>Hi Aaron,

Thanks so much for your help with this!

I have 2 cards, but only 1 MEC and c16 attached. I'd really love to hear if the code works with more C16s and MECs/442s. I think it will because I

---=_linux4899de24--I see that HC has added a new member to its video team: Aaron Allen. If this is the AA of this newsgroup, CONGRATS Aaron! Impressive.
EdnaHey Mike,

I would start Cubase after Paris anyway in my dual platform setup. Would this solve the problem since the app with MIDI isn't running yet?

> MikeHi,

I have make some good tests with the variable compressor and deesser and found that there are many artifacts due probably to the release knob.

There is not a way to make a good sounding deessing without hearing bubbling distortion.

The variable compressor has a great sounding RMS switch !

But again the HOLD makes things worse with distortion artifacts.

Again the release for short to medium release times for a good compression you always get these artifacts.

I am sure by using this great sounding RMS switch and finding a better release
resonse to overcome these distortion then these compressors would be killer
!!!!

Please take all these comments as caring points for your work and for us
the users.

I would love to see these plugins develop.

I will still support you even with newer versions of the plugins I have bought.

Didn't I buy them all ??

The plugin you have sent to test dc really I see no more DC than Paris gates
!!

Please jote that most mono band compressor and multiband compressors have
the same dc problems.

So now you found a cure you could update those too.

I think also the the EQ4 but not really sure will check.

The metronome is a brilliant idea and great product you made !

Regards,

DimitriosDear Mike,

Could you please add the knob RMS to paris stock compressors ???

Maybe just make RMS versions of it without having the switch so they can
be light on dsp and anyway we can load just the appropriate compressor needed
either the EDSCompressor_RMS or EDSCompressor_PEAK

Thanks gain !!

Dimitrios

>DimitriosIf this were the only restriction on use (apps needing to be booted in a
particular sequence) ReWire forces exactly the same behaviour for different
reasons - anyone ReWiring apps together learns to live with that restriction
in the first lesson. So to me that's a total non-issue; perhaps you're
worried about some other implication of this discovery?

All the time. Vista business 64 Service pack 1. Uses only a little bit more CPU with the audio programs than XP did.

Uses more ram obviously than XP does but of course it does things differently than XP does.

8 gig of ram

3x uad cards

fireface 800 128 buffer all the time with UADs. I can set it lower when not using Uads.

Works great and i use it for gaming and internet stuff!!!!

chrisl@adkproaudio.comI have been playing with reaper on a firepod with this laptop. No problems

here. Not serious production by any means :-)

I know that most of you probably don't go through greatidea.com/paris anymore, but judging by stats a number of folks still do.

It's been SOLD, or should I say UNDER CONTRACT :-)

Chuckdon't you hate youtube videos that don't have any video ?Nice to see you, Chuck - got time to give us an update on what you've been up to?

I've set up multiple soft synths, some from Logic, some from Native Instruments and a few others, switching between them by walking down the tracks in Logic.

So far so good at rehearsals. It's cool to have such a choice of great soft synths and samplers to best set up any type of sound, and still have very portable keyboard rig.

B4 just ROCKS to have live, as does Logic's modeler-based clav.

Cheers,

-Jamie

www.JamieKrutz.com Nice, Jamie. Have you tried out MainStage yet as a virtual instrument host?

I've experimented with MainStage a bit. It's even more flexible as a soft synth host than Logic.

But I know Logic like the back of my hand and I had a couple of problems with MainStage - which could have been user error but I don't have time to troubleshoot right now so I'm going with what I know. I'll certainly give MainStage another shot in the future.

There is one big advantage to using Logic for this, I can easily record and save any musical ideas I get while I'm practicing.

Cheers,
-Jamie

Good advice, Aaron. I do have one I could bring, kinda heavy though.

But since the laptop has its own battery backup, maybe all I need is a
surge protector. It's grid power at Red Rocks.

I'll probably throw the UPS in the car just in case...

Cheers,

>That's cool, Derek is a pioneer! :^)

I've been running softsynths (for recording but not live performance)
since I got my dual G4 PowerMac, now long gone. And on my last laptop, a
G4 PowerBook.

The softsynths work especially well with the crunching power of my
current dual G5, and now on this MacBook Pro, which is in that league
but much more portable. In the meantime, all the software is a couple
revs more advanced, so it's all come together nicely.

Every dedicated keyboard I've had, synth, sampler or rompler, has had
compromises in architecture with resulting programming limitations. But
with the laptop setup, if one softsynth is too limited for a particular
sound, I can just run a different one. It's very freeing from a sound
design perspective.

OTOH, now I have to manage how the controller keyboard interacts with
all these softsynths (mine has lots of controls available). It's yet
another level of programming. With flexibility and power comes a bit of
work. :^)

Cheers,
-Jamie

congratulations on the gig. Sounds like fun!

This is remotely related -- I'm playing a wedding Friday out in a field --
no power at all -- and both my friend the singer/guitarist and I will be
using our battery packs and inverters. Maybe one of those might be handy
for just such a situation.

We've gone for three hours straight before without any problems. We're each
running only 60 watts or so.

ADK Pro Audio
(859) 635-5762
www.adkproaudio.com
chrisl@adkproaudio.comHi Thad,
All current programs work in Vista. I don't have any trouble running audio apps in Vista 64.
Drivers are the big thing. Luckily all my stuff has great Vista drivers.
USB Midi is a big problem right now. Not many devices have 64 bit drivers.
Only MOTU and companies that use the USB Audio Device generic drivers will work.

Sonar is the last program on earth I would for anything but thats just me. :)

Cubase 4 32 and or 64 bit work great. So does Samplitude, Reaper, Saw. Ableton is a bit weird
on it though.
But I think it is the way the current Ableton handles multi-core and how it talks to ASIO thats
causing it.

The 64 bit version of Sonar and Cubase are still buggy.
But only because they have to run the 32bit emulation crap sense so many of the plug-in developers are dragging their feet.

Chris

Very cool!

I've never done a gig just using batteries but I've done them off of generators and HAVE had problems with that. For example, I lost all the patches in a keyboard to a power surge at one gig. Which actually felt lucky because at first I thought the keyboard was fried completely.

This gig will use regular grid power. It's a large band complete with horn section and there will be a huge sound system, flown line arrays, to fill Red Rocks Amphitheater.

Cheers,
-Jamie Krutz

Cool thing is you can install Vista 64 without a product key and extend the activation time to 120days if needed.

Unlike XP you can actually get all the windows update stuff without activating it.

Here is the web site you want to go to for Vista tips that actually work.

www.tweakhound.com

His XP page kicks butt too but you already know all that stuff.

ADK Pro Audio

(859) 635-5762

www.adkproaudio.com

chrisl@adkproaudio.comHI Jamie,

There is a war and Intel won. Know both Microsoft and Apple get to suffer under the jack boots of the Purple Spacemen.

Chris

chrisl@adkproaudio.comYep, Intel won. This Intel MacBook Pro is G5-worthy. :^)

So if you're Andy Grove, what do you do next?

<http://www.theautochannel.com/news/2008/08/03/095241.html>

Cheers,

-Jamie

www.JamieKrutz.com

PS. Not planning to run Vista on the MacBook... ;^)

I'll see what I can do about the release settings.

The driver's got me loosing sleep at the moment!

All the best,

Mike

Holy crap! Running Cakewalk in the background seems to tie up a ton of CPU cycles, and it completely through off the timing of the PSCL. It had me scared for a while.

Anyway, I barely slept last night, but it is fixed. Along the way, I made some threadsafe improvements to the code that initializes MEC modules. I also had to update the ADAT driver to get it to load with Cakewalk tying up CPU cycles. There is a debug version in the zip file for anyone who is trying to run this on a dual CPU machine. I also made the code that detects the clock source during startup more reliable.

Anyway, the code seems to be a lot more robust. If you're having trouble getting multiple adat cards to load, give this a try.

All the best!

Mike

---=_linux489b2867--Hi all. The plans for my current PARIS-based DAW system weren't *really* supposed to kick into gear until I opened the studio doors in January. But given all of Mike's progress I'm champing at the bit to make the jump now, to install PARIS on a PC - even a rudimentary, low-cost PC - and worry about a final rig later after the inevitable studio setup costs are sorted out. I can transfer the PC experience I've gained directly into decisions about a new rig later.

Which brings me to this ad in my local Craigslist - what do you think for \$150?

17" LG studioworks E700B CRT Monitor
17" 777B Case W/400W
LG 16DVD/32x10x40 Combo
AMD Athlon 2200XP (1.83Mghz)
1GB DDR400 PC3200
64MB MSI GeForce4 MX440 w/TVout
asus A7N8X nvidia nforce 2 ultra 400
seagate 250GB HD 7200RPM 8MB Buffer
labtec pc webcam
1.44 floppy drive

[I know I'd put in a beefier PSU right away, and sooner or later replace the video card with a dual-head of some description. I'd eventually get rid of the monitor, get a dual-head KVM switcher (ironically even the cheapest dual-head switchers seem to cost more than this computer) and share my Mac's keyboard, mouse and twin 19" LCDs so both can be accessed with a button-push.]

So is this a sensible low-cost way get me up and running, and in the PARIS PC game?

- KerryMike, you're on fire. Thanks for your incredible work.

My only suggestion is that Windows XP's file caching system is flawed and works a lot better with 1.5 GB+ of RAM. It's designed for file serving, and it will cache files using up to 1GB of RAM, even if it means swapping out program code (like the PARIS app) to do it. I found PARIS bogged down because of this after a little while of use. At 2GB, it's not a problem.

I hope this helps.

You also need to make sure that you by the ram in pairs so that ram operates in dual channel
mode.
So 2x 1 gig DDR400 PC3200 ram is what you will need.

chrisl@adkproaudio.comKerry,

This is essentially what I am running, with a widescreen Geforce dual video card, 2GB of memory and second DVI monitor on PARIS 3. It works great with the one EDS card system I have.

 I may be way off, but Won't this (2x1G DC mode) only be an effective, though
 faster, one Gig memory?

No doubt. :^)

I'm glad to see he's now working on energy issues. Check the link at <http://www.theautochannel.com/news/2008/08/03/095241.html> - it's a speech he gave at the plug-in vehicle conference. It's good to see people with his type of experience and knowledge getting involved.

Cheers,

-Jamie

>Break a leg, Jamie. I've been using a laptop live for a few years now and can't believe I was so uptight about it. The only problems I've run into are some grounding noise issues, but that's not rocket science to fix.

I use a crap Acer \$500 dual core laptop with a crap version of XP on it and Live as the host.

Hope it's a great show,

TCB

It's encouraging to hear going live with a laptop has been working well for you.

Cheers,
-Jamie
