>What the hell is evil about giving away product to gain market share. I

bet if you were on the receiving end you wouldn't call it evil. It's

just business. Ever been at a cosmetic counter with your gal? The shit

they give away is unbelievable - I wish to hell Apple or MS would pile

it on like that to me. 'Course the markup on cosmetics, man, that's true

evil, but the ladies don't complain, so suck it up. This kind of ranting

is juvenile. They're just computers, right?

d as to what
a system is capable of. It's not good to assume things. It is explained

that they are running 26 fx plugins with 32 tracks at 96k with a buffer setting of 32 and getting 1.6 millisecond of latency using Logic 7.2.2. If what they are saying is not true somebody should sue them. On the other hand, if somebody assumes that they can run a different version of Logic with a different set up and run virtual instruments, I don't think you can expect to get the same results. Apogee is clear about the set up, however I do think they should have more information and be more clear about the plugins counts. They should separate the maximum plugin count and the latency test, it's a bit confusing.

>Some of you may remember me posting a few months back, looking for someone with a PARIS studio, and maybe a bit of data recovery experience. A gentleman responded to me via email, and I have lost the message. A data recovery person would be fine, but I just thought I would shoot for someone who would be sensitive to my situation, and maybe not charge me 3 grand. If you are the Texan who responded, by all means, tell me!

I sold my entire studio a few years back, and kept only a SCSI drive full of unmixed songs and bits of ideas. The drive spins but will not be detected by windows. i have tried multiple SCSI adapters, booting into Linux, etc. GRUB gives geometry errors. I just want the 30 or so Gigs copied to a SATA drive. It's probably 99% garbage, but there is some stuff that I'm sentimental about buried on there somewhere. i need the whole file structure copied over. It's also important that I don't risk any more (?) damage to the drive.

If anyone is interested, please let me know.

If you are in the Portland, OR area, that would be a huge plus. I could pay a fee up front, and if it works, give you more.

here is some info on the drive

IBM Ultrastar 36Z15 Drive, model# ic35l036ucpr15-0. This is the 36.7 GB, 15,000 RPM unit. (80p ULTRA 3 SCSI)

I had to get an ultra 160 controller
and sca adapter 80 pin to SCSI 3
(with power)

Not sure what you would need. I know jack about SCSI. It may just be a jumper setting, in which case you could make some quick cash. I think it's probably more though. If you are local, know about jumpers, and what all that parity and stuff means, I'd be more than happy to give you 50 bucks to try it out.

coldstatue att geeemail dat commm (first part is correct)

ThanksI don't know if this will help, there are some audio guys in portland that might be able to help you. Justin runs <http://www.audiotalkback.com>, he is in portland and there are some other guys on that news group. Most of those guys are studio owners, they use Pro Tools and other software, but they might be able to transfer your files and they are local.

>Hi Dedric,
Apogee is doing nothing that hasn't been done by RME and Lynx for going

on 3 years now on PC and now on Intel Macs.

If I want a proprietary hardware system I'd just buy Pro Tools and be done with it.

Now that RME and Lynx are starting to release PCI-e cards the Symphony looks less and less attractive.

Not really sure what is good about it. Only thing I could see is it being the first PCI-e card for the MAC.

About the only fair comparison would be between and RME Madi card at 96k and see how it compares against the Symphony numbers.

They both at this point would need to be running Logic 8 on Leopard to be accurate.

I like that Apogee doesn't post the test session on the web site for users to download.

It would be the fair way for people to see what the card can do compared to the card they are using now.

Sorta reminds me of the vague claims Rain Recording made about Vista with nothing to back it up other than Microsoft and Cakewalk press releases.

ADK

chrisl@adkproaudio.com <mailto:chrisl@adkproaudio.com>

www.adkproaudio.com <http://www.adkproaudio.com/>

(859) 635-5762Chris,

Not to get too OT here but my two DAWs are, as you know based on GA-K8Ns Ultra 939's with Opteron 185's. The slave DAW has 2 x HDSP 9652's and is only used for VSTi's and is systemlinked using the full 24 bit path between one of the slave ADAT ports and the Multiface ADAT port. The master DAW has 2 x 13 slot Magmas. One of the Magmas has a Multiface, a MADI and AES 32. the other has 4 x UAD-1's and 2 x POCO's. It so stable I'm in shock. I have had these DAWs online, systemlinked and and working without a single glitch for almost a month without powering down.

Not a crash, not even a hiccup. I've never once seen that happen with a Mac.

How are those new generation Intel Quads? I saw a post by Scott on the Nuendo forum that was pretty high praise. Are they to the point now that I could work at 64k buffers 24/7 with relatively high track counts and use my 32 bit Magma's in a newer compatible mobo with 2 x PCI slots? without having IRQ trainwrecks? The only reason I'd even consider doing this would be to lose the necessity for ADM, though that's really less and less of an issue. Still, it would be nice to just set & forget and be able to use the Cubase CR function full time for OD's if necessary, even when in the process of mixing.

Get my drift? ;o)

>chrisl@adkproaudio.comHi Deej,

With your whacked setup I couldn't tell ya. With those old TC POCOs, Magma and UADs with the 4 and 8 cores machines. Personally I would wait for the UAD-2 card to come out. It will stream line you setup sense it projected to have processing power of 3 current UADs.

The only thing preventing you from working at that buffer now are the UAD and TC cards. The way they function and the impact on the PCI buss

for them and the Magma prevents that low or lower of a buffer.

chrisl@adkproaudio.comhttp://www.memtest.org/Hi John,

Justin Arey and I are good friends, both living in PDX. In fact, we work together at Xerox in Wilsonville.

I spoke with him this morning re: your SCSI issue and he's definitely interested in hearing from you. He's got all the machines necessary and if you can supply the drive, controller and cables, I'm sure he'll be happy to assist.

The email address that James provided is correct.

Best of luck!

Mark

>ThanksI downloaded the firmware update, but when I run the installer it says I must be booted into system 9. It is my understanding that in order to install a bootable system 9, I need the original install disk(s). I have a single install disk, but I've checked several apple forums, and unless I am missing something, the system 9 install stuff must be on a different disk that I don't have. The local Mac store won't sell me a replacement disk(s), but they say they will install system 9 onto my machine for \$45.

Obviously, it would be preferable to have the disk(s) so I can re-install system 9 if/when necessary in the future.

I looked on Ebay, and there is a set of 4 install disks for MDD that is up for sale, which I will try to bid on.

Does anyone have any other ideas on how to get these disks?

Thanks,

Dale

check by going
to system preferences, Start up disk. If there is an OS9 folder in there,
click on it and hit restart. I don't however think this will help you with
OSX freeze ups. I would make an appointment at the Genius bar at your Apple
store and have them look at it.

>Thank you Chris for stating what I have been saying for years now.

All this tech talk :(\$\$\$\$\$\$\$\$\$) about low latency on native solutions, is
very costly AND, I might add, as Thad has said on numerous occasions, have
gained nothing!! due to that fact that we are all beholdng to MS Vista/XP
and OSX..

On the Nuendo.com website 10 mile post on system performance specs is sickening!. Who cares? All, one should want is

A stable running system, that performs the task thats needed.

I'm with the get Protools HD(X) and be done with it. There are those on this and other sites how have sunk major\$\$\$\$ trying to "perice-Mill_ a working DAW hat outperforms ProTools HD. That's cool, but I would these folks have spent "More" money than just buying a super hot-rod ProTools HD6..

Note: Out 2 HD rigs on G5's also run Nuendo(Via Digis Asio drivers)..Runs great, and is as stable as ever. I can mix a 70 track project with alot of plugins on that baby. So, Getting a ProTools HD rig is not 'So Closed" as some here believes.

Back to the subject:

If you were to do a search on Gearsutz on the symphony, yooou'd see that I slammed that card saying that "for a 1k or even 700 dollars, "What am I getting".. No DSP, nothing but a glorified half baked mixer that allows you to play itunes .. Not impressed.

While we're onthe subject, I think RME's total mix should be simplified like Motu's MkIII DSP cue mixer app. Simple, yet very powerful.

Now look at all of us-you who have stayed on the PC/Mac upgrade bandwagon. Spent \$\$\$ major money chasing the zero latency Native dream..Only to run into the win XP/Vista brick wall of doom.. The lie of the 64 bit dream.. Dual core this and that..SHAM!!!

My Win ME Paris (4 card) rig still is as stable as it ever was.

All in all, it's your money, spend it how you may, but one thing is for sure, If are working on a major lable recording, it better be delivered in ProTools.. You want a job working a sudio or media house, you better know Pro Tools..

So, we can sit hear discussing Native torture test wasting time(IMHO) when a vialble solution is already on the market that can be had these days for under 10k..belive it or not.hat yields a very polished sound, very very flexible i/o routing for hardware owners..super low-latency that allows you to track and mixrealtime live sessions..and oh yeah.. Super stable..

So, just look at the reciepts from the last 5 years on or Native Dream journey and add em up. Then, add up all those clients who utter that all familiar phrase" Do you have Pro Tools"?..

I guess it comes down to is his this: Are you in the game or are you not? Simple..

 >That's some deep shit, dude. Enjoyed listening to the samples. By the way,
 since I developed Embochure Dystonia, I have been playing a Synthophone, sax
 midi controller, designed by Martin Hurni, Switzerland. The possibilities
 are really endless with the thing, limited only by the samples you can

trigger and your imagination. So are you triggering the synths, percussion and basses with the Steinerphone. I hear a sax player in there, mostly in the background. Like the Harmon mute, yeah.

Best,
Rich

 >Yo D,

I have to say as a lurker/reader/bystander that I appreciated your post. I find it interesting and appreciated the findings on the current state of native DAW in the real world. Makes me happy I'm not trying to push the envelope with Native, to be honest, and glad I still have Paris around for tracking and mixing, even sans 96k+. If I absolutely gotta have native, I pull up a tascam to dump synths or fire up the Creamware rig. I still feel native has a little ways to go, but seeing what's on the table helps ground me in the reality of the situation, rather than what's been sent to press. Thanks dude. Sorry you felt like an audio post in a (gulp) audio forum brought out the wrath.

9 will work for classic, but to make system 9 bootable, the original disks (set of 4, I think) that came with the MDD must be used.

What I'm wondering is, can these original MDD disks be copied? If not, then I guess I will bid high to try and snag the ones on Ebay.

to "ask".

I also know that my clinic has my records online, because they have a program called "MyChart.com" or something like that where I can review my own lab results, imaging, vitals, etc. I haven't been inspired to check it out, but now that you've brought it up, I think I'll ask next time I see my doctor about security and who has access to that information.

The advantage, of course, is for practitioners to have your health records accessible if you are in a situation where there isn't time for you to give it to them, assuming you're even abl
