r />

John,  
I have 5 cards in a 13 slot Magma with the traditional fan running good and hard. I'm not sure what you mean about the 8 in hardware. What are you saying? =20

You bring to mind that maybe it's an EDS card? I'll try switching in the Group Master and see if the problem goes away. Thanks for that tip.

Tom

Is it possible you have heat issues or power supply issues? Open the = case and throw a fan on it. How many eds cards do you have. What's your = setup?

If you say it works great in win98 that doesn't sound like an 8in = hardware issue.
