Seems more than reasonable to me

;-)

DonMy os drive had the cacheing turned on and my audio had it off. I have them
both off now and had paris record 16 channels for 1.5 hours straight in xp
last night with NO crashes. This might be good!

Thanks,
John

Boot 'er up & look around in there under either "integrated
peripherals" or you might also have a section that
says "frequency/voltage control", where you can set CPU, PCI,
and USB votages by percentages, + or -.

>Dave - glad the new rig is working well for you. Best of luck with it!

Steve,

I believe most of us have been under the assumption that all past and present Paris users are welcome here regardless of what we use now (or so I hope), unless Kim says the server has decided otherwise. I'm not a ProTools fan, but if I were considering an HD rig, I would take the feedback of a former Paris user over the Digi forum any day. For those considering ProTools I would think Dave's post would likely be of interest.

I don't participate a whole lot, but I consider this forum to be the last refuge for Paris users (former and present) that found it to be more professional and friendly than any other forum on the planet, and a nice way to stay in touch with Paris users we've come to know and even meet in person. I try to stay out of Paris-subject threads for sake of bandwidth and keep my participation short and simple, helping if I can - to allow current Paris users to read or pass along the info they need, but if you guys find non-Paris user participation to be distracting, I'll respect that and stop posting. No offense taken - I'm just reading into your post that maybe there are newer Paris users, or other participants that prefer this to be a Paris users-only forum. If so, you have that right.

I've been under the assumption that past Paris users are still welcome, but if that isn't the case, please feel free to say so.

Regards,
Dedric

>Dedric,
You are most welcome to hang around this forum. Many of us use Multi-DAW's.
I still use Paris,but I also use Neundo, PT HD & M-Powered.

This site has always welcome insightful DAW discussions. You have been as "asset" to this forum and I'd hope that you continue to post here and share your thoughts and finds with Nuendo and other gear.

Take care,

LaMont

>yep. I have both cards 0404 and the 1212M. The 1212M has more clarity and definition. This not to say that the 0404 is bad sounding, it's not. Teh 0404 (to me) is the best sounding \$100.00 card on the market and can out perform many \$1k cards.

P.S.

I just had a conversation with E-Mu support. I called to see if I could purchase the new 1616M dock, due to it's new mic pres with built-in soft limit. Here's the rspnse:

"Dear Mr. Davis,

After speaking with our test lab department, I've found that the 1010 card with the 1212M and the 1010 card with the 1616 PCI have design differences that will not allow the 1616 Dock to function on the 1010 card from the 1212M.

The 1616PCI uses a new 1010 card that has different electronics and no power cable, because the 1616 docks use a 48V wall wort whereas the 1820M was powered via the EDI cable. Also, when the dock is attached SPDIF/ADAT on the 1010 will be disabled.

I hope this information will assist you in determining what else to add to your rig. Please don't hesitate to contact us again if there's anything else we can do to assist."

I was also told by the Support Rep that they are agreeesively testing and implementing "Multi-Card capabilities. The holkd up is that E-MU has to re-write the mixer application.

Anyway, even PT's guys/gals are welcome, especially Dedric!

Contributing in some positive way is always a big plus, and he does.

DCThis sort of thing is definitely NOT appropriate for this particular forum.
I feel I have the entire newsgroup behind me on this one.

JohnI've got Melodyne 3 and it's by far the best pitch / time correction
software I've used. I've never had good results with PARIS - like Kim says,
a snare drum turns into a fart, in fact all pitch shifting I've done in
PARIS sounds like a fart. Melodyne beats AutoTune hands down, and I've
found it better than the MPEX algorithm used in Nuendo.

Stewart.

>Hey Dedric!!

Here's what I got from E-MU..

Dear Mr. Davis,

After speaking with our test lab department, I've found that the 1010 card with the 1212M and the 1010 card with the 1616 PCI have design differences that will not allow the 1616 Dock to function on the 1010 card from the 1212M.

The 1616PCI uses a new 1010 card that has different electronics and no power cable, because the 1616 docks use a 48V wall wort whereas the 1820M was powered

via the EDI cable. Also, when the dock is attached SPDIF/ADAT on the 1010 will be disabled.

I hope this information will assist you in determining what else to add to your rig. Please don't hesitate to contact us again if there's anything else we can do to assist.

I asked about "multi card" capabilities. He stated that they are working on it and the only hold back is that they have rewrite the Mixer software to accomodate multicards..So, stay tuned :)

But there is allot more to making a good
sounding AD/DA then just the converter chips used. For the money EMU has
done a great job on the hardware design of their converters but hey when
you have the buying power of Creative Labs behind you then I would
think so. The only things I don't like about the EMU stuff is the mixer
applet. It's way to convoluted for such a simple card. Also the lack of
larger I/O cards but sense they are marketing the stuff mostly to a home
enthusiast market it makes sense why they don't.

I agree that yes the RME Digi-968 card designed over 8 years ago by RME
does not sound as good as the higher-end EMU cards. They don't to me
sound as good as the newer RME converters on the Fireface, Multiface and
their stand alone converters.

Tom,

The LA-2A is a very *sweet* compressor with a definite sonic signature. =
It does some wonderful things for fingerpicked acoustic instruments and =
for certain vocalists. The oft lauded *7-2-5-7* settings for the =
Empirical Labs Distressor which are so popular for acoustic guitar are =
extremely close to the LA-2A response curve.=20

-----=_NextPart_000_005F_01C65D57.17E417C0--There's a 1212M refurb on EBay right now for
\$159.00 and an Emulator X
add-on for \$115.00. I'm tempted, but this hardware just doesn't have the I/O
options that I need.

>Dear Tom,

I was trying it on a snare...

I believe that the 0 release is a new way of using that eds compressor.

I am now very satisfied with the results I get changing the lookahead (try 0 lookahead for great punch) the ratio from 1.15 to 1.40 and then the attack to achieve any desired sttings...

Regards,

Dimitrios

>Hey Paul,
There was no swinging intended. None. How does my post help the group? Well,
it doesn't... Scan the posts... The way I understood it, it was ok to chit
chat, and I should grow some thicker skin. Well I did and my question was
to Dave. Just wondering where he's coming from.
Dave honestly, no swinging intended. I want to ask Dave. Dave, did I offend
you? My appologies.

Paul was it you that told me to get thicker skin before?

"Fred" <fred@reborn.com> wrote in message news:443bf3e5\$1@linux...
>

> Is paris spdif coax or optical?

> TIAHey Steve has a good point, this is the Paris news group, not that other people
aren't welcome! Both guys are entitled to their opinion. I think all should
be welcome.

For some time there has been a migration away from Paris by former Paris
users. Some people have tried to justify their own choice by saying things
like the waters are safe in PT land, or PT sounds better than Paris. It
is discouraging to paris users, and kind of trolling. Some PT users have
actually come here in the past just to troll, and it didn't help our group
much. It is psychological, it makes you feel like your missing out, or your
getting left behind. When BT left, a lot of people went with him so to speak.
For the others that are going to switch, if you got to go, Ok, but don't

drag people away with you by knocking Paris. We need to encourage people to stick around. This NG is shrinking!

I remember very well a certain somebody, who I will leave unnamed;) raved about Nuendo for months on end. Now that certain somebody is not so sure that Nuendo is better sounding than Paris! ;) A couple of guys here that thought Nuendo was the answer to Paris are now questioning Nuendo. Some times other stuff just sounds different, and initially perceived as being better. Of course Paris was left behind feature wise, and some people love the whiz-bang of all that. Others prefer the capabilities and the working methods of newer software. There will always be something to come out that will be more slick than Paris. Paris is still pretty slick and very useable. When combined with a second DAW for effect processing, Paris becomes very hard to beat.

Many Paris commercial studio owners have expressed that they have, or are considering going with PT because it's "The industry standard". Many feel that if they don't jump to PT that they are losing business. For some people this is the case, and they need to do what they need to do. However, it really should be based on the quality of the end result, not the equipment you use.

Everybody has different needs. For most project studios, there is really no need for an expensive system like PT, or 2K for Nuendo, plus the cost of hardware. If your in a major market like N.Y., L.A., Nashville, or Austin, then PT makes sense. For myself, I'm more in to recording live instruments, so Paris works fine and sounds great. The day a record company wants to give me a million dollars to record an album and insist on a SSL 9000 and a PT system, I'll buy them. When it comes to making a record, and your talking sound quality, Paris can stand toe to toe with any DAW in the world. There have been some pretty big records done on Paris, just ask BT. By the way, he still mixes with Paris!

Opinions are Ok, but I feel that post about PT that are in effect saying that PT is better than Paris, are not all that helpful to Paris users.

>Hey Chris,

I have not hear the new RME stuff. I would hope that their interfaces got
upgraded in the sound dept. Another card with mentioning is the M-Audio Audiophile
192. This cards converters are in aanother league form their (m-Audios) previous
offerings.

Also, like I stated in another post, E-Muis working on updating their Mixer

app to accommodate multi card usage.

I wanted to use the extra card just so that I would be able to add more
to the global inserts - does golbal use card A DSP or? Anyone have any other
idea's. Also if you have a cable you want to move let me know?If I ever get PT I'll be here telling
everyone how good or lousy it is and

it WILL help paris users decide to keep paris or move on. That's great help

!

You are an incredible individual. I agree with everything you said. Spoken like a true gentleman. Especially the part about past/present users regardless of what they use now. I call them "old pro's". as Dave is. My issue wasn't about who should or shouldn't be on the forum, mercy no!!!!Actually I didn't have much of an issue at all till everyone but Dave responded. I just wanted to know where he was coming from in regard to posting Pro Tools being better than Paris on a Paris users group sight. He wasn't rude or nothing and I wasn't trying to be either. Dedric, you have a very eloquent way of putting things. I hope they consider you also an asset to the group. I don't feel I spoke out of line, but if I did?, sorry Dave...

Dimitrios,

I figured it wasn't vocals when you used the term punchy.

I do like the La2a also on Kk & snr combined with unprocessed
tracks.

I'll give these new settings a try. Thanks!

Tom

"Dimitrios" <musurgio@otenet.gr> wrote in message =
news:443bea15\$1@linux...

Dear Tom,

I was trying it on a snare...

I believe that the 0 release is a new way of using that eds =
compressor.

I am now very satisfied with the results I get changing the lookahead =
(try

0 lookahead for great punch) the ratio from 1.15 to 1.40 and then the =
attack

to achieve any desired sttings...

Regards,

Dimitrios
