There's another jazz club a bit closer to home which I'm hoping will become a bit of a local. The one I went to last night is in the city centre, which is about 15 minutes drive, whereas this other one is in Fitzroy, which is about 5 minutes drive, or an easy ten minute tram ride and short taxi home. Hence I'm hoping, if it's any good, it can become my "jazz local". I haven't been there yet, but I'm hoping to check it out some time next week if I get the chance.

If I get comfy at this other club, the calibre of muso will likely be a little lower, but they

[View Forum Message](#) <> [Reply to Message](#)

should be fairly approachable I imagine. Mind you even at Bennett's Lane (last night) the players were just wandering through the audience, and I could have easily spoken to them.

On the other hand, I spent a couple of hours reading jazz theory earlier today, and, like last time I read jazz theory, I found that I actually am already pretty comfortable with all the basic theory. What I need is to do some more study on the actual great players, and specifics of their styles, so that I know more about the finer details. 90% of the hard work of learning modes and harmonisation is done. I'm starting to think that what I need at this stage is more a history lesson.

I might spend tonight reading I think...

Of course a good teacher would be able to look at my playing style and go "Ahh, what you need to know is THIS!". ;o)

I just haven't really had a music lesson since, well, since I was in High School actually. I'm kinda used to working everything out myself. Mind you, if I found the right person, probably 5 lessons in the right direction could make some pretty big strides. The thing is I would need to find the right teacher.

Cheers,
Kim.

My buddy had never taken lessons before but he found it quite enlightening....particularly voicing of chords, basic theory (which you have) and learning tricks for solos i.e. scales and relative positions etc.

Have fun

DonI have just bought their Aries condenser and believe me or not comparing it to AKG C353EB I hardly notice a difference. Simply top handheld for an incredible price.

Wow!!

Sarah, You are quite the writer/musician. I haven't enjoyed a CD so much in years.
Very original songs and style, great instrumentation, musicianship, production, well honestly, I can't find one thing I don't like about it.
Superb quality. I know you recorded this using Paris but did you record this at a studio? The acoustics sound great.
I hope when you get some time you'll share some of your production notes. Room, mics, pre's, guitars, amps, etc.

Very Nice Job! If you ever play anywhere near North Carolina, please let me know. ;o)

Your newest fan,
PaulOops, spelled Sarahtonin wrong. Duh!
BTW, what kind of bass are you playing?

Kim, the only way I learned how to play jazz was by listening to the =
cats that I really dug and transcribed tons of solos. I practiced as =
many arpeggios as I could find or create with my own musical sense, in =
every key of course, this is a must, learned all the chord scales, in =
triads, sevenths, and 4th patterns, especially the dominant ones, =
(they're more complex and were harder to hear for me), Altered, =
Diminished, Harmonic Minor, Melodic Minor, etc., it's endless my friend. =
It's all repetition in the beginning, but eventually you begin to find =
your own voice and things start to fall into place. It only took me =
about 25 years :0 and I'm still searching and analyzing other's solos. I =
play the sax and recently the steel drum which has made me more aware of =
comping. Keyboard is challenging in that you comp and solo =
simultaneously. If you want to do this on piano, you're on the right =
footing already if you're listening to cat

The Big Knob has nice features and is very convenient, but it does send your signal through an extra amplification stage.

>I do play guitar, though I'm more comfortable on keys, and would be approaching
jazz from the keyboard end, at least as a first port of call.

That said, it's an interesting concept I see at the site. I have a guitarist
mate who's also on a jazz kick so I'll certainly forward this to him.

However, one of the issues I have on guitar, being less familiar with guitar
than keyboard, and partly just due to the nature of the format, is not just
that I don't know where the notes are, but that, on keys, I can easily see
the current chord, and how that fits in to the current key, the previous
chord, etc. I can see it all because Ab looks the same everywhere. I know,
for example, if the note I'm playing currently in my solo is the 5th of the
current chord, for example, or whatever. On guitar, knowing the scale is
one issue, but to be really good you have to also know how those notes fit
in to the current chord, the last chord, the key the tune is based around,
etc. This is a part where it seems easy to me on keys, but on guitar I get
lost, and while these lights will help with which actual notes are in the
scale, I can't see that they will tell me which note fits where in the present
scheme of things, relative to the current chord and key, etc, if that makes
sense. That's still going to require that I know all the inversions of every
chord all up and down the neck. I don't see a way around that.

Good idea though. Very good idea, and a lot could be learned from it.

Cheers,
Kim.

this week's whim for me is that I want to switch all my musical pursuits to jazz. I mean rock is all so yesterday. ;o) =
Actually, it's not a sudden whim for this week. It's been brewing for some time, but I've been avoiding this switch because it sounds like too much work. Part of the problem is that jazz

There are other sites and forums who has nothing but praise for the Mackie
Big K..

I love the unit and I choose it over the Presonus..

> If it has been a long time, it could slip back pretty quickly, but what most pro tuners recommend is having it tuned again in 3-6 months, depending on how old the piano is, and how particular you are about it. It might hold fairly well after a couple of tunings if the strings and hammers are in good shape. Having it tuned every 6 months to 1 year after that should suffice for a home piano, depending on temperature, humidity, etc.

I would have a professional tuner do it. A reputable tuner that works by ear (pitch fork) may give you the best tone. I've used both - an older gentleman that tuned by ear, and a guy that used an electronic tuner. Both did a great job, but the ear-tuned piano seemed to have a little "warmer" tone - it's all about getting the surrounding strings at the right sympathetic resonance.

Another thing you might want to consider is having it voiced too. This usually isn't a lot more when done with a tuning and evens out the hammers' felt. Over time, the felt becomes hard and the piano starts to sound "hard" - some hammers may also be inconsistent. When voicing the tech just softens up the hammers slightly where necessary. It does make a difference if the hammers are in good shape.

Regards,
Dedric

It's also known as AAC - or the format that Apple uses for iTunes if
you so choose.

I ripped my entire cd collection into m4a for casual listening -
sounds pretty good, and lower-bitrate m4a (aac) sounds as good as
higher-bitrate mp3, and take less space.

I only use iTunes for casual listening, and for filling myPod. If I
want to do critical listening, I use the original cd in a real cd
player. So aac serves it's purpose.

pab>What I want to know is, is it like a guitar?

Absolutely!!!!.....just wrap a big bungee cord around it like a capo.

;o)

 What is the latency of the EDS gates with zero lookahead?
 I want to use them on toms on a vey 1980's track, and they really seem to
 kill the fullness of the toms when inserted, even if set not to gate, so
 I figure I am going to need to nudge ala UAD style.

Oh, while I am at it, anyone know the latency of the waves phasor plug, I
 can't recall the name off hand, metaflanger perhaps.

Thanks again! Maybe the motherboard was bad or the power supply was unstable and you had a interruption in the voltage. Do you have another motherboard for a backup? I feel your pain :0

>Thanks guys,

here is where my memory and documentation gets sloppy.

I know wit UAD plugs you nudge 4 times the 100 button but thta is not the
same as 400 times the 1 button,

So I guess I need to know how many MS a 1 button nudge is. (it is not 1 MS)

Also, John, sample slide only nudges backwards. Would be cool to do it the
other way though

>>HI DJ,
REset the CMOS first. YOu Matrox cards have bad video memory more than
likely. I would go pick up a cheap nvidia card and never think about
Matrox again. Before you boot into windows make sure that the date is
set right in the BIOS.

Feel free to give me a call on Monday if you need too.

(859) 635-5762sampleslide only works by delaying, so you nudge backwards in Paris 1ms=80 samples then apply sampleslide at 78. That is 2 samples earlier.

ADK Pro Audio
(859) 635-5762
www.adkproaudio.com
chrisl@adkproaudio.comHey Rich,

I've got a PRO MPA that I bought several years ago and have used successfully on vox and acoustic guitar. Also makes a pretty good bass DI. A nice unit for the \$\$\$.

Mark

"Rich" <studiodog_99@yahoo.com> wrote:

>

>Wanted to get an opinion - reviews, spec's etc. look good... Pop/Rock type

>VTP?? Thanks>But at this point its no worse than what you have now.

ROTFL!!!!.....well that's encouraging! Maybe I should get a
Colorgraphics Predator Pro PCI and pair it with my Matrox P750. Maybe, if
they are equally incompatible with the rest of my system, the the crappiness
will phase cancel, everything will work and I can use 7 x VGA's.

;o)

>Yes, only one. It has three USB 2.0, one Firewire 400, and one Firewire 800.
There is an adapter that plugs in to the FW 800 to give you two more FW
400 connections. You also have the option to use a FW 800 patch bay to add
more connections, and you can always daisy chain Firewire. I believe it's
up to 64 devices per port.

You can also plug in a second monitor for dual display. It will display
more than 4 million pixels on the 30" Apple Cinema HD display.

Here is the stock configuration for the Mac Book Pro 17":

17-inch widescreen display
1680 x 1050 resolution
2.16GHz Intel Core Duo(1)

1GB (single SODIMM) 667MHz DDR2 SDRAM
120GB 5400-rpm Serial ATA hard drive
8x double-layer SuperDrive
ATI Mobility Radeon X1600 with 256MB GDDR3 memory
One FireWire 400, one FireWire 800, and three USB 2.0 ports

MacBook Pro also features a full-size backlit keyboard, Scrolling Trackpad,
AirPort Extreme wireless networking (802.11b/g), Bluetooth 2.0+EDR, ExpressCard/34
slot, dual-link DVI video out, Gigabit Ethernet, and optical digital and
analog audio in/out.

More info at:
technical specifications

I totally disagree with the opinion that Apple is selling a kludge, in fact it's just the opposite. Although, it is my opinion that they are expensive, but you get what you pay for!

I'm trying to help 2 different fellas put together their home studios.
One is a musician who'll be just doing his own stuff and one is a guy
switching from a fostex 1" 16track that he's been demoing small acts
with. They've both got no clue about the computer world - at all - and
digital scares them, so naturally they've been looking at more fostex
stuff, like the 24track rackmount.

I don't think this unit will serve either of them very well and will
take an additional amount of outboard gear to make it work, effectively
cancelling out any savings they'd be getting with this inexpensive deck.

So, I ran across this cute lil' number
http://news.harmony-central.com/Newp/2005/X-48.html.

It seems like the cat's meow for a small setup. Have any of you
guys/gals any experience/knowledge about this you can share?

cheers,

jef

<blockquote type="cite">

<pre wrap="">I'm trying to help 2 different fellas put together their home studios. One is a musician who'll be just doing his own stuff and one is a guy switching from a fostex 1" 16track that he's been demoing small acts with. They've both got no clue about the computer world - at all - and digital scares them, so naturally they've been looking at more fostex stuff, like the 24track rackmount.

I don't think this unit will serve either of them very well and will take an additional amount of outboard gear to make it work, effectively cancelling out any savings they'd be getting with this inexpensive deck.

So, I ran across this cute lil' number

<a class="moz-txt-link-freetext"

href="http://news.harmony-central.com/Newp/2005/X-48.html">http://news.harmony-central.com/Newp/2005/X-48.html.

<a class="moz-txt-link-/rfc2396E"

href="http://news.harmony-central.com/Newp/2005/X-48.html"><http://news.harmony-central.com/Newp/2005/X-48.html>

It seems like the cat's meow for a small setup. Have any of you guys/gals any experience/knowledge about this you can share?

cheers,

jef

and a terminator.
2 Mecs and a Layla24/96 Wordclock Sync ??
or with just 2 mecs, do i have to go from mec A out to mec B in
and mec b out to Mec A in with BNC
cause i recorded a whole project at 48KHz and when i use autotune on vocals
which i comped, at 48KHz i have to set the scaletune down about 18-20 cents.

Something wire here and i can't figure it out

Thanks,I believe you could be hearing latency. I'm convinced I can hear that small
a detail, though I seem to hate it more on a track I'm processing than on a
track I'm performing. IOW, my body seems to compensate for it while playing
to it, but my ears hate it when treating pre-recorded tracks.

Swen and I have played extensively with small amounts of nudging, and I
swear the tiniest differences are audible under certain circumstances...

Hi'y Don,

.....ya no doubt...I didn't see anything like that on the tascam site, an
 admittedly superficial browse though...and with the large D-Sub
 connectors I'm assuming the I/O is proprietary, though I'd hope not.

Hi'y Don,

.....ya no doubt...I didn't see anything like that on the tascam site,
an admittedly superficial browse though...and with the large D-Sub
connectors I'm assuming the I/O is proprietary, though I'd hope not.

Agreed... this is always the best route IMO. A typical session/tune =
 with a good player won't have but 10 to 25 Tom hits -- sometimes less -- =
 even with a robust kit. Just ask Rod ;-)

Cujo,
You might consider editing the tom tracks by cutting for a hard gate =
sound
if there aren't too many tom fills to deal with. Might really fit the =
80's bill.

A little reverb (gated?) is usually enough to cover the mess.

-----=_NextPart_000_0011_01C667BE.304CE230--This is for a friend. (No really)

He has a session that has been dumped from 2 inch tape, that includes a SMPTE track, and also has an ADAT that had been synced to that tape and overdubbed on.

Now, in another location he needs to dump the ADAT back in, in sync with the original tracks. With me so far?

I know that a BRC could do this. Unfortunately neither of us has one. Anything else that will read SMPTE and lock up an ADAT? I have a MOTU timepiece AV laying around that I think might do it, but I don't have a manual for it.

Ideas?HA! Usually you would be right, Not the track I'm recording today, however. 2 count'm TWO drum solo's in a single song. Kind of a Jazz fusion track I'm doing for a guy. Toms a'plenty.

I actually have pretty good luck with the analog X gates.
