>Hi Kerry,

I checked out the severth circle stuff, and I would feel comfortable building it. I think that may be the next place I will go after the grace. I've never owned a really, really nice mic pre, and I feel I need something to use as a benchmark to develop my listening skills.

I look forward to hearing your report on the seventh circle modlues. I could see them being on the list for next year sometime.

All the best,

Mikelt will work on the hyperthreading exactly the same way as a multi core. The only issue I had last night was I got 2 blue screens (out of many, many quits) when quitting the PARIS app. While running, I had no troubles at all. I'm almost positive that the driver tried to signal the app after it had closed. I started working on a lock to ensure that can't happen. There may be other issues that come up, but I think we're in the home stretch.

Cheers!

Mike

em yet, I'm just going on word of mouth -
albeit some from folks whose ears I trust. The user buzz is incredible,
and I literally have not found a single word of negativity - or even
"damned with faint praise" -- amongst the pros. The rumour is that
they've got the Neve implementation really right.

The driving factor for me is the bang-for-the-buck. Back in the day
when I was running a little studio we used to use Shawn Pierce's modded

Neve broadcast "bassinet" to front end PARIS recordings and i got used to that Neve magic, and miss it (although I'll be trying some of the other SCA offerings like the C84 "Millennia" clone).

The bassinet came with a lot of problems (there were always one or two flaky channels that needed lovin' up). I probably could have bought it for a few grand and refurbished it, but for a small project facility it's a real challenge to make a purchase like that cost-effective. So I'm really looking forward to having similar sonics but with far greater reliability at a price point I can justify, in a day of scaled-back productions and a producer's facility I have no intention of letting mushroom into A) a full studio with attendant overhead and B) a busy facility that has large amounts of folks tramping in and out of our family bathroom :D

You got it; I'll let you know how it goes on those. I might make the jump sooner rather than later too. Good luck with the Grace, from what I'm hearing it'll make you happy.

- KGreat info, John, thanks! I'll be digging through the weighty cable bin and seeing what I have in there (I'm almost sure I have some Mogami and Canare instrument cable in there). I've already got a bunch of Neutrik ends I can use.

Hi All,

I've got a spin lock in place, and I've yet to crash on exit.

Here are the installation instructions:

the PARIS_StudioControlLibrary.dll goes in the Windows\System32 folder.
be sure to back up the copy your using currently just in case.

The Scherzo.sys goes in Windows\System32\drivers\. Be sure to back up your
current scherzo, too.

Restart Windows and give PARIS a go.

If the testing goes well, this allows PARIS to work on a multicore/hyperthreded
CPU with no special workarounds.

All the best!

Mike

with no hiccups, so far so good.

Mike, lordamercy, is this sort of thing hard to do? Are you taking donations? How many folks need this? I'm making multiple backup copies of your software tweaks if this keeps working, and buying myself another motherboard just like the one I have now just for future-proofing. Now if I can just afford that Magma chassis...

>Well, no hiccups yet. I'm going to push it hard tonight and let you guys know.
But it does feel different, the GUI responds like it did on my old PIII motherboard again.

I'll report back tomorrow. If all goes well, I'm buying some of Mike's plugins.

;) I always thought about bidding on an old DP4 on eBay, but now I don't

have to.

Jimmy

I don't have two ADAT cards to try using two in two MECs at once. But, I worked really hard at getting the ADAT card to work reliably under XP. It works fine with one card in one MEC. I'm sure of that. I also made a lot of changes to the way the PSCL enumerates cards to make sure that it didn't miss anything. My 8 out card would be missed by the PSCL because it took too long to respond, and then the app would innitalize it (because it does everything again - probably because the PSCL wasn't working right and they just worked around it.)

Anyway, donations are certainly welcome. :) It's taken about 6 months to get the PSCL and the scherzo to this point.

I think the next step might be allocating ram at system startup to help those who get the "could not allocate common buffer error." I'm also trying to add some code that will reduce the driver latency, but it won't compile with that in for some reason. I sent an email to Chris to see if he has any ideas as to why.

Next stop is the ASIO driver.

All the best!

Mikel can test that next week, with adat cards across 3 mecs, or hell, why not 4 mecs? I'll test that.

I don't think I have adat sync cables anymore.. I'll have to check. Things are a bit chaotic for the next few days here but things should return to normal after the weekend and I'll be back in Parisland..

Cheers,

TC

isForums/ - all posts on the "theproject" group (including attachments) are already automatically mirrored to the web forums and vice versa (we hope to be tackling the technical issues blocking the syncing of "Main" and "Forsale" soon and opening them up officially).

3) posts that wind up on the web forum allow you the use of extra notification features - like RSS to keep track of updates or - even more directly - emails sent to you every time an update hits.

4) the upload/download functionality of the Web forum works better than my feculently annoying USENET browser's (Unison for Mac OSX) does :D

Mike, thanks from the very bottom of my heart. This is a very big life-changer
for me right now. I was working on such a stable rig for so long, but then
for a while now things have just been so sketchy, and I didn't know why.
Those damn dual processors....I had no idea....

I'll be buying Mike-ish plug-ins first of the week. BTW, that DP/Pro Hall
reverb sounds amazing! That's far better than anything I have on my Kurzweil
Rumour. I'm very excited to be supporting such a kick-ass dude by purchasing
software that makes my life easier anyway!

Did the Ensoniq DP boxes really sound that good? Good lord, where are those
guys today?

Happy Jimmy

Same algorithms, but PARIS has even better converters :)

Here's one of them - John Dattoro -

<http://www.stanford.edu/~dattorro/>

My bad; that's Jon Dattoro, not John, and here's some more DP4 info:

general:

<http://www.stanford.edu/~dattorro/DP4.htm>

manual (pdf):

http://www.stanford.edu/~dattorro/DP4_manual.pdf Thanks so much for the kind words, Jimmy!

Thanks also for beta testing. I'm glad its made the difference. I haven't had any problems with it either. I think we're in good shape. :)

I've compared the dp/pro hall to my MPX1, and the DP/Pro hall is smoother and bigger sounding. Those guys were incredible.

Cheers!

Mike
