hi joey-

your EDS card: is that the EDS1000, with daughter card? and all in perfect working order? any problem with the ethernet connector? includes cable for linking multiple EDS cards together? can you give me some idea of how, or how much, this card was used, and in what type of environment? how old is it?

ANY problems with it at all?

thanks so much---

looking forward to hearing from you---

most sincerely yours,

harry e. Basically, VITC is Vertical Integrated TimeCode, and it is T/C that is incorporated into the Video Stream of the videotape.

We're talking "Pro Videotape" machines here.

It is the eds1000 card, I purchased it about three years ago with version 3. Have never had any problems, less than 75 hours of use, in a non-smoking bedroom studio. Used to track about 8 songs. I sold the other card I had with the crossover cables for connecting to another card, so those are unavailable. Hope this helps. Feel free to email me at joeyl@wgm.us.

thanks
