's 30 degrees C here. Warm, sunny, beautiful (yes Martin, in Melbourne ;o) and no sign of snow...

....but to those having a thanksgiving in the winter, all the best. May your food be as fine as my day. :o)

Cheers,
Kim.

> Does that make sense?

Absolutely - I generally don't fall for psycho acoustics, and closing my eyes and listening proved it. It's either there or it isn't. I was just giving the "Samplitude sounds better" crowd the benefit of the doubt. I also usually don't lend credence to such claims until I hear it for myself, but it can't be "I think it sounds better" - for me it needs to be - "the highs sound smoother for certain, and the lows are more detailed, with

audible A/B examples". That siad, there is value in perception, and if one DAW gives the user a better feeling about the audio, workflow or enjoyment factor, then it's worth considering as a preferred choice.
