>I'm sick of the crackling and popping I'm getting when trying to squeeze the
massive bandwidth used by my 3 x RME cards and 4 x UAD cards through the 32
bit PCI bus. It just ain't happenin' the way I want. Over 40% CPU usage of
the UAD-1's and I'm listening to popcorn.

I've been chatting today with Ric (the obscene) at FX Teleport. I'm going to give this a whirl. I never had any bandwidth problems with my old ASUS A7V8x mobo. This thing is sitting there gathering dust with an XP 3000 CPU and 2 G of RAM. I'm getting ready to order a case with PSU, a floppy and a CDR, 2 x Intel Pro 1000 NIC's Linksys 5-Port EG005W switch, as recommended for this.

Anyone got any words to the wise? I'm assuming that Cubase SX delay compensation should work.....yeah, right!!!!

;o)http://aclu.org/pizza/images/screen.swfhehe... I thought of that as I sold someone a 602A today.

Fortunately there's a backup machine in waiting...

Cheers,

Kim.Ha ha Yeah the day I sold my 24 channel Behringer desk was a very good day.

Not for the guy who bought it.

s like

they're going to start getting the mutli-core, low power/temperature gospel
about a year from now.

TCBI've used the (free) voxengo tempo delay for a while. Really cool device,
IMHO, and to be a little less humble I think I know a little more about delays
than average.

<http://www.voxengo.com/product/tempodelay/>

As a guy who learned on tape, mixer, patch bay and splicing block,
PARIS seems to have a million features, but I know there are apps
with way more out there.

I used to say: "there are 2 things in audio, cheap talk and what's on tape" and it is still true. Anyone who can't make a great record with PARIS, should go into some other line of work.

Actually we should all go into some other line of work... For the number of skills any decent engineer possesses, we should make a minimum of 100K a year.

grrrr

<http://doncicchetti.blogspot.com/Hey all>,

Say, any of you folks in the Nashville (or other) area know anyone

that could send me a copy of Otari DiskMixII (DOS) software?? We sold our JH-636 and the only copy I have is on 5 1/4" floppy!

Thanks,

David.I dunno.....I had a UAD-1 card fry the other day. In fact, this is the thrid UAD-1 card since 2001 that has given up.

Because you can always hear the need for reverb in a very pristine
dry mix, but often you cannot hear what is wrong with a wet one.

I go to the compressor (lightly) as soon as the basic EQ is dialed
in. The compressor will often affect the EQ needs, but I always get
the EQ right first, rather than trying to EQ through the compressor
artifacts which change with the settings.

I also tell the students to learn it my way and then improve on it
if they can. It gives them the opportunity to really hear stereo
placement, the impact of slight level changes on the overall mix
and complementary EQ curves before the FX can bugger these
things up. Remember, I do rock, not hip-hop (I did do one rap
record tho...) so your mileage may vary.

I've done a bunch of rock tracks too, but they probably are a bit on the bombastic side.

Besides, I have no idea what I'm doing.

It's all ears and customers. Your ear for music and use of gear makes customer pull out the wallet. There is no other measure of success that matters.

Talk about bombast... I have a track on the current project that is a huge chant thing with the audience involved. We are double tracking all over the place and when we are done, it should sound like 10,000 very loud people yelling at the top of their lungs.

Can't wait to mix it.

Well I definitely have no idea what I'm doing. Music for me occupies a place that has nothing to do with money. God bless you guys that make a living at it though... obviously if thats your goal it definitely would result in higher quality product. I disagree there is no other measure of success that matters.

nice.. you gotta let me listen to your rap tracks :)

this is how I make my living, and I love making the customer pull out the wallet for this: <http://bigdigtech.com>.....as in indispensable.....once you've used it.

http://www.jrrshop.com/product_info.php?products_id=6087&

;osCsid=601872369631efb3692bb2d31b6b7719Well, the manual is wrong and

Slot 1 has its IRQ tied to the onboard Audio card

Slot 2 has its IRQ tied to the AGP slot

Slot 3 has it's slot FREE

The manual says Slot 1 is AGP and Slot 3 is audio but it is wrong. I put 1 eds card in each slot and booted up to see what device it bound to the same IRQ as the EDS card. Crazy.

So here's the fix

Put EDS cards (2) in slots 1 and 3

So for my win98se install here's how I set the bios

Slot 1 to IRQ 3

Slot 3 to IRQ 3

PNP OS No

PCI IRQ Resource Exclusion

IRQ 3 YES

I also turned off floppy, usb, serial, parallel ports and onboard video (just using agp).

I have Lan, onboard sound, AGP and 2 eds cards.

So far I was able to play back an mp3 in windows media player WHILE playing back and tracking in paris (as a test). I think the onboard audio card will stay out of the way (I hope).

Rock on, we'll see.

JohnIn case anyone wants a nice setup for display in win98se paris, you can do 1600x1200 on a samsung 304B 20.1" display and get 16 channels, 2 aux, submix master with graphic, eq, eds effects, native effects, grouping and a couple of aux channels to all fit in one mix window.

Similarly the editor and automation windows are a very nice size now.

plus the 1600x1200 works in both win98 and xp for those going back and forth.

about \$500 for the display with 3 year warranty, \$450 for 1 year.

enjoyDamn!!!! I need 5 of these.....why don't computers have 5 x firewire ports?

Actually, this looks very cool, and the price is certainly attractive.

;oP

Sintefex eqs are also good as are the TriTones and Waves Q-Clone, but the ones in Liquid C are not convolution, so no indication of what the new box may sound like.

If it sounds great I will be excited. It is a very low price point.

GeneInteresting that this info isn't on the Focusrite site at all...

David.

>>> Another thing you can do, if you're into spending \$\$\$ is find a Sony
DPS-V77, install it in your rack and then call up the drum room preset on an
aux. This thing absolutely *KILLS*. I use it on my drum submix and it's
similar in many ways to strapping a UAD-1 Fairchild across a drum submix.
Absolutely huge sound on whatever tracks you send to the aux and how much
you send to the V77.

>If it's any help, one of the tests I'll use to burn in a set up is to put it
in loop and walk away from it for a day or two with a decent amount of
tracks... that number will vary depending on how many EDS cards you have. I
usually do something like 28 ish on a 3 card set up. After that has been
established, I'll drop in a load of tracks and wildman punch in/out at
random on say, 20 or so tracks. Always use medium or long punch in in the
project setup, short never is reliable on any rig I've set up past 1 EDS
anyway. I shoot for medium, personally.

> 465 km (290 miles) SW of SALEM, OregonI need a decent AD/DA to use to patch in to a pair of s/pdif I/O in one of

my RMWE cards so I can add a couple more analog processers in Cubase SX during mixdown.. The name of this box gives me pause. The manufacturer makes pretty decent gear as far as I know. I have a keyboard controller and a couple of M-Audio format converters that are doing a good job around here. Anyone have one of these Cows or have experience with one?

Thanks,

DeejMan!!! I'm getting 1 or 2
