So tell me this DJ..
I haven't put much thought into trying to figure out how to do this =
but...
How do you group certain channels into a sub stereo channel?

Example: I want to send the Kick and the Bass to a 3rd channel to =
get compressed/limited together
using a native plugin for the processing, but I want to be able to =
use Paris EQ and Trim on the bass
& kick before they are sent over to the 3rd ch
