SarahWwwwwell, I don't know about the Layla for sure so I'll make an assumption (that will probably cause my foot to fly into my mouth at some point) but I'll take a wild crack at it Kip.

Ok, first things first... you must use a BNC cable of quality going from your MEC a to MEC b.. 'must do this'. Otherwise MEC b bites it on syncing.

From there is where it gets a little cloudy on what you have/are trying to accomplish.

My assumptions are: That you are 48k across the board on all cards, and that the Layla has a S/PDIF input that will accept/slave to external clocking.

That being the case, take the S/PDIF out on the MEC a, and push it (with a quality RCA cable, of course) to the Layla, set the layla for external clock.,. return it to Paris MEC S/PDIF in (routed to place of your choice) and you should be good to go man - if I understand what you're trying to do correctly.

If there is any other hardware, software or purpose in this equation, speak now that my foot is poised for entry :)

AA

I exchanged the Motu 8x8 for the MidiMan MidiSport 8x8.
I will install the drivers tomorrow. This is round two.

I wonder if it would be any faster regarding MIDI latency to
install a MIDI card into my Cubase rig and use the MidiSport as
a stand-alone (no USB connection)? I could then run MTC to Cubase=20
via a MIDI cable. I know I would forfeit 128 Midi channels for 16 by =
doing this. =20
Most of my work I think will be softsynths anyway though.

I know MIDI is slower than USB 2 but something tells me that
there may be something more stable if not even quicker to use
the MIDI line sending MTC into Cubase? I know it would usually be=20
combined with note and controller data from a controller which seems =
like=20
a log jam waiting to happen. =20

I am jaded by my experience with the Motu piece and it's inability to =
deal=20
with sysex and it's flakey software. =20

Wadaya think?
Tom

You have almost finished printing a mix but you know there's another
change to be made. You hit stop in the transport, Alt-Backspace to
delete the mixdown and you make your change. Go to reprint and
an unrelated track is out of line... This happened three times tonight =
in three
different mixes.

I've found that if I was last on an Editor window and a track was =
highlighted
the Alt-Backspace command will undo or at least change the placement
on that track! You start the mix again and there's a new timing =
problem!!!

How unprofessional of me.

Am I the only one?,
Tom

PS I had around 7-8ms latency with rock solid timing with the Amiga, =
MIDI Clock=20
and SMPTE all hardwired. Never any variance. Is this asking too much =
with the
new USB MIDI world? I was expecting better with these newfangled toys. =

But No-o-o-o-o-o-o-o!,
T.

PPS Maybe I should install the drivers first huh?
