TyroneHI James,

Hope it doesn't suffer from the same performance and drivers problems as the other models. The Mic-Pre on the other units sound fricking great and these are supposedly better. Hope software side doesn't kill it.

He is working towards recovery, but despite the illness, he completed his CD "After Tonight". I am truly in awe of his fortitude!

The single was release this week and was #1 most added across the country. I had the great opportunity to work with Will in his completion of this effort.

Anyway, it's a really natural, mellow/etherial sound if you can look up & use those kind of materials... some of it might be hard to find (turtle shells), and some if it will take some preparation.... ok, so you didn't say "easy-to-make" homemade instruments.

Seriously, look into it... might be interesting to you, depending on the style of sound you're going for.

Is there any reason why XP might cause this? Is it a WinXP issue? or do the cards just die like that? I remember mention of the daughter boards going.
