ration of folks out there now who have likely never
heard, or at least apid attention to a vinyl recording and who have been
listening to *the industry standard* since *the industry standard* became
entrenched about 10 years ago. I agree that it's a matter of
comfort/familiarity with digital sounding recordings, just like vinyl and

tape seems familiar to us. Radio is so compressed and sounds so awful these days that playing digitized old vinyl recordings really makes them sound a lot worse than the newer digital recordings so there's not even close to a level

d more important
it is the sound he likes! Yikes!! Compressed to a dynamic range of about 10db and very little sense of depth, space or stereo width.

Music may be universal but we all know it comes with cultural bias. How many American teens would choose to listen to a steady diet of microtonal music? Might as well serve up a big plate of Haggis... And it not just teens. Labels work the exact same way. If someone has a hit record that sounds crappy, all the labels want the same crappy sound.

Suddenly I am feeling very old. Fashions change taste changes but I thought good sound was forever. Perhaps not so. As a producer who still has at least one toe in the current market, I need to have some awareness of the realities of the market and the "new sound" is the new sound.

My personal taste has not changed. For most projects that I foresee myself working on, I will continue to use Paris, but just as I have made decisions in the past to use SSL consoles rather than Neves to achieve a more trendy "Pop" mix, I am now experimenting with ways to capture the "elusive PT sound". (Insert appropriate emoticon).

Luckily it was reasonably easy to achieve. I recently purchased the Waves SSL bundle and running that in Logic can get me very close to the sound of better

that sounds crappy,
>all the labels want the same crappy sound.

Someone said to me years ago about the industry: "if the wrong guy stopped short on Hollywood, 50,000 noses are gonna go right up a lot of behinds"

So bugger 'em. I say go your own way. Have a sound all your own and make them play catch-up.

>Suddenly I am feeling very old. Fashions change taste changes but I thought
>good sound was forever. Perhaps not so. As a producer who still has at least

WE make the damn market. Following trends leaves you always behind.

>My personal taste has not changed. For most projects that I foresee myself

And there's nothing wrong with it. Yet you will still have clients where great sound will rock their world.

>day we will once again be "in".

Bingo.

Best wishes,
