Yes This is the most important one. Especially for ASIO based sound cards.

- > Visual Effects for best performance

Yep Frees up some ram and can make older video cards perform better

- > Switch Off Desktop Background Image

na unless your background is a huge BMP that takes lots of ram

- > Disable Screen Saver

yep

- > Disable Fast User Switching

yes save a bunch of ram if you use multiple accts.

- > Switch Off Power Schemes

Yes

- > Switch Off Hibernation

Yes

- > Disable System Sounds

Oh yes .. nothing like having a windows beep reset your sample rate to 22k while your recording

> Do Not Map Through Soundcard

No point in doing this unless you are trying to trouble shoot something.

> Disable System Restore

Yes but I wouldn;t do it till after you install all your drivers software etc and your are sure the system is running well. Then it is OK. At that point make a drive image of the system and put it in safe place!!!

\

> Disable Automatic Updates

Yes. BUt don't disable the service just turn it off in the control panel.

Yep. I turn them all off. Burn in isnt ans issue on LCDs just CRTs.

> Drives off to NEVER

yep as stated above

> Disable the Computer Browser in Services to improve mapped drive browsing.

Don't bother. This would only be an issue if you had large network folder shares. Pretty rare in an audio setup.

> Disable your network card by right clicking on the nic icon

If you really want to have it not be there. The install the drivers as

normal then disable it in the BIOS. Disabling it in windows does not prevent it from using memory/IRQ and power resources.

> Defrag regularly

You shouldn't defrag your audio drives. You only should do your system drive and only if it says you need too.

> Keep your desktop clean

I guess but thats never worked for me

> No wallpapers

ONLY if you want to save a couple of megs of ram

> Set video to highest color depth

Yes 32 bit is the native resolution of all current video s cards and they will all work better at the setting.

> Increase your IRQ priority

Maybe on a really old motherboard

> Disable Power Management

yep

> Set graphic acceleration to full

Hell yes. I don;t want the CPU to do the work of the video card.

> Disable background applications

Thats kind of a gray area but yes I guess all only essential ones.

> Disable USB

see above

> Graphical window settings

I assume you mean visual performance setting. If so then see above.

> Disable NTFS Last Access Time Logging (NTFS Only)

already covered

> Make sure DMA mode is enabled on drives

Should only be an issue on older motherboards or older chipset drivers.
Haven't seen this as an issue in couple of years.

>

> Restart your machine at this point in time. When you come back the first

If you want too. Don't think it will make a difference.

ecked.

- > Disable Remote Assistance

Doesn't matter but it won't hurt. I use it all the time on my machines at home and if I need stuff from work. It's a great thing to use if you have a old system or laptop and want to remotely control your DAW such as in a vocal booth.

> Fixed Swap File (Virtual Memory)

Yep. I usually set it to 1536 min/max for up to 1gig or ram and 2048 for 2 gig and above. Never saw and change in the system past that other than hard drive space being used.

> Speed up Menus

I guess. Personally I think they fats enough ...)

> Disable Offline Files

I will save some disk space if you are on th internet allot.

> Disable Remote Desktop

Same as remote assistance

> Disable Internet Synchronise Time

If your not on the Internet then yes.

> Disable Hide Inactive Icons

Yes. Some important icons can't been seen with it on.

> Disable Automatic Desktop Cleanup Wizard

Yes. It's annoying.

> Disable NTFS Last Access Time Logging (NTFS Only)

Yes. But it has a very minor and probably unnoticeable on current systems.

> Disable Notification Area Balloon Tips

Nah unless you have a very slow machine and/or video card.

> Disable CDROM Autoplay

Hasn't ever been an issue for me in XP It might effect things on slower machines.

> Disable Disc Indexing

Yes.

>

> -----

> Additional tips

> -----

>

> 2 audio Partitions

Seems like waste of space and time sense you will always be moving stuff around the time. The newer 16 meg cache drives start at 52 megs or so and slow down to maybe 40 near the end of the drive so I don't see being a big deal. Older drives may benefit from it.

> Use NTFS drives with 64k clusters

Yes. It does seem to help with streaming large file chunks.

DON'T do this to the system drive if you are using a 3rd party format utility. Only do it on audio drives.

> In BIOS disable USB, LPT1, Serial port

The LPT and serial ports I could see. I need USB so not an option. Some older Intel and AMD motherboards did have issues with USB chip sets but I'm talking like 4/5 years ago. If your not using the USB you might you might as well disable it. EDS cards don't share IRQ DMA resources as well as more current devices so they might work better with no USB. My machine has 2 UADS 1 Powercore (old one) , and a Fireface. Every slot shares with some USB sense there are 8 USB ports. No problems.

> Remove Messenger

Other than saving maybe 10 megs of hard drive space. If it is running just go into it's options at set it not to start up at boot and it is of no concern.

UNder SP2 Messenger is already set to not start on boot.

> Classic Mode

If you mean the windows classic theme then don't bother since you already set visual setting to best performance which is basically windows classic.

> Classic Start Menu

If you don't like the navigation of the current one then yes.

> Power Schemes: you can have the monitor turn off but set Turn Hard

I used to teach recording in a university music dept. Oh yeah, things
have changed. Apple donated a whole slew of DAW's and notation
apps and lots of other stuff. Even trumpet players have to learn
how to use them.

Things have changed quite a bit, but some things remain the same.

It was most interesting though to see Claude bringing back
techniques that had been mostly lost, so sometimes things can
come from unexpected directions as well.

>Why is the idea of meaning lacking in musicians now? You're losing me here.

Well, I think you are aware of the absurdist bent in many
contemporary bands. As a matter of fact, I think you actually
participate in it, don't you?

Nothing wrong with it, we had Captain Beefheart years ago too,
but the very idea of music being a positive social force is pretty
laughable to most of us now, wouldn't you agree?

Certainly there are many musicians with a strong message, but
it is getting harder and harder to get the message through the
merchandizing. Sometimes, to paraphrase McLuhan, the celebrity
is the message. Or the boobs, or the booty, or the gangster image,
or the naughty bits, or even the cynical humor.

>OK, I have it now. For music to have "meaning" it has to have a social agenda
and be "positive" and make the world better and so on. And the
increasing commodification/globalization/star-systemization
of music means that is less possible, etc etc. Using those presuppositions
(which I don't) you're right, so it's clear now.

>> Disable Disc Indexing

>> Indexing Service is a service that extracts the information from a set of documents and organizes it in a way that makes it quick and easy to access that information through the Windows XP Search function, the Indexing Service query form, or a Web browser.

>>

>> This information can include text from within a document, (its contents), and the characteristics and parameters of the document, (its properties), such as the author's name. Once the index is created, you can search, or query the index for documents that contain key words, phrases, or properties.

>>

>>

>> -----

>> Additional tips Descriptions

>> -----

>>

>> Partitioning. A useful tip when configuring your audio disc, is to split this into two partitions. Set up a smaller "audio scratch" partition - say 6GB of a 30GB hard disc. This partition will be used for the songs that you are currently working on. The benefit of a smaller partition is obviously quicker defragmentation. If you use the entire 30GB as one partition, then this will take ages to defragment. When you are finished with a song, transfer the audio files to the non-scratch partition, where disc I/O performance isn't so critical.

>>
