Apps new complete

The audio features I need exist in Logic. I'm sure more refinement could be done that would wow me, but at the same time I don't see huge gaping holes in the current feature set.

I do similar kinds of editing in Logic now that I used to do in PARIS. I do similar Free Form style recording without needing an exclusive mode for it. I do similar crossfade editing, trimming, etc. All very fast. Some of this functionality is new from updates over the last couple of years so maybe you haven't had the chance to experience it.

> re-write from scratch. I thought I never say this but, Apple should scrap

Or just buy Nuendo if you prefer its feature set. Why not? Choice is good. :^)

> Just to clarify. You ask what I don't like about Logic? The answers can be  
> found in SoundTrack Pro sleek modern, but powerful audio editing. If Apple  
> decides to join Final cut and Sountrack together, and start phasing out Logic(Vintage)7.x,  
> then that along would increase market excitement ten-fold.

I disagree. I have SoundTrack Pro. For composing and recording music tracks I prefer Logic. Have you used SoundTrack Pro or the CURRENT version of Logic?

I'm sure there could be some useful cross-pollenization opportunities, heck Soundtrack is probably based on Logic, but it would be foolish to kill off Logic's deep feature set in favor of the features of a program intended as the audio-for-video sweetening partner for Final Cut Pro.

> But, to keep applying band-aids for an antiquated, but powerful midi-audio

> machines, but not everyone..

If you mean a dedicated MIDI sequencing machine, I don't have a dedicated sequencing machine. A single computer running one program for audio, MIDI and soft synths is a great setup. In that way Logic simplifies my life. Heck, even DJ is starting to dream of simplifying.

Mind you I didn't used to praise Logic so much. I call 'em as I see 'em and Logic has had some significant bugs in the past. But it has also progressed in major ways. Having been there for the progression I can appreciate where it is, finally, today. I'm trying really hard to understand why I should hate it now. :^)

> choke everytime we tried doing something like that..

Macs from the last several years (G5 or Intel) do not choke on large

projects with Logic.

- > Now, with Intel dual cores)Logic can run some serious amount of plugins.Hummm..
- > Even Quad G5 can't run with Intel Macs.. Mac Hype all the way to PC land..
- > My point, Pc's have always ran Logic better than nay Mac. I should know,
- > I run both..

As far as Logic is concerned, my several year old dual 2.5GHZ G5 is plenty fast. My previous G4 wasn't bad but I had to freeze tracks to keep it in the game (nice feature, that).

- > Same with Mac OSX..Nice OS, but very very Bloated. More bloated than WinXP.
- > To me and others, Windows outperforms OSX on most DAWS..Especially Pro-Tools..It's
- > not even a funny.

Heh. No problem, you like MSWindows so enjoy. To each their own bloat. ;^)

Logic is pretty optimized for OSX at this point. Too bad we don't live close or I'd give you a demo and you could tell me all the things this system can't do, while it's doing them. :^)

- > Now that we are all running PCs (Intels & Amds), we can all have the great
- > performance that only Steve JObs promised us. "(:)

Man, ol' Steve really bit it with the 3GHZ prediction for the G5 when IBM didn't deliver. And then he took a u-turn with Intel to keep the hardware speed up, a risky move. But Apple pulled it off. Now that new Macs are all Intel, we can compare on the basis of software performance and design.

BTW I was not thrilled with the switch to Intel. But it looks like it will pay off on the laptop side. On the desktop side I think this G5 system has a few years of life in it yet, at least for music production. For animation, I might be tempted by an 8 core system next year...

Cheers,

>Welllll.....it gets even wierder and it appears to be an issue with Cubase  
SX. The latency of the individual plugins seems to change at random after  
adding another one in a channel. Closing the project and re-opening it puts  
the latency back where it should go, sorta', but the more plugins you add,  
the less accurate the Paris fixed increments become so the Cubase fixed  
increments appear to be shifting more drastically as more plugins are  
added.....at least at lower buffer settings. I sorta' halfway expected  
this and may go back to the larger and seemingly more stable 1024 buffer  
settings. Chasing latency increments around like this is no better than just  
using the UAD-1 cards in Paris and chasing Sampleslide around.

Well.....back to the lab.

;o)

will spend tens of thousands on video, but not a dime on audio. They have  
Soundtrack "Pro", which automatically replaces an actual audio pro as soon  
as it is launched! (Thanks to ProTools, any program carrying the "pro"  
moniker automatically imparts professional skills on any unsuspecting user.  
;-)

Logic is a great program. So are DP, Nuendo, SX, Sonar, and  
Samplitude/Sequoia (despite the lack of dual core support, still). Even PT  
isn't bad for a generic or educational DAW. ;-) I would actually hate to  
see any of them die off - it wouldn't bode well for the industry as a whole.

The biggest threat DAWs face isn't one another, but technology... making  
what we do for a living a simple click of a button accessible to anyone age  
5 to 95.

John,

Try Hotel California. I think there are between 11 and 13 different  
guitar parts/sounds on that by the end but no clutter. =20

Tom

"John" <no@no.com> wrote in message news:451de55b\$1@linux...

Here's a couple more:

Rolling Stones: It's only rock and roll

acoustic 10 o'clock electric 1 right rhythm  
electric 2 right lead

electric 3 left electric 4 right

5 freaking guitars !!

Neil Young.....Old Man

Guitar panned 90% left  
Vocal center, more verb in right  
Bass center  
Piano center very quiet

banjo comes in left  
slide guitar with nice reverb center mono

Stereo vocal harmonies

Share your own !! Thanks

-----=\_NextPart\_000\_0070\_01C6E506.B573AFA0--Hey LaMont! Your comparing a G4 500 MHz

machine up against a 2.8 GHz PC???

That's not a fair comparison, the G4 500 MHz is almost 8 years old, try 1999!!! Why don't you compare it to a PC from 1999!!!, then tell us how Macs suck and how Steve Jobs is a big liar about performance. That machine will stand up to a 1GHz pentium III or standard 1 GHz P 4 and beat them.

You can buy G4 500 on ebay for under \$100.00 all day long. It's not a fair comparison.

>Hi All,

It has been some time since I visited the PARIS community, but am still happily using it (or unhappily sometimes if I try to insert silence in an audio file and it crashes!)

Anyway, I write this post purely for the intention of doing some shameless plugging of my entry in the Real World studios remix competition of Peter Gabriel's 'Shock the monkey'.

This was created/mixed exclusively in PARIS in one 8 hour session (time isn't plentiful when you're a househusband). If anyone would like to hear my efforts, please visit the link below:

[http://www.realworldremixed.com/remix.php?remix\\_id=0DAEEKGJt P4D-I\\_x](http://www.realworldremixed.com/remix.php?remix_id=0DAEEKGJt P4D-I_x)

If you feel inclined and consider it worthy please feel free to rate/add my mix to your top 10 - (that's the real shameless bit) - you do need to sign up (it is free and they don't spam you) to do that though.

Regards,

Nic Grant Oh gosh - I see this has already been covered - ah well - should have done a search first - I'll check out the other PARIS mixes then.

Nic. Hi Dedric,

From what I've found out so far.

Samplitude/Sequoia 9 now support 4 CPU finally. Of course Dual CPUs have been common for 4/5 years and dual cores for 2 years. Better late than never :)

Cubase4/ Nuendo 3 = 8 Cores/CPU's

Sonar 5/6 = 4 cpus

Ableton Live 6 = 2cpus

PT 7.1 LE = 2 cpus

Vegas 7 = 4 cpus

Wavelab = 2 cpus

audition = ummm i think only one still

Acid "Pro" = still 1 but I think next version to match V7 will be multi/

Pro tools is last thing I would consider if I had a tight school budget . :)

The audio market is very fast with support for current technology and formats and is very responsive to customers about adding them. The video market is quite the opposite. Most of the video companies still haven't figured out that a sound blaster isn't "Pro".

Chris Ludwig  
ADK

chrisl@adkproaudio.com <mailto:chrisl@adkproaudio.com>  
www.adkproaudio.com <http://www.adkproaudio.com/>  
(859) 635-5762I was checking out this site:  
[http://opencroquet.org/about\\_croquet/faqs.html](http://opencroquet.org/about_croquet/faqs.html)  
and found this observation: (This quote came from a section of a FAQ that  
was talking specifically about GUI's.)

"The emergence of software monopolies removed any encouragement to innovate  
on the platform (interface). Compare a modern PC of 2004 to the first  
Macintosh shipping in 1984 and the major difference you will see is color."

I had to laugh when I read it. Sure, there are lots of added/new features  
on the Mac or Window's GUIs, but the basic design concept remains the same.  
Pretty amazing when you consider the high tech wizardry of the past twenty  
years.

By the way, if you haven't checked this site out: <http://www.metafilter.com/>  
you might do so. It's become part of my daily internet tour.

Rock on.

MRHey Nic,

Very cool. Great concept -you really turned the original on its head. I'm  
afraid I wasn't able to give it the best listen as my computer speakers are  
pretty lame. But, despite this, you can hear that warm "Paris sound." I  
was noticing the same thing on Kim's tunes. So much of what I'm hearing on  
the radio, or on new CD's, sounds like the crispy edges of over-fried eggs.

Cheers,

MR

>My main audio computer needs to be replaced....I am looking to put together  
a new PC that will be for Paris and also a native platform that I will ultimately  
migrate to - but not right away. (Leaning towards Samplitude) My Paris system  
is 2 cards, with 1 UAD card.

I have a budget of about \$1500.00. What I have come up with myself is  
an AMD dualcore 2.6 - 3 pci slots and 3 pcie slots - honkin' power supply  
- 7200 rpm SATA main system drive with a 3 removable SATA drive bay for audio.

2 Gigs of RAM.

I know Paris can't make use of it....but should I be looking at dual processors?  
Would this send my budget through the roof?

Any specific motherboard/processor recommendations?

Someone want to point me to the ideal system for my budget and needs? Thanks for the info Kim.  
I went and got the driver.

I noticed that most of these cards come with the analog splitter cable.  
Only the PCI-e version seems to come standard with the DVI. Without the  
DVI I can't see how it's better than my Matrox G450 (for PARIS). I'll keep  
looking.

Thanks,

Rich

>Phil,

I'm in the same boat as you. I've been looking at the Gigabyte K8NS ultra 939 which

has 5 PCI 2.2 slots and which is know to work very well with PARIS,but there becoming hard to find. Ideally I'd like a Intel based board with 3 PCI 2.2 slots

and PCI-e slots. This will be my first PC so I'm flying blind. I'd like to run

Pro Tools le,Ableton Live and Reasons as well as PARIS. I've been looking at

ASUS P5B Motherboard,don't know if this is a good choice,but I'm going to some

checking around. Let me know what you come up with. Don't like the idea of being

beta tester but I my have to.

respect

Oh great, now I'm going to have nightmares! ;^)

It will be interesting to see what refinements end up in future versions of Logic. I'm personally glad it's already come so far, and is now not only feature-rich but much more reliable. The hardware and OS it runs on is plenty fast and reasonably elegant.

I'm glad we have choices, too. For anyone who wants Nuendo, Pro Tools or is limited to running on MSWindows, clearly you should not buy Logic. Apple will be OK without your money.

Of course it would be great if Logic were multi-platform but the reality is that ain't gonna happen.

Cheers,

-Jamie

>Hello deej,

I had tried SX, and i'm waiting my first Prais rig to be shipped across ocean...

so i'm interested by your experiences.

At this point, did you simply tried to make your whole mixes in SX ? I suppose you did it, and decided to go on with Paris.

As you are in an experimental mood, i'm curious too about the internal signal processing in SX : did you tried to null files going back from cubase (no processing in SX) with the originals tracks in Paris ? i'would bet they are different, but maybe not in an audible way.

the internal Logic team, some people came from Opcode. I think Logic will  
now improve. "

And Roland & Former Sonic Foundry Developers. Hence, SounTrack(Opcode vision sleekness), apple loops(Acid), guitar sim(Roland Cosm\_.. Now, that's a winning combination. I'm loving Apple's diversity in getting the "best" people from different Audio manufacturers, then developing a Killer Post/DAW .. :) Now, they have Apogee, Final Cut Pro, they have the Machines Dual Cores Macs.

Nothing should prevent them (Apple) from becoming the pre-eminent DAW player, thus overtaking Digidesign..
